CHANGE LOG

This section documents significant changes from previous versions of the FCM630A user manuals. Only major new features or major document updates are listed here. Minor updates for corrections or editing are not documented here.

Firmware Version 1.0.9.11

- Added Support for import/export Zero Config. [Figure 56: Global Policy Categories]
- Added support for Custom time supplement time conditions. [Time Condition]
- Added support for Call Restriction. [RESTRICT CALLS]
- Added support for Queue Metrics. [QUEUE METRICS]
- Added support for CDR API add whitelist. [Permitted IP (s)]
- Added support for Call queue satisfaction survey. [Queue satisfaction statistics][Agent satisfactionstatistics].
- The old API Configuration is reopened for use. [HTTPS API Settings (Old)]
- Custom permissions support the function of deleting CDR and recording files. [delete CDR andrecording files]
- Added support to adjust recording file storage path. [File Storage Management]
- High Availability feature on FCM630A series. [HA]
- Paging/Intercom supports delayed paging. [Delayed Paging]
- Support LDAP to automatically update the phone book. [LDAP Automatic Update Cycle]
- Support meeting room automatic gain control. [Meeting AGC]

Firmware Version 1.0.9.10

- This is the initial version.

WELCOME

Thank you for purchasing FIBERME FCM630A series IP PBX appliance. The FCM630A series allows businesses to build powerful and scalable unified communication and collaboration solutions. This series of IP PBXs provide a platform that unifies all business communication on one centralized network, including voice, video calling, voice meeting, web meetings, data, analytics, mobility, facility access, intercoms and more. The FCM630A supports up to 250 users and includes a built-in web meetings and meeting solution that allows employees to connect from the desktop, mobile, and IP phones. It can be paired with the FCM630A ecosystem to offer a hybrid platform that combines the control of an on-premises IP PBX. The FCM630A ecosystem consists of the any sip client app for desktop and mobile, By offering a high-end unified-communications and collaboration solution packed with a suite of mobility, security, meeting and collaboration tools, the FCM630A series provides a powerful platform for any organization. The FCM630A supports 1 x ARM Cortex-A53 Quad-Core CPU and 2GB of memory.

Caution:

Changes or modifications to this product not expressly approved by FIBERME, or operation of this product in any way other than as detailed by this User Manual, could void your manufacturer warranty.

Warning:

Please do not use a different power adaptor with the FCM630A as it may cause damage to the product and void the manufacturer warranty.

This document is subject to change without notice. The latest electronic version of this user manual is available for download here:

<https://www.fiberme.com/resources>

Reproduction or transmittal of the entire or any part, in any form or by any means, electronic or print, for any purpose without the express written permission of FIBERME Communications, LLC. is not permitted.

PRODUCT OVERVIEW

Technical Specifications

The following table resumes all the technical specifications including the protocols / standards supported, voicecodecs, telephony features, languages, and upgrade/provisioning settings for FCM630A.

Table 1: Technical Specifications

Interfaces	
Network Interfaces	Three self-adaptive Gigabit ports (switched, routed or dual card mode) with PoE+
NAT Router	Yes (supports router mode and switch mode)
Peripheral Ports	USB 3.0, and SD card interface

LCD Display	320*240 LCD with touch screen for Shortcut Keys and Scroll Bar
Reset Switch	Yes, long press for factory reset and short press for reboot
Voice Capabilities	
Voice-over-Packet Capabilities	LEC with NLP Packetized Voice Protocol Unit, 128ms-tail-length carrier grade Line Echo Cancellation, Dynamic Jitter Buffer, Modem detection & auto-switch to G.711, NetEQ, FEC 2.0, jitter resilience up to 50% audio packet loss
Voice and Fax Codecs	Opus, G.711 A-law/U-law, G.722, G722.1 G722.1C, G.723.1 5.3K/6.3K, G.726-32, G.729A/B, iLBC, GSM; T.38
QoS	Layer 2 QoS (802.1Q, 802.1p) and Layer 3 (ToS, DiffServ, MPLS) QoS
Signaling and Control	
DTMF Methods	Inband, RFC4733, and SIP INFO
Provisioning Protocol and Plug-and-Play	Mass provisioning using AES encrypted XML configuration file, auto-discovery & auto-provisioning of FIBERME IP endpoints via ZeroConfig (DHCP Option 66 multicast SIP SUBSCRIBE mDNS), eventlist between local and remote trunk
Network Protocols	TCP/UDP/IP, RTP/RTCP, ICMP, ARP, DNS, DDNS, DHCP, NTP, TFTP, SSH, HTTP/HTTPS, PPPoE, STUN, SRTP, TLS, LDAP, HDLC, HDLC-ETH, PPP, Frame Relay (pending), IPv6, OpenVPN®
API	Full API available for third-party platform and application integration
Disconnect Methods	Busy/Congestion/Howl Tone, Polarity Reversal, Hook Flash Timing, Loop Current Disconnect
Security	
Media Encryption	SRTP, TLS1.2, HTTPS, SSH, 802.1x
Physical	
Universal Power Supply	Input: 100 ~ 240VAC, 50/60Hz; Output: DC+12V, 1.5A

Dimensions	<ul style="list-style-type: none"> 270mm(L) x 175mm(W) x 36mm(H)
Environmental	<ul style="list-style-type: none"> Operating: 32 - 113°F / 0 ~ 45°C, Humidity 10 - 90% (non-condensing) Storage: 14 - 140°F / -10 ~ 60°C, Humidity 10 - 90% (non-condensing)
Mounting	<ul style="list-style-type: none"> Wall mount (Unit will be fixed on the wall using screw) & Desktop
Weight	<ul style="list-style-type: none"> FCM630A: Unit weight 705g, Package weight 1200g
Additional Features	
Multi-language Support	<ul style="list-style-type: none"> Web UI: English, Simplified Chinese, Traditional Chinese, Spanish, French, Portuguese, German, Russian, Italian, Polish, Czech, Turkish Customizable IVR/voice prompts: English, Chinese, British English, German, Spanish, Greek, French, Italian, Dutch, Polish, Portuguese, Russian, Swedish, Turkish, Hebrew, Arabic, Netherlands Customizable language pack to support any other languages
Caller ID	Bellcore/Telcordia, ETSI-FSK, ETSI-DTMF, SIN 227 – BT, NTT
Polarity Reversal/ Wink	Yes, with enable/disable option upon call establishment and termination
Call Center	Multiple configurable call queues, automatic call distribution (ACD) based on agent skills/availability/workload, in-queue announcement
Customizable Auto attendant	Up to 5 layers of IVR (Interactive Voice Response) in multiple languages

Telephony Operating System	Based on Asterisk version 16
Maximum Call Capacity	FCM630A: <ul style="list-style-type: none"> • Users: 250 • Concurrent calls (G.711): 50 • Max concurrent SRTP calls (G.711): 50
Maximum Attendees of Meeting Bridges	FCM630A: 3 Meeting rooms and up to 50 parties

Call Features	Call park, call forward, call transfer, call waiting, caller ID, call record, call history, ringtone, IVR, music on hold, call routes, DID, DOD, DND, DISA, ring group, ring simultaneously, time schedule, PIN groups, call queue, pickup group, paging/intercom, voicemail, call wakeup, SCA, BLF, voicemail to email, speed dial, call back, dial by name, emergency call, call follow me, blacklist/whitelist, voice meeting, event list, feature codes, busy camp-on/ call completion, voice control
Mobile App	Compatible with any SIP Softphone on Android & iOS
Compliance	<ul style="list-style-type: none"> • FCC: Part 15 (CFR 47) • CE: EN 55032, EN 55035, EN61000-3-2, EN61000-3-3, EN 62368.1, ES 203 021, ITU K.21 • IC: ICES-003, CS-03 Part I Issue 9 • RCM: AS/NZS CISPR 32, AS/NZS 62368.1, AS/CA S002, AS/CA S003.1/.2 • Power adapter: UL 60950-1 or UL 62368-1

INSTALLATION

Before deploying and configuring the FCM630A series, the device needs to be properly powered up and connected to a network. This section describes detailed information on installation, connection, and warranty policy of the FCM630A.

Equipment Packaging

Table 2: FCM630A Equipment Packaging

Main Case	1
Power Adaptor	1
Ethernet Cable	1
Quick Installation Guide	1

FCM630A front and back view

Figure 1: FCM630A Back View

Figure 2: FCM630A Front View

Safety Compliances

The FCM630A series IP PBX complies with FCC/CE and various safety standards. The FCM630A power adapter is compliant with the UL standard. Use the universal power adapter provided with the FCM630A package only. The manufacturer's warranty does not cover damages to the device caused by unsupported poweradapters.

Warranty

If the FCM630A series IP PBX was purchased from a reseller, please contact the company where the device was purchased for replacement, repair, or refund. If the device was purchased directly from FIBERME, contact our Technical Support Team for an RMA (Return Materials Authorization) number before the product is returned. FIBERME reserves the right to remedy warranty policy without prior notification.

 **Warning:**

Use the power adapter provided with the FCM630A series IP PBX. Do not use a different power adapter as this may damage the device. This type of damage is not covered under warranty.

GETTING STARTED

To get started with the FCM630A setup process, use the following available interfaces: LCD display, and webportal.

- The LCD display shows hardware, software, interface status and network information and can be navigated via the Slide control and Touch keys. From here, users can configure basic network settings, run diagnostic tests, and factory reset.
- The web portal (may also be referred to as web UI in this guide) is the primary method of configuring the FCM.

This section will provide step-by-step instructions on how to use these interfaces to quickly set up the FCM and start making and receiving calls with it.

Use the LCD Menu

- **Idle Screen**

Once the device has booted up completely, the LCD will show the FCM model, hardware version and IP address. Upon menu key press timeout (30 seconds), the screen will default back to this information.

- **Menu**

Pressing the Home button will show the main menu. All available menu options are found in [Table 3: LCD Menu Options].

- **Menu Navigation**

Scrolling down using slide control through the menu options. Press the OK button to select an option.

- **Exit**

Selecting the Back option will return to the previous menu. For the Device Info, Network Info, and Web Info screens that have no Back option, pressing the OK button will return to the previous menu.

- **LCD Backlight**

The LCD backlight will turn on upon button press and will go off when idle for 30 seconds.

The following table summarizes the layout of the LCD menu of FCM630A.

Table 3: LCD Menu Options

View Events	<ul style="list-style-type: none"> • Critical Events • Other Events
Device Info	<ul style="list-style-type: none"> • Hardware: Hardware version number • Software: Software version number • P/N: Part number • WAN MAC: WAN side MAC address • LAN MAC: LAN side MAC address • Uptime: System uptime
Network Info	<ul style="list-style-type: none"> • WAN Mode: DHCP, Static IP, or PPPoE • WAN IP: IP address • WAN Subnet Mask • LAN IP: IP address • LAN Subnet Mask
Network Menu	<ul style="list-style-type: none"> • WAN Mode: Select WAN mode as DHCP, Static IP or PPPoE • Static Route Reset: Select this to reset static route settings.
Factory Menu	<ul style="list-style-type: none"> • Reboot • Factory Reset • LCD Test Patterns Press DOWN and OK buttons to scroll through and select different LCD patterns to test. Once a test is done, press the OK button to return to the previous menu. • Fan Mode Select Auto or On. • LED Test Patterns All On, All Off, and Blinking are the available options. Selecting Back in the menu will revert the LED indicators back to their actual status. • RTC Test Patterns

	<p>Select either 2022-02-22 22:22 or 2011-01-11 11:11 to start the RTC (Real-Time Clock) test pattern. Check the system time from either the LCD idle screen or in the web portal System Status→System Information→General page. To revert back to the correct time, manually reboot the device.</p> <ul style="list-style-type: none"> • Hardware Testing Select Test SVIP to verify hardware connections within the device. The result will display on the LCD when the test is complete.
Web Info	<ul style="list-style-type: none"> • Protocol: Web access protocol (HTTP/ HTTPS). HTTPS is used by default. • Port: Web access port number, which is 8089 by default.
SSH Switch	<ul style="list-style-type: none"> • Enable SSH • Disable SSH <p>SSH access is disabled by default</p>

Use the LED Indicators

The FCM630A LED indicators on the network port to display connection status and the following picture shows the other ports status.

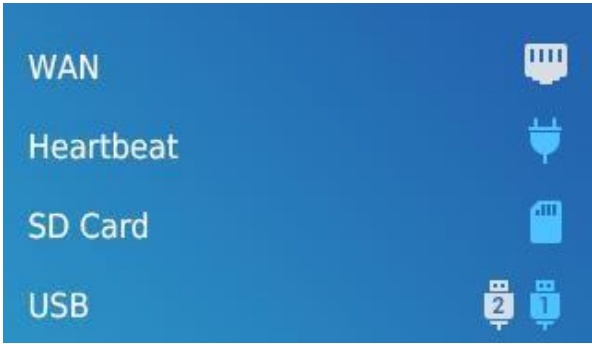

Figure 3: Ports Status

Using the Web UI

Accessing the Web UI

The FCM's web server responds to HTTP/HTTPS GET/POST requests. Embedded HTML pages allow users to configure the device through a web browser such as Microsoft IE (version 8+), Mozilla Firefox, Google Chrome, etc. To access the FCM's web portal, follow the steps below:

Figure 4: FCM630A Web GUI Login Page

1. Make sure your computer is on the same network as the FCM.
2. Make sure that the FCM's IP address is displayed on its LCD.
3. Enter the FCM's IP address into a web browsers' address bar. The login page should appear (pleasesee the above image).
4. Enter default administrator username "admin" and password can be found on the sticker at the back ofthe FCM.

Note:

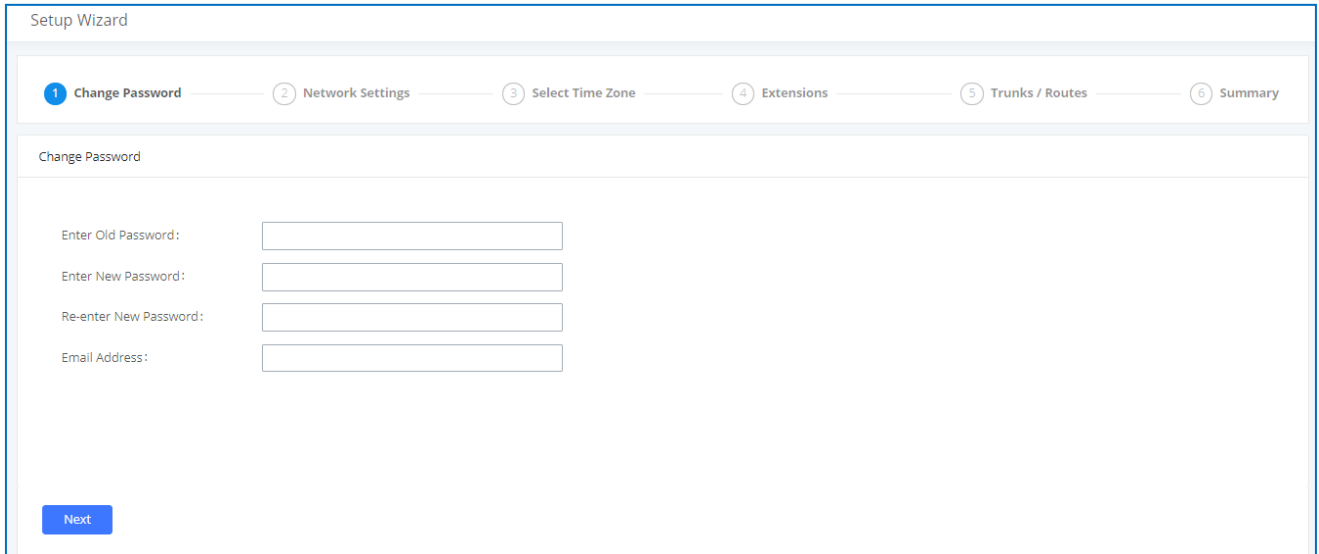

By default, the FCM630A has Redirect From Port 80 enabled. As such, if users type in the FCM630A IP address in the web browser, the web page will be automatically redirected to the page using HTTPS and port 8089. For example, if the LCD shows 192.168.40.167, and 192.168.40.167 is entered into the web browser, theweb page will be redirected to: <https://192.168.40.167:8089>

The option Redirect From Port 80 can be found under the FCM630A Web GUI→System Settings→HTTP Server.

Setup Wizard

After logging into the FCM web portal for the first time, the setup wizard will guide the user through basic configurations such as time zone, network settings, trunks, and routing rules.

The screenshot shows the 'Setup Wizard' interface. At the top, a progress bar indicates six steps: 1. Change Password (active), 2. Network Settings, 3. Select Time Zone, 4. Extensions, 5. Trunks / Routes, and 6. Summary. Below the progress bar, the 'Change Password' section contains four input fields: 'Enter Old Password:', 'Enter New Password:', 'Re-enter New Password:', and 'Email Address:'. A blue 'Next' button is located at the bottom left of the form.

Figure 5: FCM630A Setup Wizard

The setup wizard can be closed and reopened at any time. At the end of the wizard, a summary of the pending configuration changes can be reviewed before applying them.

Main Settings

There are 8 main sections in the web portal to manage various features of the FCM.

- **System Status:** Displays the dashboard, system information, current active calls, and network status.
- **Extensions/Trunks:** Manages extensions, trunks, and routing rules.
- **Call Features:** Manages various features of the FCM such as the IVR and voicemail.
- **PBX Settings:** Manages the settings related to PBX functionality such as SIP settings and interface settings.
- **System Settings:** Manages the settings related to the FCM system itself such as network and security settings.

- **CDR:** Contains the call detail records, statistics, and audio recordings of calls processed by the FCM.
- **Value-Added Features:** Manages the settings of features unrelated to core PBX functionality such as ZeroConfig provisioning and CRM/PMS integrations.
- **Maintenance:** Manages settings and logs related to system management and maintenance such as user management, activity logs, backup settings, upgrade settings and troubleshooting tools.

Web GUI Languages

Currently the FCM630A series Web GUI supports **English, Simplified Chinese, Traditional Chinese, Spanish, French, Portuguese, Russian, Italian, Polish, German etc.**

Users can select the FCM's web UI display language in the top-right corner of the page.

Figure 6: FCM630A Web GUI Language

Web GUI Search Bar

Users can search for options in the web portal with the search bar on the top right of the page.

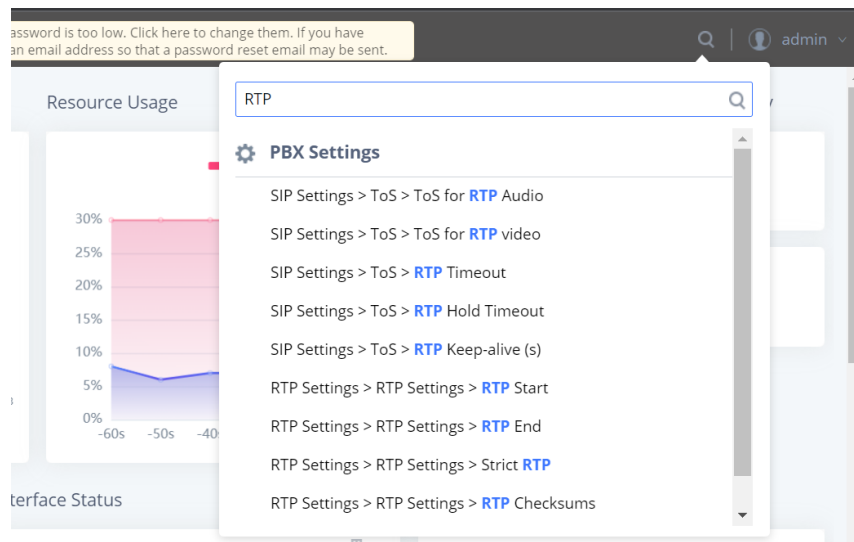

Figure 7: Web GUI Search Bar

Saving and Applying Changes

After making changes to a page, click on the "Save" button to save them and then the "Apply Changes" button that finalizes the changes. If a modification requires a reboot, a prompt will appear asking to reboot the device.

Setting Up an Extension

Power on the FCM630A and your SIP endpoint. Connect both devices to the same network and follow the steps below to set up an extension.

1. Log into the FCM web portal and navigate to **Extension/Trunk** → **Extensions**
2. Click on the "Add" button to start creating a new extension. The Extension and SIP/IAX Password information will be used to register to this extension. To set up voicemail, the Voicemail Password will be required.
3. To register an endpoint to this extension, go into your endpoint's web UI and edit the desired account. Enter the newly created extension's number, SIP user ID, and password into their corresponding fields on the endpoint. Enter the FCM's IP address into the SIP server field. If setting up voicemail, enter *97 into the Voice Mail Access Number field. This field may be named differently on other devices.
4. To access the extension's voicemail, use the newly registered extension to dial *97 and access the personal voicemail system. Once prompted, enter the voicemail password. If successful, you will now be prompted with various voicemail options.
5. You have now set up an extension on an endpoint.

SYSTEM SETTINGS

This section will explain the available system-wide parameters and configuration options on the FCM630A series. This includes settings for the following items: General Settings, HTTP server, network Settings, OpenVPN, DDNS Settings, Security Settings, LDAP server, Time settings, Email settings and TR-069.

General Settings

System administrators can prevent the FCM from making calls and/or writing to the data partition (e.g., CDR, recordings, etc.) once the system reaches a specified threshold of storage usage and CPU usage respectively. These options are located in the System Settings → General Settings page.

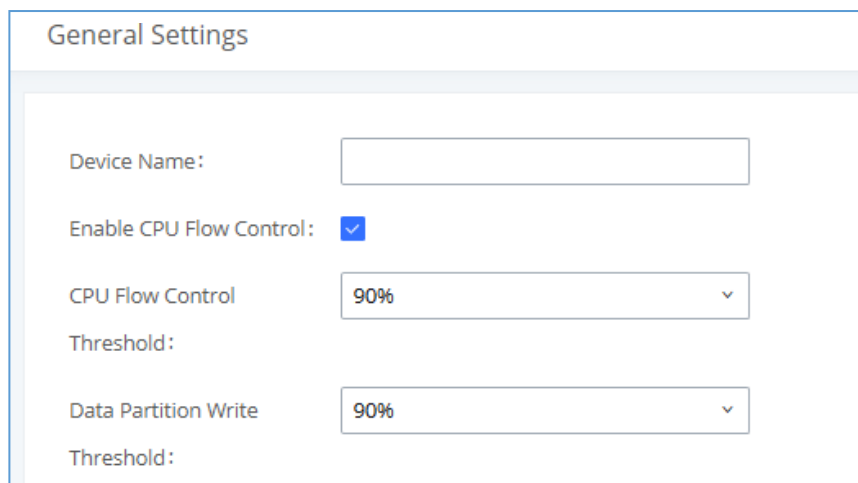

Figure 8: General Settings Interface

Table 4: General Settings Parameters

General Settings	
Device Name	Configure the name of the FCM.
Enable CPU Flow Control	Enables the CPU flow control.
CPU Flow Control Threshold	Used to set the threshold generated by the CPU Flow Control. When the system CPU reaches the threshold, it will prohibit the new calls. Default value is 90% .
Data Partition Write Threshold	Used to set a threshold to stop writing data partition. When the disk data partition reaches the threshold configured, the data partition writing will be stopped. Default value is 90% .

HTTP Server

The FCM630A's embedded web server responds to HTTPS GET/POST requests and allows users to configure the FCM via web browsers such as Microsoft IE, Mozilla Firefox, and Google Chrome. By default, users can access the FCM by just typing its IP address into a browser address bar. The browser will automatically be redirected to HTTPS using port 8089. For example, typing in "192.168.40.50" into the address bar will redirect the browser to "<https://192.168.40.50:8089>". This behavior can be changed in the System Settings → HTTP Server page.

Table 5: HTTP Server Settings

FCM Web Settings	
Redirect From Port 80	Toggles automatic redirection to FCM's web portal from port 80. If disabled, users will need to manually add the FCM's configured HTTPS port to the server address when accessing the FCM web portal via browser. Default is "Enabled".
Port	Specifies the port number used to access the FCM HTTP server. Default is "8089".

Enable IP Address Whitelist	If enabled, only the server addresses in whitelist will be able to access the FCM's web portal. It is highly recommended to add the IP address currently used to access the FCM web page before enabling this option. Default is "Disabled".
Permitted IP(s)	List of addresses that can access the FCM web portal. Ex: 192.168.6.233 / 255.255.255.255
External Host	Configure a URL and port (optional) used to access the FCM web portal if the FCM is behind NAT.
Certificate Settings	
Certificate Options	Selects the method of acquiring SSL certificates for the FCM web server. Two methods are currently available: <ul style="list-style-type: none"> • Upload Certificate: Upload the appropriate files from one's own PC. • Request Certificate: Enter the domain for which to request a certificate for from "Let's Encrypt".
TLS Private Key	Uploads the private key for the HTTP server. Note: Key file must be under 2MB in file size and in *.pem format. File name will automatically be changed to "private.pem".
TLS Cert	Uploads the certificate for the HTTP server. Note: Certificate must be under 2MB in file size and in *.pem format. This will be used for TLS connections and contains private key for the client and signed certificate for the server.
Domain	Enter the domain to request the certificate for and click on Request Certificate to request the certificate.

If the protocol or port has been changed, the user will be logged out and redirected to the new URL.

Network Settings

After successfully connecting the FCM630A to the network for the first time, users could login the Web GUI and go to System Settings→Network Settings to configure the network parameters for the device.

- FCM630A supports Route/Switch/Dual mode functions.

In this section, all the available network setting options are listed for all models. Select each tab in Web GUI→System Settings→Network Settings page to configure LAN settings, WAN settings, 802.1X and Port Forwarding.

Basic Settings

Please refer to the following tables for basic network configuration parameters on FCM630A, respectively.

Table 6: FCM630A Network Settings→Basic Settings

Method	<p>Select "Route", "Switch" or "Dual" mode on the network interface of FCM630A. The default setting is "Switch".</p> <ul style="list-style-type: none">• Route WAN port will be used for uplink connection. LAN port will function similarly to a regular router port.• Switch WAN port will be used for uplink connection. LAN port will be used as a bridge for connections.• Dual Both WAN and LAN ports will be used for uplink connections labeled as LAN2 and LAN1, respectively. The port selected as the Default Interface will need to have a gateway IP address configured if it is using a static IP.
MTU	Specifies the maximum transmission unit value. Default is 1492.

Preferred DNS Server	If configured, this will be used as the Primary DNS server.
WAN (when "Method" is set to "Route")	
IP Method	Select DHCP, Static IP, or PPPoE. The default setting is DHCP.
IP Address	Enter the IP address for static IP settings. The default setting is 192.168.0.160.
Subnet Mask	Enter the subnet mask address for static IP settings. The default setting is 255.255.0.0.
Gateway IP	Enter the gateway IP address for static IP settings. The default setting is 0.0.0.0.
DNS Server 1	Enter the DNS server 1 address for static IP settings.
DNS Server 2	Enter the DNS server 2 address for static IP settings.
Username	Enter the username to connect via PPPoE.
Password	Enter the password to connect via PPPoE.
Layer 2 QoS 802.1Q/VLAN Tag	Assign the VLAN tag of the layer 2 QoS packets for WAN port. The default value is 0.
Layer 2 QoS 802.1p Priority Value	Assign the priority value of the layer 2 QoS packets for WAN port. The default value is 0.
LAN (when Method is set to "Route")	
IP Address	Enter the IP address assigned to LAN port. The default setting is 192.168.2.1.
Subnet Mask	Enter the subnet mask. The default setting is 255.255.255.0.
DHCP Server Enable	Enable or disable DHCP server capability. The default setting is "Yes".
DNS Server 1	Enter DNS server address 1. The default setting is 8.8.8.8.
DNS Server 2	Enter DNS server address 2. The default setting is 208.67.222.222.

Allow IP Address From	Enter the DHCP IP Pool starting address. The default setting is 192.168.2.100.
Allow IP Address To	Enter the DHCP IP Pool ending address. The default setting is 192.168.2.254.
Default IP Lease Time	Enter the IP lease time (in seconds). The default setting is 43200.
LAN (when Method is set to "Switch")	
IP Method	Select DHCP, Static IP, or PPPoE. The default setting is DHCP.
IP Address	Enter the IP address for static IP settings. The default setting is 192.168.0.160.
Subnet Mask	Enter the subnet mask address for static IP settings. The default setting is 255.255.0.0.
Gateway IP	Enter the gateway IP address for static IP settings. The default setting is 0.0.0.0.
DNS Server 1	Enter the DNS server 1 address for static IP settings.
DNS Server 2	Enter the DNS server 2 address for static IP settings.
Username	Enter the username to connect via PPPoE.
Password	Enter the password to connect via PPPoE.
Layer 2 QoS 802.1Q/VLAN Tag	Assign the VLAN tag of the layer 2 QoS packets for LAN port. The default value is 0.
Layer 2 QoS 802.1p Priority Value	Assign the priority value of the layer 2 QoS packets for LAN port. The default value is 0.
LAN 1 / LAN 2 (when Method is set to "Dual")	
Default Interface	If "Dual" is selected as "Method", users will need assign the default interface to be LAN 1 (mapped to FCM630A WAN port) or LAN 2 (mapped to FCM630A LAN port) and then configure network settings for LAN 1/LAN 2. The default interface is LAN 2.
IP Method	Select DHCP, Static IP, or PPPoE. The default setting is DHCP.

IP Address	Enter the IP address for static IP settings. The default setting is 192.168.0.160.
Subnet Mask	Enter the subnet mask address for static IP settings. The default setting is 255.255.0.0.
Gateway IP	Enter the gateway IP address for static IP settings when the port is assigned as default interface. The default setting is 0.0.0.0.
DNS Server 1	Enter the DNS server 1 address for static IP settings.
DNS Server 2	Enter the DNS server 2 address for static IP settings.
Username	Enter the username to connect via PPPoE.
Password	Enter the password to connect via PPPoE.
Layer 2 QoS 802.1Q/VLAN Tag	Assign the V LAN tag of the layer 2 QoS packets for LAN port. The default value is 0.
Layer 2 QoS 802.1p Priority Value	Assign the priority value of the layer 2 QoS packets for LAN port. The default value is 0.
IPv6 Address	
WAN (when "Method" is set to "Route")	
IP Method	Select Auto or Static. The default setting is Auto
IP Address	Enter the IP address for static IP settings.
IP Prefixlen	Enter the Prefix length for static settings. Default is 64
DNS Server 1	Enter the DNS server 1 address for static settings.
DNS Server 2	Enter the DNS server 2 address for static settings.
LAN (when Method is set to "Route")	
DHCP Server	<p>Select Disable, Auto or DHCPv6.</p> <ul style="list-style-type: none"> • Disable: the DHCPv6 server is disabled. • Auto: Stateless address auto configuration using NDP protocol.

	<ul style="list-style-type: none"> • DHCPv6: Stateful address auto configuration using DHCPv6 protocol. The default setting is Disabled.
DHCP Prefix	Enter DHCP prefix. (Default is 2001:db8:2:2::)
DHCP prefixlen	Enter the Prefix length for static settings. Default is 64
DNS Server 1	Enter the DNS server 1 address for static settings. Default is (2001:4860:4860::8888)
DNS Server 2	Enter the DNS server 2 address for static settings. Default is (2001:4860:4860::8844)
Allow IP Address From	Configure starting IP address assigned by the DHCP prefix and DHCP prefixlen.
Allow IP Address To	Configure the ending IP address assigned by the DHCP Prefix and DHCP prefixlen.
Default IP Lease Time	Configure the lease time (in second) of the IP address.
LAN (when Method is set to "Switch")	
IP Method	Select Auto or Static. The default setting is Auto
IP Address	Enter the IP address for static IP settings.
IP Prefixlen	Enter the Prefix length for static settings. Default is 64
DNS Server 1	Enter the DNS server 1 address for static settings.
DNS Server 2	Enter the DNS server 2 address for static settings.
LAN 1 / LAN 2 (when Method is set to "Dual")	
Default Interface	Users will need assign the default interface to be LAN 1 (mapped to FCM630A WAN port) or LAN 2 (mapped to FCM630A LAN port) and then configure network settings for LAN 1/LAN 2. The default interface is LAN 1.
IP Method	Select Auto or Static. The default setting is Auto
IP Address	Enter the IP address for static IP settings.

IP Prefixlen	Enter the Prefix length for static settings. Default is 64
DNS Server 1	Enter the DNS server 1 address for static settings.
DNS Server 2	Enter the DNS server 2 address for static settings.

Method: Route

When the FCM630A has, method set to Route in network settings, WAN port interface is used for uplinkconnection and LAN port interface is used as a router. Please see a sample diagram below.

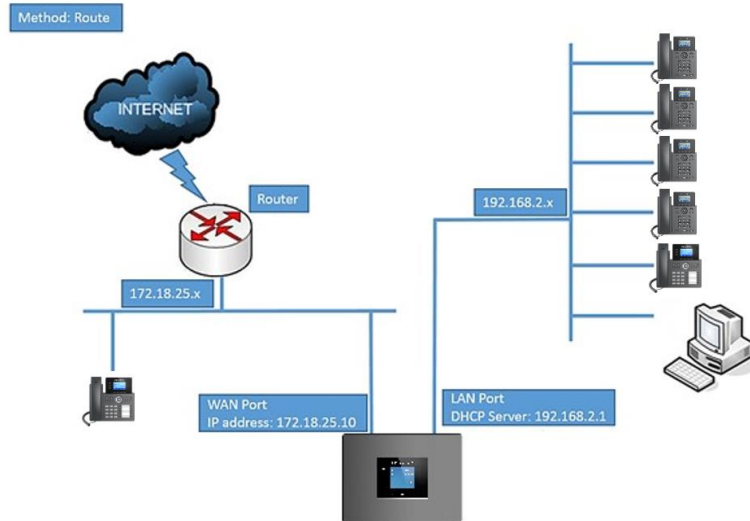

Figure 9: FCM630A Network Interface Method: Route

Method: Switch

WAN port interface is used for uplink connection; LAN port interface is used as a room for PC

connection.

Figure 10: FCM630A Network Interface Method: Switch

Method: Dual

Both WAN port and LAN port are used for uplink connection. Users will need assign LAN 1 or LAN 2 as the default interface in option "Default Interface" and configure "Gateway IP" if static IP is used for this interface.

Figure 11: FCM630A Network Interface Method: Dual

802.1X

IEEE 802.1X is an IEEE standard for port-based network access control. It provides an authentication mechanism to device before the device can access Internet or other LAN resources. The FCM630A supports 802.1X as a supplicant/client to be authenticated. The following diagram and figure show FCM630A use 802.1X mode "EAP-MD5" on WAN port as client in the network to access Internet.

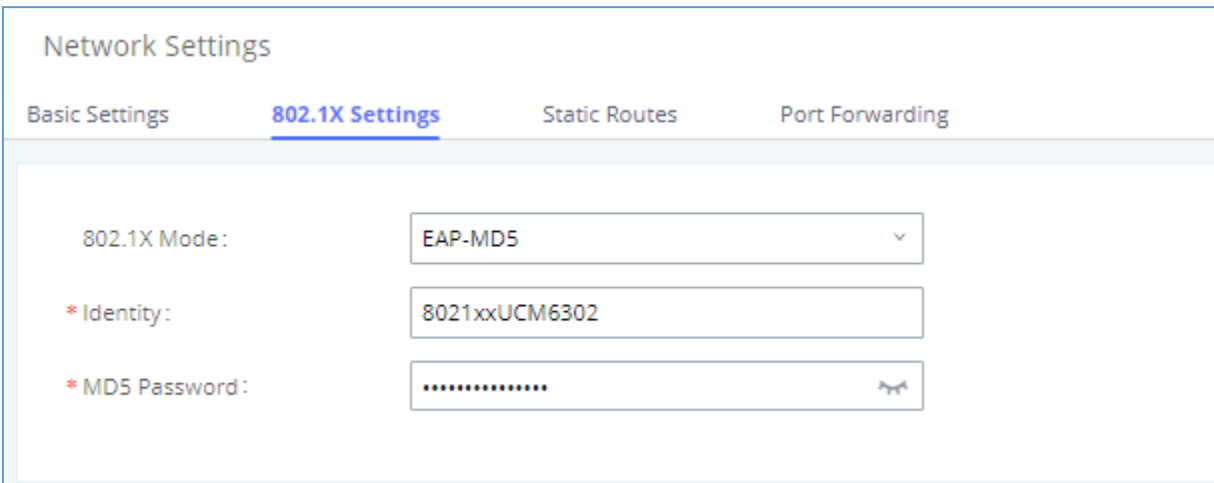

Figure 12: FCM630A Using 802.1X as Client

The screenshot shows the 'Network Settings' interface with the '802.1X Settings' tab selected. The configuration is as follows:

Field	Value
802.1X Mode :	EAP-MD5
* Identity :	8021xxUCM6302
* MD5 Password :	[Masked]

Figure 13: FCM630A Using 802.1X EAP-MD5

The following table shows the configuration parameters for 802.1X on FCM630A. Identity and MD5 password are required for authentication, which should be provided by the network administrator obtained from the RADIUS server. If “EAP-TLS” or “EAP-PEAPv0/MSCHAPv2” is used, users will also need to upload 802.1X CA Certificate and 802.1X Client Certificate, which should be also generated from the RADIUS server.

Table 7: FCM630A Network Settings→802.1X

802.1X Mode	Select 802.1X mode. The default setting is "Disable". The supported 802.1X mode are: <ul style="list-style-type: none"> • EAP-MD5 • EAP-TLS • EAP-PEAPv0/MSCHAPv2
Identity	Enter 802.1X mode Identity information.
MD5 Password	Enter 802.1X mode MD5 password information.
802.1X CA Certificate	Select 802.1X certificate from local PC and then upload.
802.1X Client Certificate	Select 802.1X client certificate from local PC and then upload.

Static Routes

The FCM630A provides users static routing capability that allows the device to use manually configured routes, rather than information only from dynamic routing or gateway configured in the FCM630A Web GUI→System Settings→Network Settings→Basic Settings to forward traffic. It can be used to define a route when no other routes are available or necessary, or used in complementary with existing routing on the FCM630A as a failover backup, etc.

- Click on “**Add IPv4 Static Route**” to create a new IPv4 static route or click on “**Add IPv6 Static Route**” to create a new IPv6 static route. The configuration parameters are listed in the table below.
- Once added, users can select  to edit the static route.
- Select  to delete the static route.

Table 8: FCM630A Network Settings→Static Routes

Destination	<p>Configure the destination IPv4 address or the destination IPv6 subnet for the FCM630A to reach using the static route.</p> <p style="text-align: center;">Example:</p> <p style="text-align: center;">IPv4 address - 192.168.66.4</p> <p style="text-align: center;">IPv6 subnet - 2001:740:D::1/64</p>
Subnet Mask	<p>Configure the subnet mask for the above destination address. If left blank, the default value is 255.255.255.255.</p> <p style="text-align: center;">Example:</p> <p style="text-align: center;">255.255.255.0</p>
Gateway	<p>Configure the IPv4 or IPv6 gateway address so that the FCM630A can reach the destination via this gateway. Gateway address is optional.</p> <p style="text-align: center;">Example:</p> <p style="text-align: center;">192.168.40.5 or 2001:740:D::1</p>
Interface	<p>Specify the network interface on the FCM630A to reach the destination using the static route.</p> <p style="text-align: center;">LAN interface is eth0; WAN interface is eth1.</p>

Static routes configuration can be reset from **LCD Menu→Network Menu**.

The following diagram shows a sample application of static route usage on FCM630A

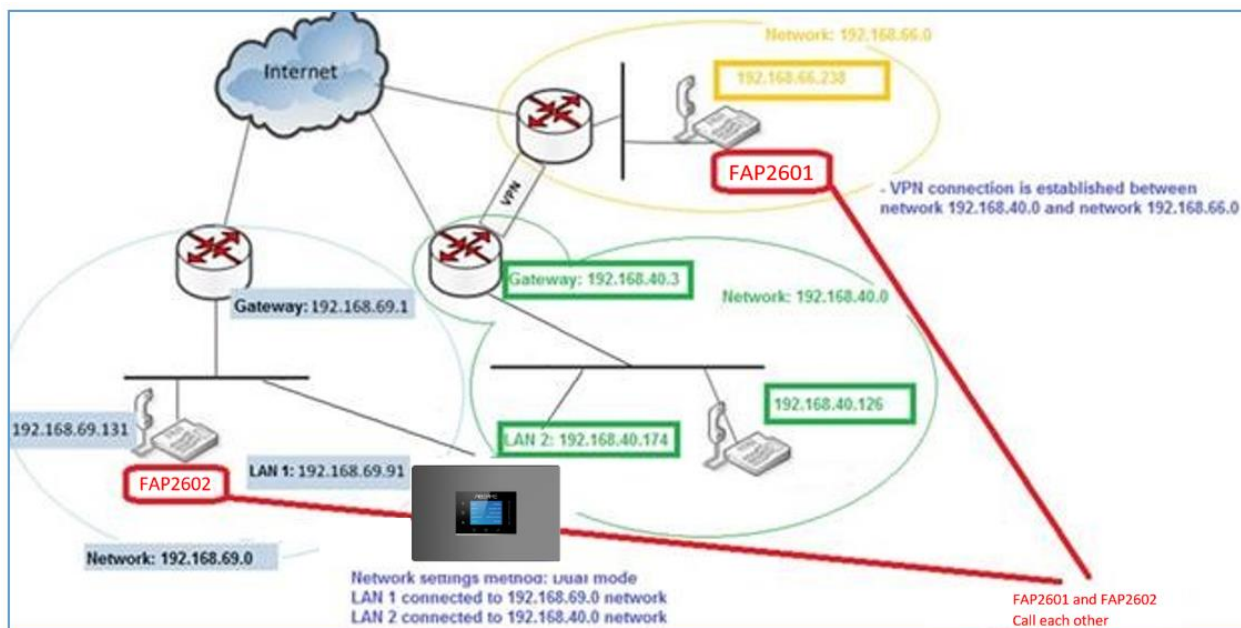

Figure 14: FCM630A Static Route Sample

The network topology of the above diagram is as below:

- Network 192.168.69.0 has IP phones registered to FCM630A LAN 1 address
- Network 192.168.40.0 has IP phones registered to FCM630A LAN 2 address
- Network 192.168.66.0 has IP phones registered to FCM630A via VPN
- Network 192.168.40.0 has VPN connection established with network 192.168.66.0

In this network, by default the IP phones in network 192.168.69.0 are unable to call IP phones in network 192.168.66.0 when registered on different interfaces on the FCM630A. Therefore, we need configure a static route on the FCM630A so that the phones in isolated networks can make calls between each other.

Subnet Mask:

Gateway:

* Protocol Type: ▾

Figure 15: FCM630A Static Route Configuration

Port Forwarding

The FCM network interface supports router function which provides users the ability to do port forwarding. If LAN mode is set to "Route" under Web GUI→System Settings→Network Settings→Basic Settings page, port forwarding is available for configuration.

The port forwarding configuration is under Web GUI→**System Settings**→**Network Settings**→**Port Forwarding** page. Please see related settings in the table below.

Table 9: FCM630A Network Settings→Port Forwarding

WAN Port	<p>Specify the WAN port number or a range of WAN ports. Unlimited number of ports can be configured.</p> <p style="text-align: center;">Note:</p> <p>When it is set to a range, WAN port and LAN port must be configured with the same range, such as WAN port: 1000-1005 and LAN port: 1000-1005, and access from WAN port will be forwarded to the LAN port with the same port number, for example, WAN port 1000 will be port forwarding to LAN port 1000.</p>
LAN IP	Specify the LAN IP address.
LAN Port	Specify the LAN port number or a range of LAN ports.

	Note:
	When it is set to a range, WAN port and LAN port must be configured with the same range, such as WAN port: 1000-1005 and LAN port: 1000-1005, and access from WAN port will be forwarded to the LAN port with the same port number, for example, WAN port 1000 will be port forwarding to LAN port 1000.
Protocol Type	Select protocol type "UDP Only", "TCP Only" or "TCP/UDP" for the forwarding in the selected port. The default setting is "UDP Only".

The following figures demonstrate a port forwarding example to provide phone's Web GUI access to public side.

- FCM630A network mode is set to "Route".
- FCM630A WAN port is connected to uplink switch, with a public IP address configured, e.g. 1.1.1.1.
- FCM630A LAN port provides DHCP pool that connects to multiple phone devices in the LAN network 192.168.2.x. The FCM630A is used as a router, with gateway address 192.168.2.1.
- There is a FAP2601 connected under the LAN interface network of the FCM630A. It obtains IP address 192.168.2.100 from FCM630A DHCP pool.
- On the FCM630A Web GUI → **System Settings** → **Network Settings** → **Port Forwarding**, configure a port forwarding entry as the figure shows below.
- Click on 

WAN Port: This is the port opened on the WAN side for access purpose.

LAN IP: This is the FAP2601 IP address, under the LAN interface network of the FCM630A.

LAN Port: This is the port opened on the FAP2602P side for access purpose.

Protocol Type: We select TCP here for Web GUI access using HTTP.

Create New Port Forwarding

* WAN Port:

* LAN IP:

* LAN Port:

* Protocol Type:

Figure 16: Create New Port Forwarding

Network Settings

Basic Settings 802.1X Settings Static Routes **Port Forwarding** ARP Settings

Set the LAN mode to "Route" to enable this function. When the port map is set to a range, the start and the end values of the WAN port must be the same as the LAN port's, such as 1500-1505 must match 1500-1505. Single values must match single values, and ranges must match ranges.

+ Create New Port Forwarding

WAN PORT ↕	LAN IP ↕	LAN PORT ↕	PROTOCOL TYPE ↕	OPTIONS
No Data				

Figure 17: FCM630A Port Forwarding Configuration

This will allow users to access the FAP2601 Web GUI from public side, by typing in public IP address (example:1.1.1.1:8088).

ARP Settings

The ARP settings can be configured under Web GUI → **System Settings** → **Network Settings** → **ARP Settings**

Table 10: ARP Settings

ARP GC Threshold 1	Minimum number of entries to keep. Garbage collector will not purge entries if there are fewer than this number. The default value is 128.
ARP GC Threshold 2	Threshold when garbage collector becomes more aggressive about purging entries. Entries older than 5 seconds will be cleared when over this number. The default value is 512.

ARP GC Threshold 3	Maximum number of non-PERMANENT neighbor entries allowed. Increase this when using large numbers of interfaces and when communicating with large numbers of directly connected peers. The default value is 1024.
---------------------------	--

OpenVPN®

OpenVPN® settings allow the users to configure FCM630A to use VPN features, the following table gives details about the various options in order to configure the FCM as OpenVPN Client.

Table 11: FCM630A System Settings→Network Settings→OpenVPN®

OpenVPN® Enable	Enable / Disable the OpenVPN® feature.
Configuration Method	Select OpenVPN® configuration method. Manual Configuration: Allows to configure OpenVPN® settings manually. Upload Configuration File: Allows to upload. ovpn and .conf files to the FCM and to automatically configure OpenVPN® settings.
OpenVPN® Server Address	Configures the hostname/IP and port of the server. For example: 192.168.1.2:22
OpenVPN® Server Protocol	Specify the protocol user, user should use the same settings as used on the server
OpenVPN® Device mode	Use the same setting as used on the server. <ul style="list-style-type: none"> • Dev TUN: Create a routed IP tunnel. • Dev TAP: Create an Ethernet tunnel.
OpenVPN® Use Compression	Compress tunnel packets using the LZO algorithm on the VPN link. Do not enable this unless it is also enabled in the server config file.
Enable Weak SSL Ciphers	Either to enable the Weak SSL ciphers or not.
OpenVPN® Encryption Algorithm	Specify the cryptographic cipher. Users should make sure to use the same setting that they are using on the OpenVPN server.
OpenVPN® CA Cert	Upload as SSL/TLS root certificate. This file will be renamed as 'ca.crt' automatically.

OpenVPN® Client Cert	Upload a client certificate. This file will be renamed as 'cliend.crt' automatically.
OpenVPN® Client Key	Upload a client private key. This file will be renamed as 'client.key' automatically.

* OpenVPN® CA Cert: Choose File to Upload

* OpenVPN® Client Cert: Choose File to Upload

* OpenVPN® Client Key: Choose File to Upload

Figure 18: Open VPN® Feature on the FCM630A

DDNS Settings

DDNS setting allows user to access FCM630A via domain name instead of IP address. The FCM supports DDNS service from the following DDNS provider:

- dydns.org
- noip.com
- freedns.afraid.org
- zoneedit.com
- oray.net

Here is an example of using noip.com for DDNS.

1. Register domain in DDNS service provider. Please note the FCM630A needs to have public IP access.

Hostname Information	
Hostname:	haograndstream.ddns.net 
Host Type:	<input checked="" type="radio"/> DNS Host (A) <input type="radio"/> DNS Host (Round Robin) <input type="radio"/> DNS Alias (CNAME)  <input type="radio"/> Port 80 Redirect <input type="radio"/> Web Redirect
IP Address:	<input type="text" value="1.2.3.4"/> Last Update: 2015-01-07 17:29:20 PST 
Assign to Group:	<input type="text" value="- No Group -"/>  Configure Groups
Enable Wildcard:	Wildcards are a Plus / Enhanced feature. Upgrade Now! 
Advanced Records:	TXT, SPF, and SRV records and the use of some special clients are Plus / Enhanced features. Upgrade now to use them. 

Figure 19: Register Domain Name on noip.com

2. On Web GUI → **System Settings** → **Network Settings** → **DDNS Settings**, enable DDNS service and configure username, password, and host name.

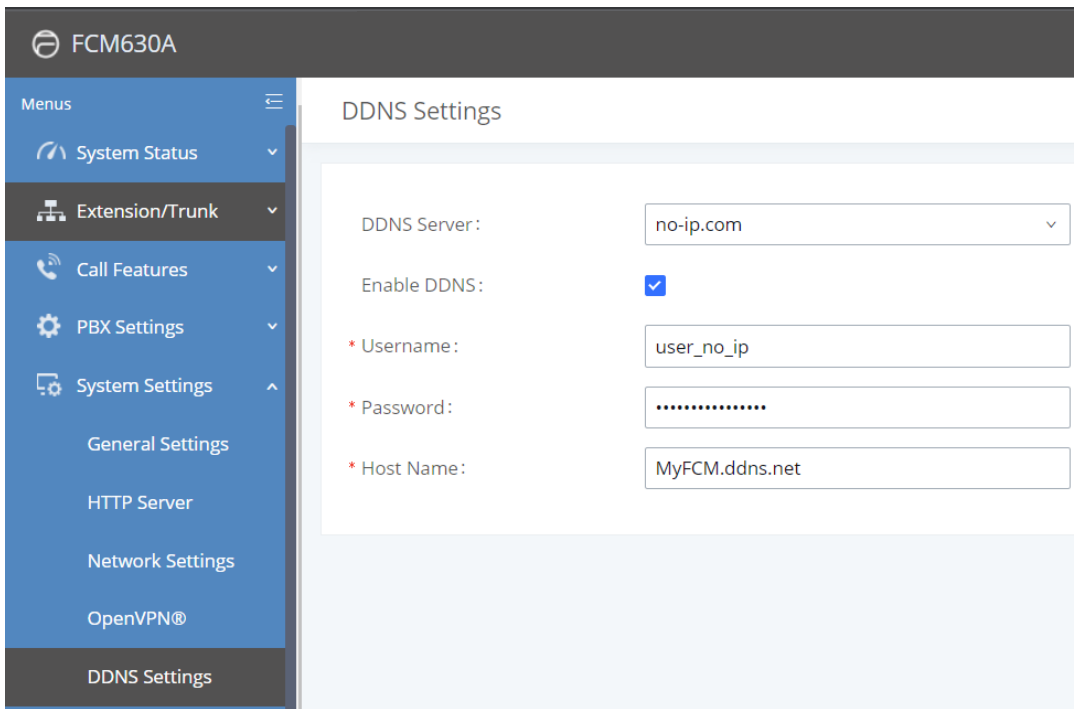

Figure 20: FCM630A DDNS Setting

3. Now you can use domain name instead of IP address to connect to the FCM630A Web GUI.

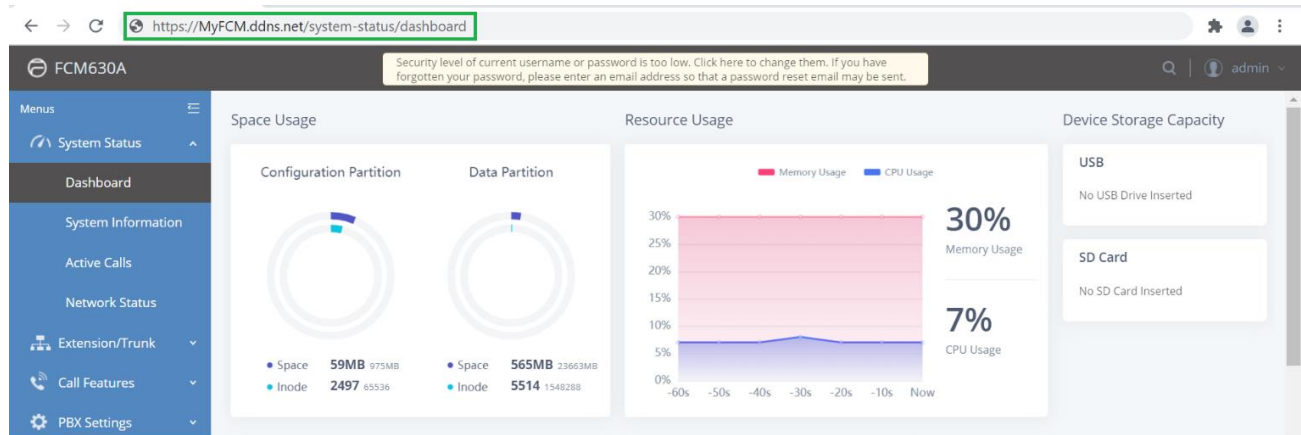

Figure 21: Using Domain Name to Connect to FCM630A

Security Settings

The FCM630A provides users firewall security configurations to prevent certain malicious attacks to the FCM630A system. Users could configure to allow, restrict, or reject specific traffic through the device for security and bandwidth purpose. The FCM630A also provides Fail2ban feature for authentication errors in SIP REGISTER, INVITE and SUBSCRIBE. To configure firewall settings in the FCM630A, go to Web GUI→SystemSettings→Security Settings page.

Static Defense

Under Web GUI→System Settings→Security Settings→Static Defense page, users will see the following information:

- Current service information with port, process, and type.
- Typical firewall settings.
- Custom firewall settings.

The following table shows a sample current service status running on the FCM630A.

Table 12: FCM630A Firewall→Static Defense→Current Service

Port	Process	Type	Protocol or Service
7777	Asterisk	TCP/IPv4	SIP
389	Slapd	TCP/IPv4	LDAP
6060	zero_config	UDP/IPv4	FCM630A zero_config service
5060	Asterisk	UDP/IPv4	SIP
4569	Asterisk	UDP/IPv4	SIP
38563	Asterisk	udp/ipv4	SIP

42050	asterisk	udp/ipv6	SIP
7681	Pbxmid	tcp/ipv4	pbxmid

For typical firewall settings, users could configure the following options on the FCM630A.

Table 13: Typical Firewall Settings

Ping Defense Enable	If enabled, ICMP response will not be allowed for Ping request. The default setting is disabled. To enable or disable it, click on the check box for the LAN or WAN (FCM630A) interface.
SYN-Flood Defense Enable	<p>Allows the FCM630A to handle excessive amounts of SYN packets from one source and keep the web portal accessible. There are two options available and only one of these options may be enabled at one time.</p> <ul style="list-style-type: none"> eth(0)LAN defends against attacks directed to the LAN IP address of the FCM630A. eth(1)WAN defends against attacks directed to the WAN IP address of the FCM630A. <p>SYN Flood Defense will limit the amount of SYN packets accepted by the FCM from one source to 10 packets per second. Any excess packets from that source will be discarded.</p>
Ping-of-Death Defense Enable	Enable to prevent Ping-of-Death attack to the device. The default setting is disabled. To enable or disable it, click on the check box for the LAN or WAN (FCM630A) interface.

Under "Custom Firewall Settings", users could create new rules to accept, reject or drop certain traffic going through the FCM630A. To create new rule, click on "Create New Rule" button and a new window will pop up for users to specify rule options.

Right next to "Create New Rule" button, there is a checkbox for option "Reject Rules". If it is checked, all the rules will be rejected except the firewall rules listed below. In the firewall rules, only when there is a rule that meets all the following requirements, the option "Reject Rules" will be allowed to check:

- Action: "Accept"
- Type "In"
- Destination port is set to the system login port (e.g., by default 8089)
- Protocol is not UDP

Figure 22: Create New

Firewall RuleTable 14:

Rule Name	Specify the Firewall rule name to identify the firewall rule.
Action	<p>Select the action for the Firewall to perform.</p> <ul style="list-style-type: none"> • ACCEPT • REJECT • DROP

Type	<p>Select the traffic type.</p> <ul style="list-style-type: none"> • IN If selected, users will need specify the network interface "LAN" or "WAN" (for FCM630A) for the incoming traffic. • OUT
Interface	Select the interface to use the Firewall rule.
Service	<p>Select the service type.</p> <ul style="list-style-type: none"> • FTP • SSH • Telnet • HTTP • LDAP • Custom <p>If "Custom" is selected, users will need specify Source (IP and port), Destination (IP and port) and Protocol (TCP, UDP or Both) for the service. Please note if the source or the destination field is left blank, it will be used as "Anywhere".</p>
Source IP Address and Port	Configure a source subnet and port. If set to "Anywhere" or left empty, traffic from all addresses and ports will be accepted. A single port or a range of ports can be specified (e.g., 10000, 10000-20000).
Destination IP Address and Port	Configure a destination subnet and port. If set to "Anywhere" or left empty, traffic can be sent to all addresses and ports. A single port or a range of ports can be specified (e.g., 10000, 10000-20000).
Protocol	Select the protocol for the rule to be used.

Save the change and click on "Apply" button. Then submit the configuration by clicking on "Apply Changes" on the upper right of the web page. The new rule will be listed at the bottom of the page with sequence number, rule name, action, protocol, type, source, destination, and operation. More operations below:

- Click on  to edit the rule.
- Click on  to delete the rule.

Dynamic Defense

Dynamic defense is supported on the FCM630A series. It can blacklist hosts dynamically when the LAN mode is set to "Route" under Web GUI→System Settings→Network Settings→Basic Settings page. If enabled, the traffic coming into the FCM630A can be monitored, which helps prevent massive connection attempts or brute force attacks to the device. The blacklist can be created and updated by the FCM630A firewall, which will then be displayed in the web page. Please refer to the following table for dynamic defense options on the FCM630A.

Table 15: FCM630A Firewall Dynamic Defense

Dynamic Defense Enable	Enable dynamic defense. The default setting is disabled.
Blacklist Update Interval	Configure the blacklist update time interval (in seconds). The default setting is 120.
Connection Threshold	Configure the connection threshold. Once the number of connections from the same host reaches the threshold, it will be added into the blacklist. The default setting is 100.
Dynamic Defense Whitelist	Allowed IPs and ports range, multiple IP addresses and port range. For example: 192.168.2.100-192.168.2.105, 1000:9999

The following figure shows a configuration example like this:

- If a host at IP address 192.168.5.7 initiates more than 20 TCP connections to the FCM630A it will be added into FCM630A blacklist.
- This host 192.168.5.7 will be blocked by the FCM630A for 500 seconds.
- Since IP range 192.168.5.100-192.168.5.200 is in whitelist, if a host initiates more than 20 TCP connections to the FCM630A it will not be added into FCM630A blacklist. It can still establish TCP connection with the FCM630A.

Figure 23: Configure Dynamic Defense

Fail2ban

Fail2Ban feature on the FCM630A provides intrusion detection and prevention for authentication errors in SIP REGISTER, INVITE and SUBSCRIBE. Once the entry is detected within "Max Retry Duration", the FCM630A will act to forbid the host for certain period as defined in "Banned Duration". This feature helps prevent SIP bruteforce attacks to the PBX system.

Security Settings

Static Defense Dynamic Defense **Fail2ban** SSH Access

Global Settings

Enable Fail2Ban:

* Banned Duration:

* Max Retry Duration:

* MaxRetry:

Fail2ban Whitelist: ⊕

Local Settings

Login Attack Defense:

Listening port number: TCP Port

* MaxRetry:

Figure 24: Fail2ban Settings

Table 16: Fail2Ban Settings

Global Settings	
Enable Fail2Ban	Enable Fail2Ban. The default setting is disabled. Please make sure both "Enable Fail2Ban" and "Asterisk Service" are turned on to use Fail2Ban for SIP authentication on the FCM630A.
Banned Duration	Configure the duration (in seconds) for the detected host to be banned. The default

Max Retry Duration	<p>setting is 600. If set to 0, the host will be always banned.</p> <p>Within this duration (in seconds), if a host exceeds the max times of retry as defined in "MaxRetry", the host will be banned. The default setting is 600.</p>
MaxRetry	Configure the number of authentication failures during "Max Retry Duration" before the host is banned. The default setting is 5.
Fail2Ban Whitelist	Configure IP address, CIDR mask or DNS host in the whitelist. Fail2Ban will not ban the host with matching address in this list. Up to 20 addresses can be added into the list.
Local Settings	
Asterisk Service	Enable Asterisk service for Fail2Ban. The default setting is disabled. Please make sure both "Enable Fail2Ban" and "Asterisk Service" are turned on to use Fail2Ban for SIP authentication on the FCM630A.
Listening PortNumber	Configure the listening port number for the service. By default, port 5060 will be used for UDP and TCP, and port 5061 will be used for TCP.
MaxRetry	Configure the number of authentication failures during "Max Retry Duration" before the host is banned. The default setting is 5. Please make sure this option is properly configured as it will override the "MaxRetry" value under "Global Settings".
Login Attack Defense	<p>Enables defense against excessive login attacks to the FCM's web GUI.</p> <p>The default setting is disabled.</p>
Listening PortNumber	<p>This is the Web GUI listening port number which is configured under System Settings→HTTP Server→Port.</p> <p>The default is 8089.</p>
MaxRetry	When the number of failed login attempts from an IP address exceeds the MaxRetry number, that IP address will be banned from accessing the Web GUI.
Blacklist	
Blacklist	Users will be able to view the IPs that have been blocked by FCM.

SSH Access

SSH switch now is available via Web GUI and LCD. User can enable or disable SSH access directly from WebGUI or LCD screen. For web SSH access, please log in FCM630A web interface and go to Web GUI→SystemSettings→Security Settings→SSH Access.

The "Enable SSH access" option is for system debugging. If you enable this option, the system will allow SSH access. The SSH connection also requires the username and password of the super administrator. This option is turned off by default. It is recommended to turn off this option when debugging is not required.

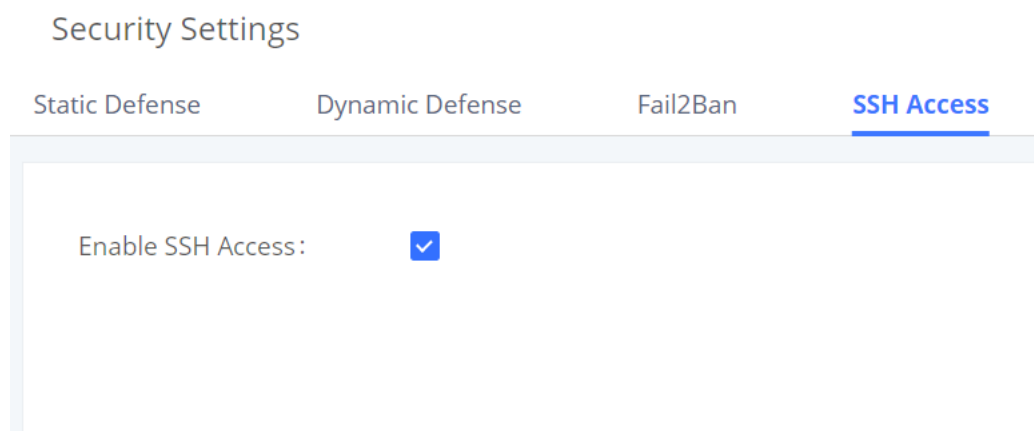

Figure 25: SSH Access

Table 17: SSH Access

Enable SSH Access	This option is used for system debugging. Once enabled, FCM will allow SSH access. The SSH connection requires super administrator's username and password. The default setting is "No". It is recommended to set it to "No" if there is no need for debugging.
--------------------------	---

LDAP Server

The FCM630A has an embedded LDAP/LDAPS server for users to manage corporate phonebook in a centralized manner.

- By default, the LDAP server has generated the first phonebook with **PBX DN** "ou=pbx,dc=pbx,dc=com" based on the FCM630A user extensions already.
- Users could add new phonebook with a different **Phonebook DN** for other external contacts. For example, "ou=people,dc=pbx,dc=com".
- All the phonebooks in the FCM630A LDAP server have the same **Base DN** "dc=pbx,dc=com".

Term Explanation:

cn= Common Name

ou= Organization Unit

dc= Domain Component

These are all parts of the LDAP data Interchange Format, according to RFC 2849, which is how the LDAP tree is filtered.

If users have the FIBERME phone provisioned by the FCM630A, the LDAP directory will be set up on the phone and can be used right away for users to access all phonebooks.

Additionally, users could manually configure the LDAP client settings to manipulate the built-in LDAP server on the FCM630A. If the FCM630A has multiple LDAP phonebooks created, in the LDAP client configuration, users could use "dc=pbx,dc=com" as Base DN to have access to all phonebooks on the FCM630A LDAP server, or use a specific phonebook DN, for example "ou=people,dc=pbx,dc=com", to access to phonebook with Phonebook DN "ou=people,dc=pbx,dc=com" only.

FCM can also act as a LDAP client to download phonebook entries from another LDAP server. To access LDAP server and client settings, go to Web GUI → **Settings** → **LDAP Server**.

LDAP Server Configurations

The following figure shows the default LDAP server configurations on the FCM630A.

Field	Value	Additional Info
* Base DN:	dc=pbx,dc=com	
PBX DN:	ou=pbx	,dc=pbx,dc=com
Root DN:	cn=admin	,dc=pbx,dc=com
* Root Password:	🔒
* Confirm Root Password:	🔒
LDAP Cert:	server.crt	Reset Certificates
LDAP Private Key:	private.key	Reset Certificates
LDAP CA Cert:	server.ca	Reset Certificates

Figure 26: LDAP Server Configurations

The FCM630A LDAP server supports anonymous access (read-only) by default. Therefore, the LDAP client does not have to configure username and password to access the phonebook directory. The "Root DN" and "Root Password" here are for LDAP management and configuration where users will need provide for authentication purpose before modifying the LDAP information.

The default phonebook list in this LDAP server can be viewed and edited by clicking on  for the first phonebook under LDAP Phonebook.

The FCM630A support secure LDAP (LDAPS) where the communication is encrypted and secure.

Figure 27: Default LDAP Phonebook DN

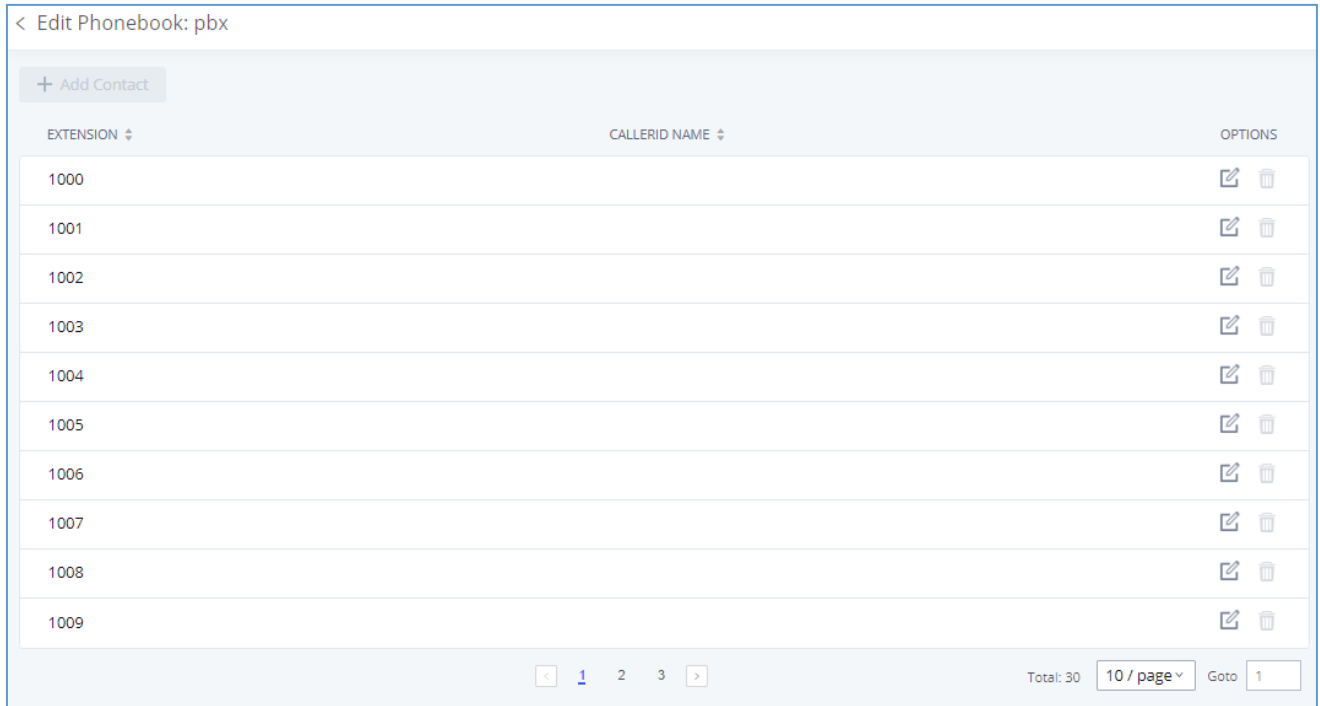

Figure 28: Default LDAP Phonebook Attributes

LDAP Phonebook

Users could use the default phonebook, edit the default phonebook, add new phonebook, import phonebook on the LDAP server as well as export phonebook from the LDAP server. The first phonebook with default phonebookdn "ou=pbx,dc=pbx,dc=com" displayed on the LDAP server page is for extensions in this PBX. Users cannot add or delete contacts directly. The contacts information will need to be modified via Web GUI→Extension/Trunk→Extensions first. The default LDAP phonebook will then be updated automatically.

Figure 29: LDAP Server →LDAP Phonebook

- **Add new phonebook**

A new sibling phonebook of the default PBX phonebook can be added by clicking on "Add" under "LDAP Phonebook" section.

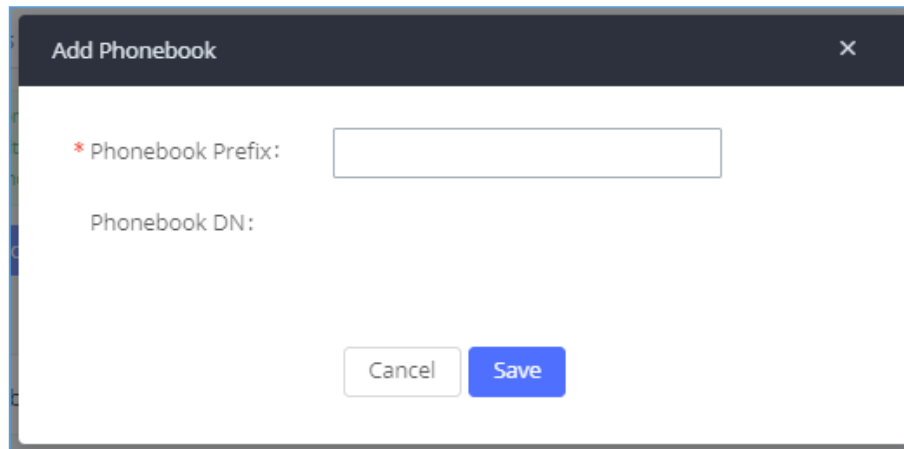

Figure 30: Add LDAP Phonebook

Configure the "Phonebook Prefix" first. The "Phonebook DN" will be automatically filled in. For example, if configuring "Phonebook Prefix" as "people", the "Phonebook DN" will be filled with "ou=people,dc=pbx,dc=com".

Once added, users can select  to edit the phonebook attributes and contact list (see figure below) or  to delete the phonebook.

Figure 31: Edit LDAP Phonebook

- **Import phonebook from your computer to LDAP server**

Click on “Import Phonebook” and a dialog will prompt as shown in the figure below.

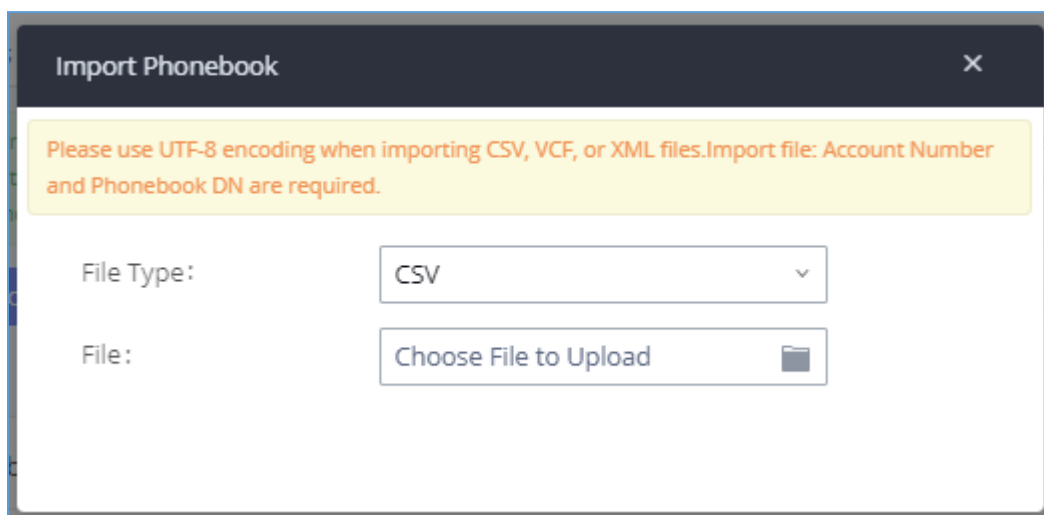

Figure 32: Import Phonebook

The file to be imported must be a CSV, VCF or XML file with UTF-8 encoding. Users can open the file with Notepad and save it with UTF-8 encoding.

Here is how a sample file looks like. Please note “Account Number” and “Phonebook DN” fields are required. Users could export a phonebook file from the FCM630A LDAP phonebook section first and use it as a sample to start with.

	A	B	C	D	E	F	G	H	I	J
1	First Name	Last Name	Account Number	CallerID Name	Email	Department	Mobile Number	Home Number	Fax	Phonebook DN
2	John	Doe	1001	1001		IT	1001000000			phonebook
3	Jane	Doe	1002	1002		Sales	1002000000			phonebook
4	William	Chung	1003	1003		Marketing	1003000000			phonebook
5	Linda	Kuo	1004	1004		Accounting	1004000000			phonebook
6	Steve	Chang	1005	1005		Support	1005000000			others

Figure 33: Phonebook CSV File Format

The Phonebook DN field is the same “Phonebook Prefix” entry as when the user clicks on “Add” to create a new phonebook. Therefore, if the user enters “phonebook” in “Phonebook DN” field in the CSV file, the actual phonebook DN “ou=phonebook,dc=pbx,dc=com” will be automatically created by the FCM630A once the CSV file is imported.

In the CSV file, users can specify different phonebook DN fields for different contacts. If the phonebook DN already exists on the FCM630A LDAP Phonebook, the contacts in the CSV file will be added into the existing phonebook. If the phonebook DN does not exist on the FCM630A LDAP Phonebook, a new phonebook with

This phonebook DN will be created.

The sample phonebook CSV file in above picture will result in the following LDAP phonebook in the FCM630A.

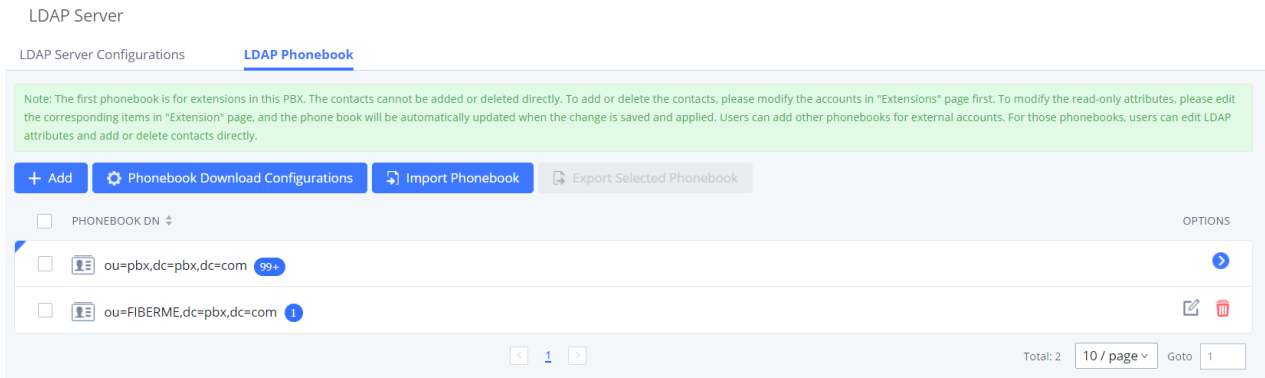

Figure 34: LDAP Phonebook After Import

As the default LDAP phonebook with DN “ou=pbx,dc=pbx,dc=com” cannot be edited or deleted in LDAP phonebook section, users cannot import contacts with Phonebook DN field “pbx” if existed in the CSV file.

- **Export phonebook to your computer from FCM630A LDAP server**

Select the checkbox for the LDAP phonebook and then click on “Export Selected Phonebook” to export the selected phonebook. The exported phonebook can be used as a record or a sample CSV, VFC or XML file for the users to add more contacts in it and import to the FCM630A again.

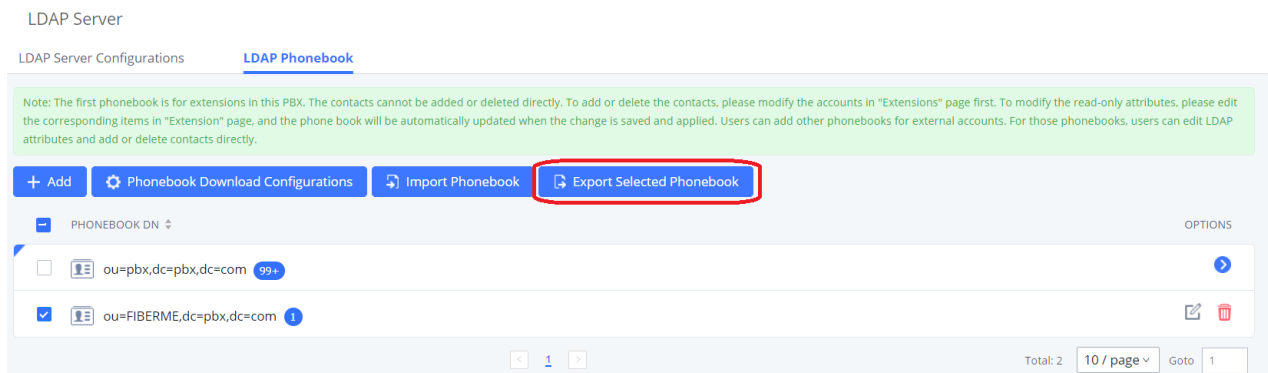

Figure 35: Export Selected LDAP Phonebook

LDAP Client Configurations

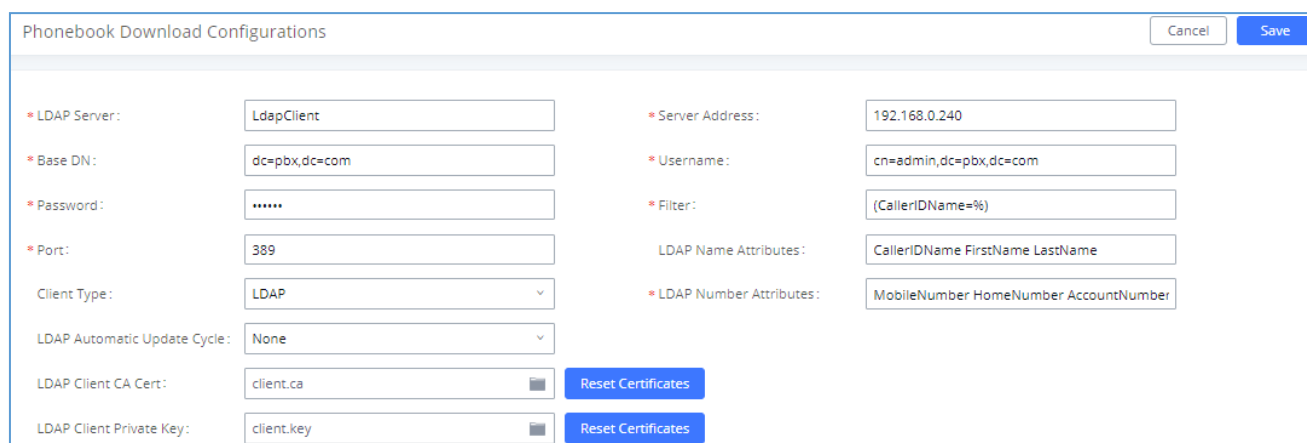

The configuration on LDAP client is useful when you use other LDAP servers. how to configure the LDAP client on the FCM.

Assuming the remote server base dn is “dc=pbx,dc=com”, configure the LDAP client as follows:

- **LDAP Server** : Enter a name for the remote LDAP server
- **Server Address** : Enter the IP address or domain name for remote LDAP server.
- **Base DN**: dc=pbx,dc=com
- **Username**: Enter username if authentication is required
- **Password**: Enter password if authentication is required
- **Filter**: Enter the filter. Ex: ((CallerIDName=%)(AccountNumber=%))
- **Port**: Enter the port number. Ex:389
- **LDAP Name Attributes**: Enter the name attributes for remote server
- **LDAP Number Attributes**: Enter the number attributes for remote server

The FCM can automatically update the phonebook, by configuring the ‘LDAP Automatic Update Cycle’. Available options are: 1 day/2days/7 days. It is set to ‘None’ by default.

The following figure gives a sample configuration for FCM acting as a LDAP client.

The screenshot shows a dialog box titled "Phonebook Download Configurations" with "Cancel" and "Save" buttons. The configuration fields are as follows:

* LDAP Server:	LdapClient	* Server Address:	192.168.0.240
* Base DN:	dc=pbx,dc=com	* Username:	cn=admin,dc=pbx,dc=com
* Password:	*****	* Filter:	(CallerIDName=%)
* Port:	389	LDAP Name Attributes:	CallerIDName FirstName LastName
Client Type:	LDAP	* LDAP Number Attributes:	MobileNumber HomeNumber AccountNumber
LDAP Automatic Update Cycle:	None		
LDAP Client CA Cert:	client.ca	Reset Certificates	
LDAP Client Private Key:	client.key	Reset Certificates	

Figure 36: LDAP Client Configurations

To configure FIBERME IP phones as the LDAP clients for FCM, please refer to the following example:

- **Server Address:** The IP address or domain name of the FCM
- **Base DN:** dc=pbx,dc=com
- **Username:** Please leave this field empty
- **Password:** Please leave this field empty
- **LDAP Name Attribute:** CallerIDName Email Department FirstName LastName
- **LDAP Number Attribute:** AccountNumber MobileNumber HomeNumber Fax
- **LDAP Number Filter:** (AccountNumber=%)
- **LDAP Name Filter:** (CallerIDName=%)
- **LDAP Display Name:** AccountNumber CallerIDName
- **LDAP Version:** If existed, please select LDAP Version 3
- **Port:** 389

The following figure shows the configuration information on a FIBERME FAP2601 to successfully use the LDAP server as configured in **[Figure 35: LDAP Server Configurations]**.

LDAP

Time Settings

Automatic Date and Time

The current system time on the FCM630A can be found under Web GUI→**System Status**→**Dashboard**→**PBX Status**.

To configure the FCM630A to update time automatically, go to Web GUI→**System Settings**→**Time Settings**→**Automatic date and Time**.

Note:

The configurations under Web GUI→Settings→Time Settings→ Automatic date and Time page require reboot to take effect. Please consider configuring auto time updating related changes when setting up the FCM630A for the first time to avoid service interrupt after installation and deployment in production.

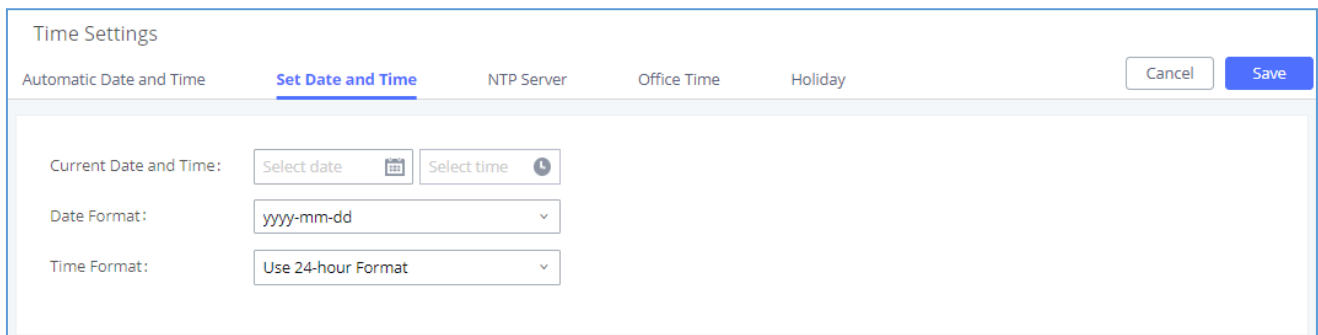

Table 18: Time Auto Updating

Remote NTP Server	Specify the URL or IP address of the NTP server for the FCM630A to synchronize the date and time. The default NTP server is pool.ntp.org.
Enable DHCP Option 2	If set to "Yes", the FCM630A can get provisioned for Time Zone from DHCP Option 2 in the local server automatically. The default setting is "Yes".
Enable DHCP Option 42	If set to "Yes", the FCM630A can get provisioned for NTP Server from DHCP Option 42 in the local server automatically. This will override the manually configured NTP Server. The default setting is "Yes".
Time Zone	Select the proper time zone option so the FCM630A can display correct time accordingly.

Set Date and Time

To manually set the time on the FCM630A, go to Web GUI→**System Settings**→**Time Settings**→**Set Date and Time**. The format is YYYY-MM-DD HH:MM:SS.

The screenshot shows the 'Time Settings' web interface. At the top, there are tabs for 'Automatic Date and Time', 'Set Date and Time' (which is selected), 'NTP Server', 'Office Time', and 'Holiday'. On the right side of the tabs, there are 'Cancel' and 'Save' buttons. Below the tabs, the 'Current Date and Time' section has two input fields: 'Select date' with a calendar icon and 'Select time' with a clock icon. Below these are two dropdown menus: 'Date Format' set to 'yyyy-mm-dd' and 'Time Format' set to 'Use 24-hour Format'.

Figure 38: Set Time Manually

Note: Manually setup time will take effect immediately after saving and applying change in the Web GUI. If users would like to reboot the FCM630A and keep the manually setup time setting, please make sure "Remote NTP Server", "Enable DHCP Option 2" and "Enable DHCP Option 42" options under Web GUI→Settings→Time Settings→Auto Time Updating page are unchecked or set to empty. Otherwise, time auto updating settings in this page will take effect after reboot.

NTP Server

The FCM630A can be used as an NTP server for the NTP clients to synchronize their time with. To configure the FCM630A as the NTP server, set "Enable NTP server" to "Yes" under Web GUI→System Settings→Time Settings→NTP Server. On the client side, point the NTP server address to the FCM630A IP address or host name to use the FCM630A as the NTP server.

Office Time

On the FCM630A, the system administrator can define "office time", which can be used to configure time condition for extension call forwarding schedule and inbound rule schedule. To configure office time, go to WebGUI→System Settings→Time Settings→Office Time. Click on "Add" to create an office time.

Figure 39: Create New

Office TimeTable 19:

Start Time	Configure the start time for office hour.
End Time	Configure the end time for office hour
Week	Select the workdays in one week.

Show Advanced Options	Check this option to show advanced options. Once selected, please specify "Month" and "Day" below.
Month	Select the months for office time.
Day	Select the workdays in one month.

Select "Start Time", "End Time" and the day for the "Week" for the office time. The system administrator can also define month and day of the month as advanced options. Once done, click on "Save" and then "Apply Change" for the office time to take effect. The office time will be listed in the web page as the figure shows below.

Figure 40: Settings→Time Settings→Office Time

- Click on  to edit the office time.
- Click on  to delete the office time.
- Click on "**Delete**" to delete multiple selected office times at once.

Holiday

On the FCM630A, the system administrator can define "holiday", which can be used to configure time condition for extension call forwarding schedule and inbound rule schedule. To configure holiday, go to Web GUI→SystemSettings→Time Settings→Holiday. Click on "Add" to create holiday time.

The screenshot shows a web interface for creating a new holiday. On the left is a blue sidebar menu with the following items: System Status, Extension/Trunk, Call Features, PBX Settings, System Settings (expanded), General Settings, HTTP Server, Network Settings, OpenVPN®, DDNS Settings, Security Settings, LDAP Server, Time Settings (highlighted), and Email Settings. The main content area is titled 'Create New Holiday' and contains the following form fields:

- Name:** Labor Day
- Holiday Memo:** National Labor Day
- Year:** 2021
- Month:** A grid showing months from Jan to Dec, with 'May' selected.
- Day:** A calendar grid for the month of May, with the 1st selected.
- Show Advanced Options:** An unchecked checkbox.

Figure 41: Create New Holiday

Table 20: Create New Holiday

Name	Specify the holiday name to identify this holiday.
Holiday Memo	Create a note for the holiday.
Month	Select the month for the holiday.
Day	Select the day for the holiday.
Show Advanced Options	Check this option to show advanced options. If selected, please specify the days as holiday in one week below.
Week	Select the days as holiday in one week.

Enter holiday "Name" and "Holiday Memo" for the new holiday. Then select "Month" and "Day". The system administrator can also define days in one week as advanced options. Once done, click on "Save" and then

"Apply Change" for the holiday to take effect. The holiday will be listed in the web page as the figure shows below.

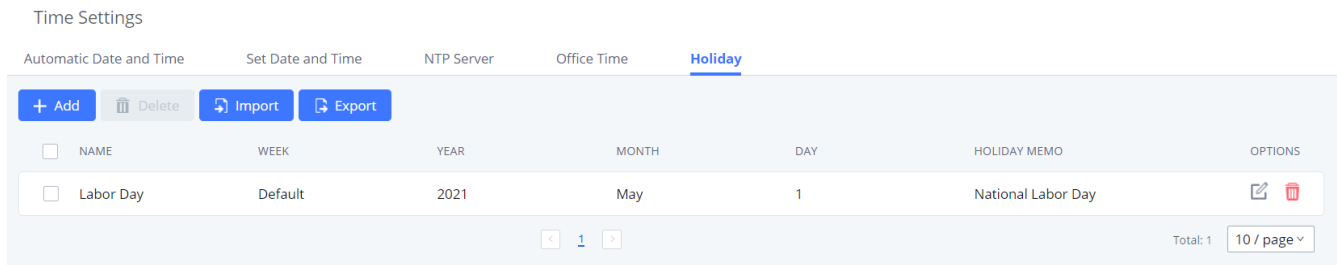

Figure 42: Settings→Time Settings→Holiday

- Click on  to edit the holiday.
- Click on  to delete the holiday.
- Click on "**Delete**" to delete multiple selected holidays at once.

 **Note:**

For more details on how to use office time and holiday, please refer to the link below:

http://download.fiberme.com/docs/FCM630A_Office_Time_and_Holiday.pdf

Email Settings

Email settings

The Email application on the FCM630A can be used to send out alert event Emails, Voicemail (Voicemail-To-Email) etc. The configuration parameters can be accessed via Web GUI→System Settings→Email Settings→Email Settings.

Table 21: Email Settings

TLS Enable	Enable or disable TLS during transferring/submitted your Email to another SMTP server. The default setting is "Yes".
-------------------	--

Type	<p>Select Email type.</p> <ul style="list-style-type: none"> • MTA: Mail Transfer Agent. The Email will be sent from the configured domain. When MTA is selected, there is no need to set up SMTP server for it or no user login is required. However, the Emails sent from MTA might be considered as spam by the target SMTP server. • Client: Submit Emails to the SMTP server. A SMTP server is required, and users need login with correct credentials.
Domain	Specify the domain name to be used in the Email when using type "MTA".
SMTP Server	Specify the SMTP server when using type "Client".
Enable SASL Authentication	Enable SASL Authentication. When disabled, FCM will not try to use the username and password for mail client login authentication. Most of the mail server requires login authentication while some others private mail servers allow anonymous login which requires disabling this option to send Email as normal. For Exchange Server, please disable this option.
Username	Username is required when using type "Client". Normally it is the Email address.
Password	Password to login for the above Username (Email address) is required when using type "Client".
POP/POP3 Server Address	Configure the POP/POP3 server address for the configured username Example: pop.gmail.com
POP/POP3 Server Port	Configure the POP/POP3 server port for the configured username Example: 995
Display Name	Specify the display name in the FROM header in the Email.
Sender	Specify the sender's Email address. For example: pbx@example.mycompany.com.

The following figure shows a sample Email setting on the FCM630A, 192.168.6.202 as the SMTP server.

Email Settings

Figure 46: Email Logs

Below are the codes returned when sending emails and their description:

Table 23: Email Codes

Code	Description
250	Mail sent successfully
501	Address format parsing error, 501 will be returned when there are unacceptable characters in the recipient's email address in MTA mode. Please check if the recipient's email address format is correct. The "sender" configured on the client is your mail account.
535	The user name and password verification in the client mode is incorrect. Please check whether the user name and password are configured correctly.
550	<p>Possible reasons:</p> <ol style="list-style-type: none"> 1. The recipient's mailbox user name does not exist or is in a banned state, please check whether the email recipient is the correct email address. 2. The number of destination addresses sent by the sender exceeds the maximum limit per day and is temporarily blacklisted. Please reduce the sending frequency or try again the next day. 3. The sender's IP does not pass the SPF permission test of the sending domain. Emails sent in MTA mode may return this error code even if they are sent.

552	The sent email is too large or the email attachment type is prohibited
553	The sender and the email account are inconsistent, please configure the sender as your email account correctly.
554	The email was identified as spam. Please reduce the sending frequency or try again the next day
none	<p>Indicates that there is no return code.</p> <p>If the sending result is "deferred", the general reason is that the mail service area is configured incorrectly. Please check whether the server configuration is correct.</p> <p>If the sending result is "bounced", the general reason is that the receiving email address domain name is wrong, please check whether the email recipient is the correct email address. If it is in MTA mode, please check whether the "domain" is configured to be in the same domain name as the "recipient".</p>

HA

Dual-system hot standby provides a highly reliable and fault-tolerant solution for enterprises using FCM630A series. Based on two FCM devices of the same product model and software version, one of them is in the "Active" working state in real time, and the other is in the "Standby" working state. The daily data on the hostserver will be synchronized to the standby machine in real time, and the standby machine monitors the running status of the host at all times. When the host fails, including hardware failures and severe software failures, the standby machine will immediately take over the business and enter the "Active" working state, and Upgrade to a host to ensure that the business is not interrupted, and the call will automatically resume.

Before forming a paired HA dual-system hot backup, two FCM devices need to complete their respective network settings. The network mode can only be switching or routing, and the IP type can only be static.

HA settings

The users can configure the HA under **System Settings** → **HA settings** page.

Figure 47: HA Settings

Table 24: HA Settings parameters

Parameter	Description
High Available Enable	Enables/disables the HA functionality. By default, is Disabled.
Force switch	After clicking the button, the active/standby switch will be enforced.
HA Station Type	The master and slave static configuration of the device, The real active / standby is decided dynamically by the active / standby.
HA Virtual IP	To carry the service, the main and standby computers should be set the same, and the intranet terminal should register and use the IP address.
HA Peer IP	Local IP address of HA peer device.
HA Peer MAC Address	Need to specify this peer MAC address while using the FCM RemoteConnect service.
Heartbeat Port	The number of the heartbeat port should be consistent with the peer heartbeat port.
Heartbeat Timeout Period (s)	If timeout occurs, services will be transferred over to the Slave FCM.
Software Fault Switch	Enable Software Fault Switch

Hardware Fault Switch	If issues are detected with the selected connection interfaces, the backup FCM630A will take over services after the master/slave handover. If not checked, FCM will send only a fault alarm.
------------------------------	---

HA Status

Once the HA is configured, the user can view its status under **system settings** → **HA** → **HA Status** as shown below

HA	
HA Settings	HA Status
HA Status:	Dual
HA Full Backup Status:	Idle
MAC Address of Current UCM:	
Role of Current UCM:	Active

Figure 48: HA Status

HA Log

The user can view the HA log through the system settings → HA → HA log page. The HA log effectively records the execution results of past full backup actions, as well as the historical records that triggered the active/standby switchover.

TR-069

To configure TR-069 on FIBERME devices, set following parameters:

Parameter	Description
Enable TR-069	Toggle it on to enable TR-069. It is enabled by default
ACS URL	URL for TR-069 Auto Configuration Servers (ACS), e.g., https://myacs.fiberme.com

TR-069 Username	ACS username for TR-069, must be the same as in the ACS configuration.
TR-069 Password	ACS password for TR-069, must be the same as in the ACS configuration.
Periodic Inform Enable	Enables periodic inform. If set to 'Yes', device will send inform packets to the ACS.
Periodic InformInterval	Periodic time when FCM630A will send inform packets to TR-069 ACS server. This option is specified in seconds.
ACS Connection Request Username	The username for the ACS to connect to FCM.
ACS Connection Request Password	The password for the ACS to connect to FCM.
Connection RequestPort	Port for incoming connection requests. The default value is 7547 .
CPE Cert File	The Cert file for FCM to connect to the ACS via SSL.
CPE Cert Key	The Cert key for FCM to connect to the ACS via SSL.

PROVISIONING

Overview

FIBERME SIP Devices can be configured via Web interface as well as via configuration file through TFTP/HTTP/HTTPS download. All FIBERME SIP devices support a proprietary binary format configuration file and XML format configuration file. The FCM630A provides a Plug and Play mechanism to auto-provision the FIBERME SIP devices in a zero-configuration manner by generating XML config file and having the phone to download it within LAN area. This allows users to finish the installation with ease and start using the SIP devices in a managed way.

To provision a phone, three steps are involved, i.e., discovery, configuration, and provisioning. This section explains how Zero Config works on the FCM630A. The settings for this feature can be accessed via Web GUI→Value-added Features→Zero Config.

Configuration Architecture for End Point Device

Started from firmware version 1.0.9.11, the end point device configuration in zero config is divided into the following three layers with priority from the lowest to the highest:

- **Global**

This is the lowest layer. Users can configure the most basic options that could apply to all FIBERME SIP devices during provisioning via Zero config.

- **Model**

In this layer, users can define model-specific options for the configuration template.

- **Device**

This is the highest layer. Users can configure device-specific options for the configuration for individual device here.

Each layer also has its own structure in different levels. Please see figure below. The details for each layer are explained in sections **[Global Configuration]**, **[Model configuration]** and **[Device Configuration]**.

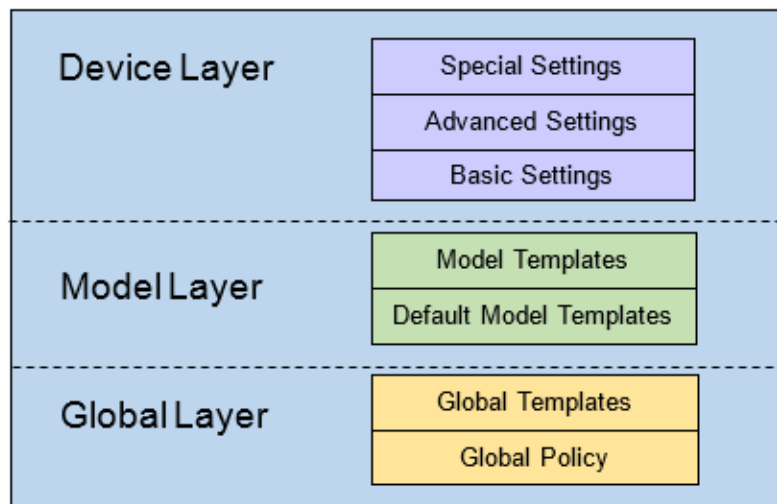

Figure 49: Zero Config Configuration Architecture for End Point Device

The configuration options in model layer and device layer have all the option in global layers already, i.e., the options in global layer is a subset of the options in model layer and device layer. If an option is set in all three layers with different values, the highest layer value will override the value in lower layer. For example, if the user selects English for Language setting in Global Policy and Spanish for Language setting in Default Model Template, the language setting on the device to be provisioned will use Spanish as model layer has higher priority than global layer. To sum up, configurations in higher layer will always override the configurations for the same options/fields in the lower layer when presented at the same time.

After understanding the zero-config configuration architecture, users could configure the available options for end point devices to be provisioned by the FCM630A by going through the three layers. This configuration architecture allows users to set up and manage the FIBERME end point devices in the same LAN area in a centralized way.

Auto Provisioning Settings

By default, the Zero Config feature is enabled on the FCM630A for auto provisioning. Three methods of auto provisioning are used.

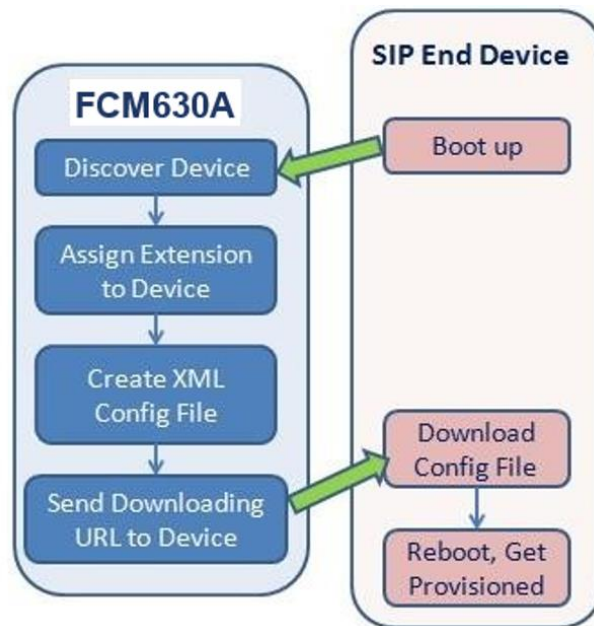

Figure 50: FCM630A Zero Config

- **SIP SUBSCRIBE**

When the phone boots up, it sends out SUBSCRIBE to a multicast IP address in the LAN. The FCM630A discovers it and then sends a NOTIFY with the XML config file URL in the message body. The phone will then use the path to download the config file generated in the FCM630A and take the new configuration.

- **DHCP OPTION 66**

Route mode needs to be set to use this feature. When the phone restarts (by default DHCP Option 66 is turned on), it will send out a DHCP DISCOVER request. The FCM630A receives it and returns DHCP OFFER with the config server path URL in Option 66, for example, <https://192.168.2.1:8089/zccgi/>. The phone will then use the path to download the config file generated in the FCM630A.

- **mDNS**

When the phone boots up, it sends out mDNS query to get the TFTP server address. The FCM630A will respond with its own address. The phone will then send TFTP request to download the XML config file from the FCM630A.

To start the auto provisioning process, under Web GUI→Value-added Features→Zero Config→Zero Config Settings, fill in the auto provision information.

Figure 51: Auto Provision Settings

Table 25: Auto Provision Settings

<p>Enable Zero Config</p>	<p>Enable or disable the zero-config feature on the PBX. The default setting is enabled.</p>
<p>Enable Automatic Configuration Assignment</p>	<p>By default, this is disabled. If disabled, when SIP device boots up, the FCM630A will not send the SIP device the URL to download the config file and therefore the SIP device will not be automatically provisioned by the FCM630A.</p> <p style="text-align: center;">Note:</p> <p>When disabled, SIP devices can still be provisioned by manually sending</p>

	NOTIFY from the FCM630A which will include the XML config file URL for the SIP device to download.
Auto Assign Extension	If enabled, when the device is discovered, the PBX will automatically assign an extension within the range defined in "Zero Config Extension Segment" to the device. The default setting is disabled.
Zero Config Extension Segment	Click on the link "Zero Config Extension Segment" to specify the extension range to be assigned if "Automatically Assign Extension" is enabled. The default range is 5000-6299. Zero Config Extension Segment range can be defined in Web GUI → PBX Settings → General Settings → General page → Extension Preference section: "Auto Provision Extensions".
Enable Pick Extension	If enabled, the extension list will be sent out to the device after receiving the device's request. The default setting is disabled.
Pick Extension Segment	Click on the link "Pick Extension Segment" to specify the extension list to be sent to the device. The default range is 4000 to 4999. Pick Extension Segment range can be defined in Web GUI → PBX Settings → General Settings → General page → Extension Preference section: "Pick Extensions".
Pick Extension Period (hour)	Specify the number of minutes to allow the phones being provisioned to pick extensions.
Subnet Whitelist	<p>This feature allows the FCM to provision devices in different subnets other than FCM network.</p> <p>Enter subnets IP addresses to allow devices within these subnets to be provisioned. The syntax is <IP>/<CIDR>.</p> <p><u>Examples:</u></p> <p>10.0.0.1/8</p> <p>192.168.6.0/24</p> <p>Note: Only private IP ranges (10.0.0.0 172.16.0.0 192.168.0.0) are supported.</p>

Please make sure an extension is manually assigned to the phone or "Automatically Assign Extension" is enabled during provisioning. After the configuration on the FCM630A Web GUI, click on "Save" and "Apply Changes". Once the phone boots up and picks up the config file from the FCM630A, it will take the configuration right away.

Discovery

FIBERME endpoints are automatically discovered after bootup. Users could also manually discover device by specifying the IP address or scanning the entire LAN network. Three methods are supported to scan the devices.

- PING
- ARP
- SIP Message (NOTIFY)

Click on "Auto Discover" under Web GUI→Value-added Features→Zero Config→Zero Config, fill in the "Scan Method" and "Scan IP". The IP address segment will be automatically filled in based on the network mask detected on the FCM630A. If users need scan the entire network segment, enter 255 (for example, 192.168.40.255) instead of a specific IP address. Then click on "Save" to start discovering the devices within the same network. To successfully discover the devices, "Zero Config" needs to be enabled on the FCM630A WebGUI→Value-added Features→Zero Config→Auto Provisioning Settings.

Auto Discover
✕

The PBX can automatically discover new devices via ARP, PING or SIP Message by scanning the entire network segment or a single IP address.

PBX LAN/LAN1 192.168.5.147

Address:

Network Segment: 192.168.5.0 - 192.168.5.255

Broadcast IP: 192.168.5.255

Scan Method:

Subnet Whitelist:

Scan IP: . . .

Figure 52: Auto Discover

The following figure shows a list of discovered phones. The MAC address, IP Address, Extension (if assigned), Version, Vendor, Model, Connection Status, Create Config, Options (Edit /Delete /Update /Reboot /Access Device WebGUI) are displayed in the list.

<input type="checkbox"/>	MAC ADDRESS	IP ADDRESS	EXTENSION	VERSION	VENDOR	MODEL	CREATE CONFIG	OPTIONS

Figure 53: Discovered Devices

Uploading Devices List

Besides the built-in discovery method on the FCM, users could prepare a list of devices on .CSV file and upload it by clicking on the button "Import", after which a success message prompt should be displayed. Users need to make sure that the CSV file respects the format as shown on the following figure and that the entered information is correct (valid IP address, valid MAC address, device model and an existing account), otherwise the FCM will reject the file and the operation will fail:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
1	===== Device Start =====													
2	config_na	vendor	state	ip	account_s	file_url	url_param	last_acces	mac	version	ad_state	model	hot_deski	port
3		FIBERME	1	192.168.99.141		https://192.168.99.2	#####	C074AD5E	1.0.3.36		0	FAP2601	no	5080
4														
5	===== Device Start =====

7		FIBERME	1	192.168.99.34		https://192.168.99.2	#####	C074AD72	1.0.3.36		0	FAP2602P	no	5080

Figure 54: Device List - CSV file Sample

Managing Discovered Devices

- **Sorting:** Press ▲ or ▼ to sort per MAC Address, IP Address, Version, Vendor, Model or CreateConfig columns from lower to higher or higher to lower, respectively.

Filter:

- **Filter:** Select a filter to display corresponding results.
 - **All:** Display all discovered devices.
 - **Scan Results:** Display only manually discovered devices. [Discovery]
 - **IP Address:** Enter device IP and press **Search** button.
 - **MAC Address:** Enter device MAC and press **Search** button.
 - **Model:** Enter a model name and press Search button. Example: FAP2601.
 - **Extension:** Enter the extension number and press Search button.

Zero Config

Zero Config | Global Policy | Global Templates | Model Templates | Model Update | Zero Config Settings

Total: 2 | 30 / page ▾ | Goto 1

Figure 55: Managing Discovered Devices

From the main menu of zero config, users can perform the following operations:

- Click on **Auto Discover** in order to access to the discovery menu as shown on *[Discovery]* section.
- Click on **Add** to add a new device to zero config database using its MAC address.
- Click on **Delete** to delete selected devices from the zero-config database.
- Click on **Edit** to modify selected devices.
- Click on **Update Config** to batch update a list of devices, the FCM on this case will send SIP NOTIFY message to all selected devices in order to update them at once.
- Click on **Reboot** to reboot selected devices (the selected devices, should have been provisioned with extensions since the phone will authenticate the server which is trying to send it reboot command).
- Click on **Reset** to clear all devices configurations.
- Click on **Import** to upload CSV file containing list of devices.
- Click on **Export** to export CSV file containing list of devices. This file can be imported to another FCM to quickly set it up with the original FCM's devices.
- Click on **Copy** to copy configuration from one device to another. This can be useful for easily replacing devices and note that this feature works only between devices of same model.

All these operations will be detailed on the next sections.

Global Configuration

Global configuration will apply to all the connected FIBERME SIP end point devices in the same LAN with the FCM630A no matter what the FIBERME device model it is. It is divided into two levels:

- **Global Policy**
- **Global Templates**

Note: **Global Templates** configuration has higher priority to **Global Policy** configuration.

Global Policy

Global Policy can be accessed in Web GUI→Value-added Features→Zero Config→Global Policy page. On the top of the configuration table, users can select category in the “Options” dropdown list to quickly navigate to the category. The categories are:

- **Localization:** configure display language, data, and time.
- **Phone Settings:** configure dial plan, call features, NAT, call progress tones and etc.
- **Contact List:** configure LDAP and XML phonebook download.
- **Maintenance:** configure upgrading, web access, Telnet/SSH access and syslog.
- **Network Settings:** configure IP address, QoS and STUN settings.
- **Customization:** customize LCD screen wallpaper for the supported models.
- **Communication Settings:** configure Email and FTP settings

Select the checkbox on the left of the parameter you would like to configure to activate the dropdown list for this parameter.

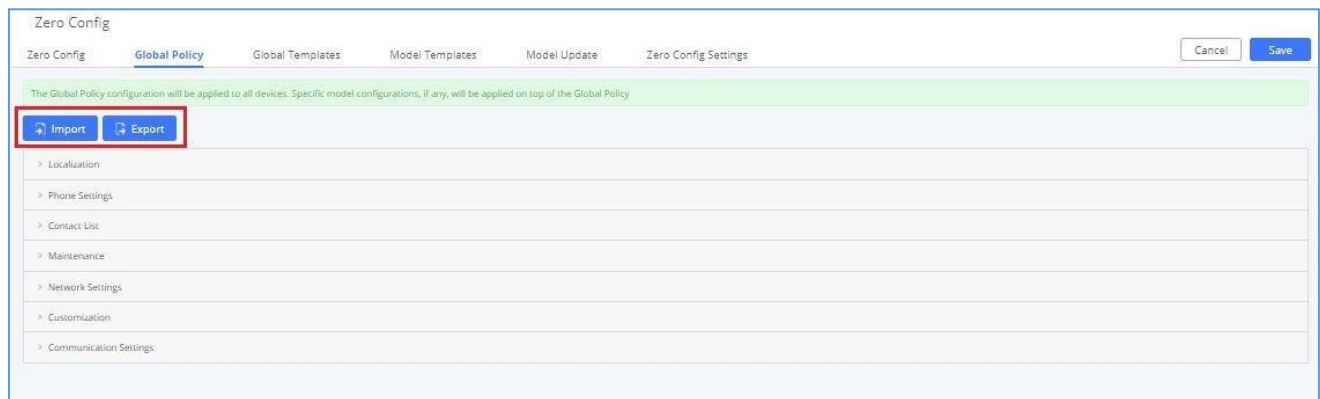

Figure 56: Global Policy Categories

The following tables list the Global Policy configuration parameters for the SIP end device

Table 26: Global Policy Parameters – Localization

Language settings	
Language	Select the LCD display language on the SIP end device.
Date and Time	
Date Format	Configure the date display format on the SIP end device's LCD.
Time Format	Configure the time display in 12-hour or 24-hour format on the SIP end device's LCD.
Enable NTP	To enable the NTP service.
NTP Server	Configure the URL or IP address of the NTP server. The SIP end device may obtain the date and time from the server.
NTP Update Interval	Configure the NTP update interval.
Time Zone	Configure the time zone used on the SIP end device.
Enable Daylight Saving Time	Select either to enable or disable the DST.

Table 27: Global Policy Parameters – Phone Settings

Default Call Settings	
Dial Plan	Configure the default dial plan rule. For syntax and examples, please refer to user manual of the SIP devices to be provisioned for more details.
Enable Call Features	When enabled, "Do Not Disturb", "Call Forward" and other call features can be used via the local feature code on the phone. Otherwise, the ITSP feature code will be used.
Use # as Dial Key	If set to "Yes", pressing the number key "#" will immediately dial out the input digits.
Auto Answer by Call-info	If set to "Yes", the phone will automatically turn on the speaker phone to answer incoming calls after a short reminding beep, based on the SIP Call-Info header sent from the server/proxy. The default setting is enabled.

NAT Traversal	Configure if NAT traversal mechanism is activated.
User Random Port	If set to “Yes”, this parameter will force random generation of both the local SIP and RTP ports.
General Settings	
Call Progress Tones	<p>Configure call progress tones including ring tone, dial tone, second dial tone, message waiting tone, ring back tone, call waiting tone, busy tone and reorder tone using the following syntax:</p> <p>f1=val, f2=val[, c=on1/ off1[- on2/ off2[- on3/ off3]]];</p> <ul style="list-style-type: none"> • Frequencies are in Hz and cadence on and off are in 10ms). • “on” is the period (in ms) of ringing while “off” is the period of silence. Up to three cadences are supported. • Please refer to user manual of the SIP devices to be provisioned for more details
HEADSET Key Mode	Select “Default Mode” or “Toggle Headset/Speaker” for the Headset key. Please refer to user manual of the SIP devices to be provisioned for more details.

Table 28: Global Policy Parameters – Contact List

LDAP Phonebook	
Source	<p>Select “Manual” or “PBX” as the LDAP configuration source.</p> <ul style="list-style-type: none"> • If “Manual” is selected, the LDAP configuration below will be applied to the SIP end device. • If “PBX” is selected, the LDAP configuration built-in from FCM630A Web GUI→System Settings→LDAP Server will be applied.
Address	Configure the IP address or DNS name of the LDAP server.
Port	Configure the LDAP server port. The default value is 389.
Base DN	This is the location in the directory where the search is requested to begin. Example:

	<ul style="list-style-type: none"> • dc=fiberme, dc=com • ou=Boston, dc=fiberme, dc=com
Username	Configure the bind “Username” for querying LDAP servers. The field can be left blank if the LDAP server allows anonymous binds.
Password	Configure the bind “Password” for querying LDAP servers. The field can be left blank if the LDAP server allows anonymous binds.
Number Filter	Configure the filter used for number lookups. Please refer to user manual for more details.
Name Filter	Configure the filter used for name lookups. Please refer to user manual for more details.
Version	Select the protocol version for the phone to send the bind requests. The default value is 3.
Name Attribute	<p>Specify the “name” attributes of each record which are returned in the LDAP search result.</p> <p>Example:</p> <p>gn</p> <p>cn sn description</p>
Number Attribute	<p>Specify the “number” attributes of each record which are returned in the LDAP search result.</p> <p>Example:</p> <p>telephoneNumber</p> <p>telephoneNumber Mobile</p>
Display Name	<p>Configure the entry information to be shown on phone’s LCD. Up to 3 fields can be displayed.</p> <p>Example:</p> <p>%cn %sn %telephoneNumber</p>

Max Hits	Specify the maximum number of results to be returned by the LDAP server. Valid range is 1 to 3000. The default value is 50.
Search Timeout	Specify the interval (in seconds) for the server to process the request and client waits for server to return. Valid range is 0 to 180. Default value is 30.
Sort Results	Specify whether the searching result is sorted or not. Default setting is No.
Incoming Calls	Configure to enable LDAP number searching when receiving calls. The default setting is No.
Outgoing Calls	Configure to enable LDAP number searching when making calls. The default setting is No.
Lookup Display Name	Configures the display name when LDAP looks up the name for incoming call or outgoing call. It must be a subset of the LDAP Name Attributes.
XML Phonebook	
Phonebook XML Server	<p>Select the source of the phonebook XML server.</p> <ul style="list-style-type: none"> • Disable <p>Disable phonebook XML downloading.</p> <ul style="list-style-type: none"> • Manual <p>Once selected, users need specify downloading protocol HTTP, HTTPS or TFTP and the server path to download the phonebook XML file. The server path could be IP address or URL, with up to 256 characters.</p> <ul style="list-style-type: none"> • Local FCM Server <p>Once selected, click on the Server Path field to upload the phonebook XML file. Please note after uploading the phonebook XML file to the server, the original file name will be used as the directory name and the file will be renamed as phonebook.xml under that directory.</p>
Phonebook Download Interval	Configure the phonebook download interval (in Minute). If set to 0, automatic download will be disabled. Valid range is 5 to 720.

Remove manually edited entries on download

If set to “Yes”, when XML phonebook is downloaded, the entries added manually will be automatically removed.

Table 29: Global Policy Parameters – Maintenance

Upgrade and Provision	
Firmware Source	<p>Firmware source via ZeroConfig provisioning could a URL for external server address, local FCM directory or USB media if plugged in to the FCM630A. Select a source to get the firmware file:</p> <ul style="list-style-type: none"> <li style="text-align: center;">• URL <p>If select to use URL to upgrade, complete the configuration for the following four parameters: “Upgrade Via”, “Server Path”, “File Prefix” and “File Postfix”.</p> <ul style="list-style-type: none"> <li style="text-align: center;">• Local FCM Server <p>Firmware can be uploaded to the FCM630A internal storage for firmware upgrade. If selected, click on “Manage Storage” icon next to “Directory” option, upload firmware file and select directory for the end device to retrieve the firmware file.</p> <ul style="list-style-type: none"> <li style="text-align: center;">• Local USB Media <p>If selected, the USB storage device needs to be plugged into the FCM630A and the firmware file must be put under a folder named “ZC_firmware” in the USB storage root directory.</p> <ul style="list-style-type: none"> <li style="text-align: center;">• Local SD Card Media <p>If selected, an SD card needs to be plugged into the FCM630A and the firmware file must be put under a folder named “ZC_firmware” in the USB storage root directory.</p>
Upgrade via	When URL is selected as firmware source, configure upgrade via TFTP, HTTP or HTTPS.
Server Path	When URL is selected as firmware source, configure the firmware

	upgrading server path.
File Prefix	Configure the Config Server Path.
Config Server Path	When URL is selected as firmware source, configure the firmware file postfix. If configured, only the configuration file with the matching encrypted postfix will be downloaded and flashed into the phone.
Allow DHCP Option 43/66	If DHCP option 43 or 66 is enabled on the LAN side, the TFTP server can be redirected.
Automatic Upgrade	<p>If enabled, the end point device will automatically upgrade if a new firmware is detected. Users can select automatic upgrading by day, by week or by minute.</p> <ul style="list-style-type: none"> By week Once selected, specify the day of the week to check HTTP/TFTP server for firmware upgrades or configuration files changes. By day Once selected, specify the hour of the day to check the HTTP/TFTP server for firmware upgrades or configuration files changes. By minute Once selected, specify the interval X that the SIP end device will request for new firmware every X minutes.
Firmware Upgrade Rule	Specify how firmware upgrading and provisioning request to be sent.
Zero Config	Select either to enable or disable zero config.
Web Access	
Admin Password	Configure the administrator password for admin level login.
End-User Password	Configure the end-user password for the end user level login.
Web Access Mode	Select HTTP or HTTPS as the web access protocol.
Web Server Port	Configure the port for web access.

	The valid range is 1 to 65535.
RTSP Port	Configure the RTSP Port.
Enable UPnP Discovery	Select either to enable or disable Enable UPnP Discovery
Login Settings	Configure the login settings.
User Login Timeout	Configure User Login Timeout.
Maximum ConsecutiveFailed Login Attempts	Configure Maximum Consecutive Failed Login Attempts.
Login Error Lock Time	Configure Login Error Lock Time.
Security	
Disable Telnet/SSH	Enable Telnet/SSH access for the SIP end device. If the SIP end device supports Telnet access, this option controls the Telnet access of the device; if the SIP end device supports SSH access, this option controls the SSH access of the device.
Syslog	
Syslog Server	Configure the URL/IP address for the syslog server.
Syslog Level	Select the level of logging for syslog.
Send SIP Log	Configure whether the SIP log will be included in the syslog message.

Table 30: Global Policy Parameters – Network Settings

Basic Settings	
IP Address	<p>Configure how the SIP end device shall obtain the IP address. DHCP or PPPoE can be selected.</p> <ul style="list-style-type: none"> • DHCP <p>Once selected, users can specify the Host Name (option 12) of the SIP end device as DHCP client, and Vendor Class ID (option 60) used by the client and server to exchange vendor class ID information.</p>

	<ul style="list-style-type: none"> • PPPoE Once selected, users need specify the Account ID, Password and Service Name for PPPoE.
Host Name	Specifies the name of the client. This field is optional but may be required by Internet Service Providers.
Vendor Class ID	Used by clients and servers to exchange vendor class ID.
Account ID	Enter the PPPoE account ID.
Password	Enter the PPPoE Password.
Service Name	Enter the PPPoE Service Name.
Advanced Setting	
Layer 3 QoS	Define the Layer 3 QoS parameter. This value is used for IP Precedence, Diff-Serv or MPLS. Valid range is 0-63.
Layer 3 QoS For RTP	Assign the priority value of the Layer 3 QoS for RTP packets. Valid range is 0 -63.
Layer 3 QoS For SIP	Assign the priority value of the Layer 3 QoS for SIP packets. Valid range is 0 -63.
Layer 2 QoS Tag	Assign the VLAN Tag of the Layer 2 QoS packets. Valid range is 0 -4095.
Layer 2 QoS Priority Value	Assign the priority value of the Layer 2 QoS packets. Valid range is 0-7.
STUN Server	Configure the IP address or Domain name of the STUN server. Only non-symmetric NAT routers work with STUN.
Keep Alive	Select either to enable or disable Keep Alive.
Keep Alive Interval	Specify how often the phone will send a blank UDP packet to the SIP server in order to keep the “ping hole” on the NAT router to open. Valid range is

	10-160.
Register Expiration	Specify the Register Expiration.
Local SIP Port	Configure Local SIP Port.
Local RTP Port	Configure Local RTP Port.
Auto On-Hook Timer(s)	Configure Auto On-Hook Timer(s).
Ring Timeout	Configure Ring Timeout.
SIP Transport	Select either UDP, TCP or TLS/TCP as SIP transport protocol.
Direct IP Call	Select either to disable or enable Direct IP Call support.
SIP Proxy Compatibility Mode	Select either to disable or enable SIP Proxy Compatibility Mode.
Unregister On Reboot	Select either to disable or enable Unregister On Reboot.
Whitelist	
Whitelist	Select either to enable or disable Whitelist
SIP Phone Number Whitelist	Configure the SIP Phone Number Whitelist.

Global Templates

Global Templates can be accessed in Web GUI→Value-added Features→Zero Config→Global Templates. Users can create multiple global templates with different sets of configurations and save the templates. Later on, when the user configures the device in Edit Device dialog→Advanced Settings, the user can select to use one of the global templates for the device. Please refer to section [\[Manage Devices\]](#) for more details on using the global templates.

When creating global template, users can select the categories and the parameters under each category to be used in the template. The global policy and the selected global template will both take effect when generating the config file. However, the selected global template has higher priority to the global policy when it comes to the same setting option/field. If the same option/field has different value configured in the global policy and the selected global template, the value for this option/field in the selected global template will override the value in global policy.

Click on "Add" to add a global template. Users will see the following configurations.

Table 33: Create New Template

Template Name	Create a name to identify this global template.
Description	Provide a description for the global template. This is optional.
Active	Check this option to enable the global template.

- Click on  to edit the global template.

The window for editing global template is shown in the following figure. In the “Options” field, after entering the option name key word, the options containing the key word will be listed. Users could then select the options to be modified under the global template.

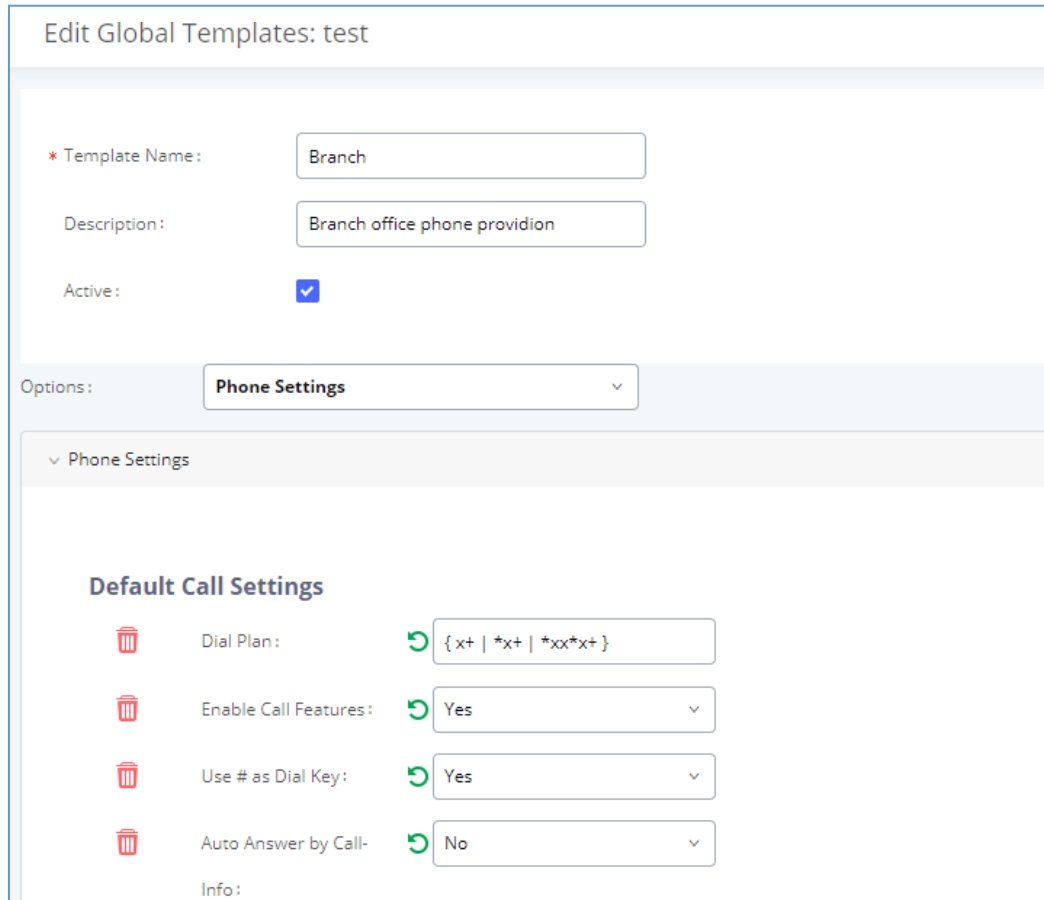

Figure 57: Edit Global Template

The added options will show in the list. Users can then enter or select value for each option to be used in the global template. On the left side of each added option, users can click on  to delete this option from the template. On the right side of each option, users can click on  to reset the option value to the default value.

Click on “Save” to save this global template.

- The created global templates will show in the Web GUI → Value-added Features → Zero Config → Global

Templates page. Users can click on  to delete the global template or delete multiple selected templates at once.

- Click on “Toggle Selected Template(s)” to toggle the status between enabled/disabled for the selected templates.

Model configuration

Model templates

Model layer configuration allows users to apply model-specific configurations to different devices. Users could create/edit/delete a model template by accessing Web GUI, page Value-added Features→Zero Config→Model Templates. If multiple model templates are created and enabled, when the user configures the device in Edit Device dialog→Advanced Settings, the user can select to use one of the model templates for the device. Please refer to section [\[Manage Devices\]](#) for more details on using the model template.

For each created model template, users can assign it as default model template. If assigned as default model template, the values in this model template will be applied to all the devices of this model. There is always only one default model template that can be assigned at one time on the FCM630A.

The selected model template and the default model template will both take effect when generating the config file for the device. However, the model template has higher priority to default model template when it comes to the same setting option/field. If the same option/field has different value configured in the default model template and the selected model template, the value for this option/field in the selected model template will override the value in default model template.

- Click on “Add” to add a model template.

Table 34: Create New Model Template

Model	Select a model to apply this template. The supported FIBERME models are listed in the dropdown list for selection.
Template Name	Create a name for the model template.
Description	Enter a description for the model template. This is optional.
Default Model Template	Select to assign this model template as the default model template. The value of the option in default model template will be overridden if other selected model template has a different value for the same option.
Active	Check this option to enable the model template.

- Click on  to edit the model template.

The editing window for model template is shown in the following figure. In the “Options” field, enter the optionname key word, the option that contains the key word will be listed. User could then select the option to be modified under the model template.

Once added, the option will be shown in the list below. On the left side of each option, users can click on  to remove this option from the model template. On the right side of each option, users can click on  to reset the option to the default value.

User could also click on “Add New Field” to add a P value number and the value to the configuration. The following figure shows setting P value “P1362” to “en”, which means the display language on the LCD is set to English.

Figure 58: Edit Model Template

- Click on Save when done. The model template will be displayed on Web GUI→**Value-added Features**→**Zero Config**→**Model Templates** page.
- Click on  to delete the model template or click on “Delete Selected Templates” to delete multiple selected templates at once.
- Click on “Toggle Selected Template(s)” to toggle the status between enabled/disabled for the selected model templates.
- Click the "Copy Template" button to copy the configuration items of the selected model template to another template, thereby reducing template editing work. Note: The model template only supports copying between devices of the same model.
- Click the "Import/Export" button to upload/export the model template list in .CSV format.

Model Update

FCM630A zero config feature supports provisioning all models of FIBERME SIP end devices including OEM device models.

OEM Models

Users can associate OEM device models with their original FIBERME -branded models, allowing these OEM devices to be provisioned appropriately.

- Click on  button.
- In the *Source Model* field, select the FIBERME device that the OEM model is based on from the dropdown list.
- For the *Destination Model* and *Destination Vendor* field, enter the custom OEM model name and vendor name.
- The newly added OEM model should now be selectable as an option in *Model* fields.

OEM Models

Use to reuse the exist model as an other name.

Figure 59: OEM Models

Model Template Package List

Templates for most of the FIBERME models are built in with the FCM630A already.

- Click on  to download the template.
- Click on  to upgrade the model template. Users will see this icon available if the device model hastemplate updated in the FCM630A.

VENDOR	MODEL	VERSION (REMOTE/LOCAL)	SIZE	OPTIONS
FIBERME	FAP2601	1.0/1.0	94K	⬆
FIBERME	FAP2601P	1.0/1.0	94K	⬆
FIBERME	FAP2602P	1.0/1.0	101K	⬆

Figure 60: Template Management

Upload Model Template Package

In case the FCM630A is placed in the private network and Internet access is restricted, users will not be able to get packages by downloading and installing from the remote server. Model template package can be manually uploaded from local device through Web GUI. Please contact FIBERME customer support if the model package is needed for manual uploading.

Upload Model Template Package

Choose Model Package to

Upload:

Figure 61: Upload Model Template Manually

Device Configuration

On Web GUI, page **Value-added Features→Zero Config→Zero Config**, users could create new device, delete existing device(s), make special configuration for a single device, or send NOTIFY to existing device(s)

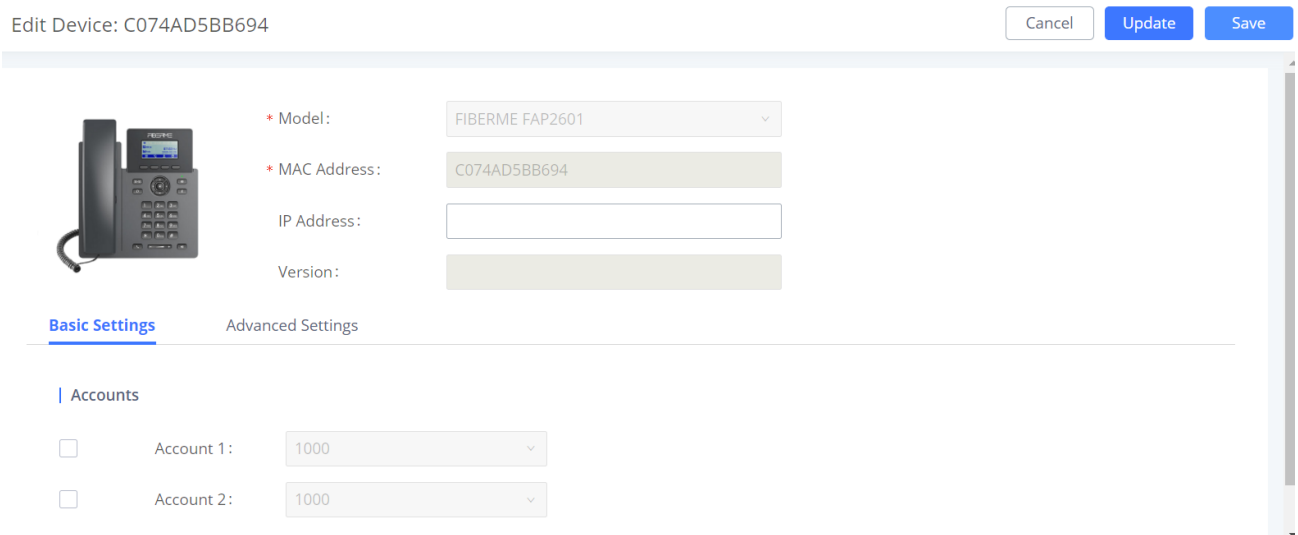

Create New Device

Besides configuring the device after the device is discovered, users could also configure basic settings before the device is discovered by the FCM630A. Once the device is plugged in, it can then be discovered and provisioned. This gives the system administrator adequate time to set up each device beforehand.

Click on "Add" and the following dialog will show. Follow the steps below to create the configurations for the new device.

1. Firstly, select a model for the device to be created and enter its MAC address, IP address and firmware version (optional) in the corresponding field.
2. Basic settings will show a list of settings based on the model selected in step 1. Users could assign extensions to accounts, assign functions to Line Keys and Multiple-Purposed Keys if supported on the selected model.
3. Click on "save" to save the configuration for this device.

Figure 64: Edit Device

A preview of the “Advanced” settings is shown in the above figure. There are five levels configurations as described in (1) (2) (3) (4) (5) below, with priority from the lowest to the highest. The configurations in all levels will take effect for the device. If there are same options existing in different level configurations with different value configured, the higher-level configuration will override the lower-level configuration.

(1) Global Policy

This is the lowest level configuration. The global policy configured in Web GUI→**Value-added Features**→**Zero Config**→**Global Policy** will be applied here. Clicking on “Modify Global Policy” to redirect to page **Value-added Features**→**Zero Config**→**Global Policy**.

(2) Global Templates

Select a global template to be used for the device and click on  to add. Multiple global templates can be selected, and users can arrange the priority by adjusting orders via  and . All the selected global templates will take effect. If the same option exists on multiple selected global templates, the value in the template with higher priority will override the one in the template with lower priority. Click on

 to remove the global template from the selected list.

(3) Default Model Template

Default Model Template will be applied to the devices of this model. Default model template can be configured in model template under Web GUI→**Value-added Features**→**Zero Config**→**Model Templates** page. Please see default model template option in **[Table 37: Create New Model Template]**.

(4) Model Templates

Select a model template to be used for the device and click on  to add. Multiple model templates can be selected, and users can arrange the priority by adjusting orders via  and . All the selected

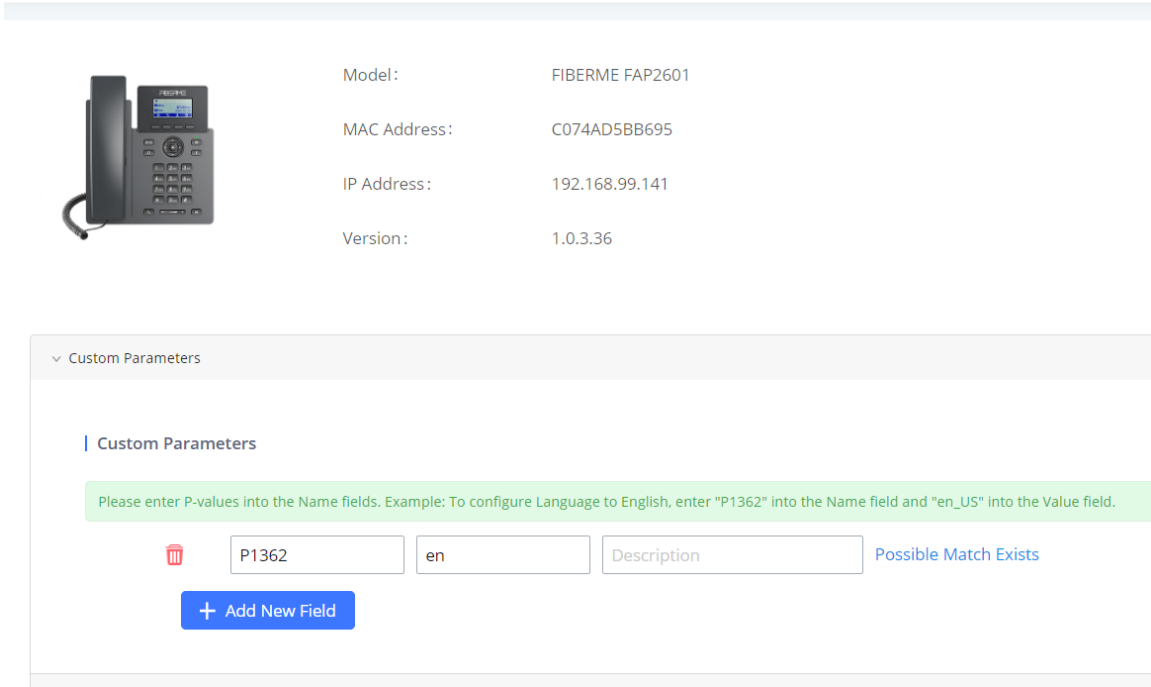

model templates will take effect. If the same option exists on multiple selected model templates, the value in the template with higher priority will override the one in the template with lower priority. Click on

 to remove the model template from the selected list.

(5) Customize Device Settings

This is the highest-level configuration for the device. Click on “Modify Customize Device Settings” and following dialog will show.

The screenshot displays the configuration interface for a device. On the left is an image of a black FIBERME FAP2601 IP phone. To its right, the following details are listed:

Model:	FIBERME FAP2601
MAC Address:	C074AD5BB695
IP Address:	192.168.99.141
Version:	1.0.3.36

Below this is a section titled 'Custom Parameters'. It contains a green instruction box: 'Please enter P-values into the Name fields. Example: To configure Language to English, enter "P1362" into the Name field and "en_US" into the Value field.' Below this is a form with three input fields: 'P1362', 'en', and 'Description'. A blue button '+ Add New Field' is positioned below the first two fields. To the right of the 'Description' field, the text 'Possible Match Exists' is displayed in blue.

Figure 65: Edit Customize Device Settings

Scroll down in the dialog to view and edit the device-specific options. If the users would like to add more options which are not in the pre-defined list, click on "Add New Field" to add a P value number and the value to the configuration. The above figure shows setting P value "P1362" to "en", which means the display language on the LCD is set to English. The warning information on right tells that the option matching the P value number exists and clicking on it will lead to the matching option.

- Select multiple devices that need to be modified and then click on "Update Config" to batch modify devices.

If selected devices are of the same model. Configurations in five levels are all available for users to modify.

If selected devices are of different models, the configuration dialog is like the following figure. Click on  to view more devices of other models. Users are only allowed to make modifications in Global Templates and Global Policy level.

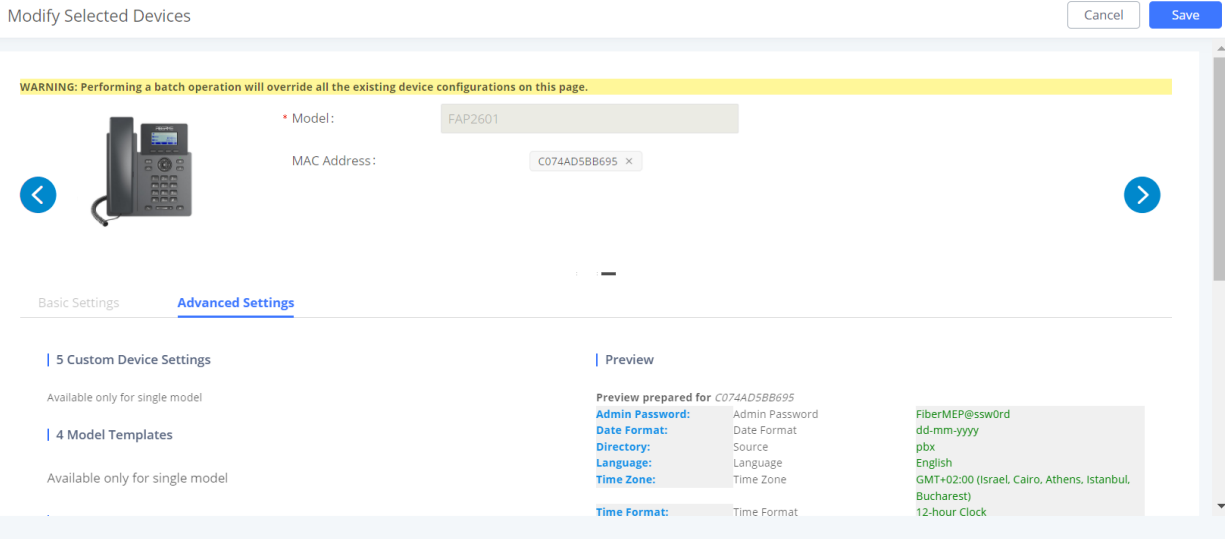

Figure 66: Modify Selected Devices - Different Models

Note: Performing batch operation will override all the existing device configuration on the page.

After the above configurations, save the changes and go back to Web GUI → Value-added Features → Zero Config → Zero Config page. Users could then click on  to send NOTIFY to the SIP end point device and trigger the provisioning process. The device will start downloading the generated configuration file from the URL contained in the NOTIFY message.

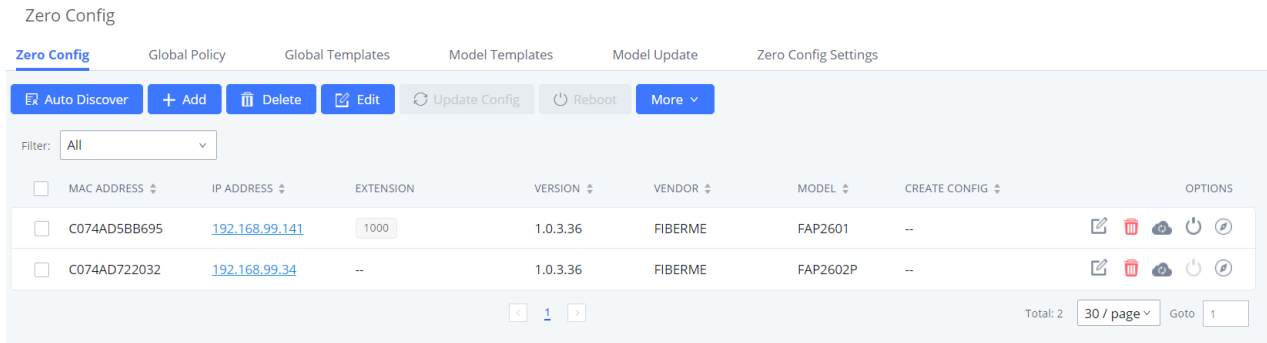

Figure 67: Device List in Zero Config

In this web page, users can also click on “Reset All Extensions” to reset the extensions of all the devices.

Sample Application

Assuming in a small business office where there are 8 FAP2601 phones used by customer support and 1 FAP2602P phone used by customer support supervisor. 3 of the 8 customer support members speak Spanish and the rest speak English. We could deploy the following configurations to provisioning the office phones for the customer support team.

1. Go to Web GUI→**Value-added Features**→**Zero Config**→**Zero Config Settings**, select “Enable ZeroConfig”.
2. Go to Web GUI→**Value-added Features**→**Zero Config**→**Global Policy**, configure Date Format, TimeFormat and Firmware Source as follows.

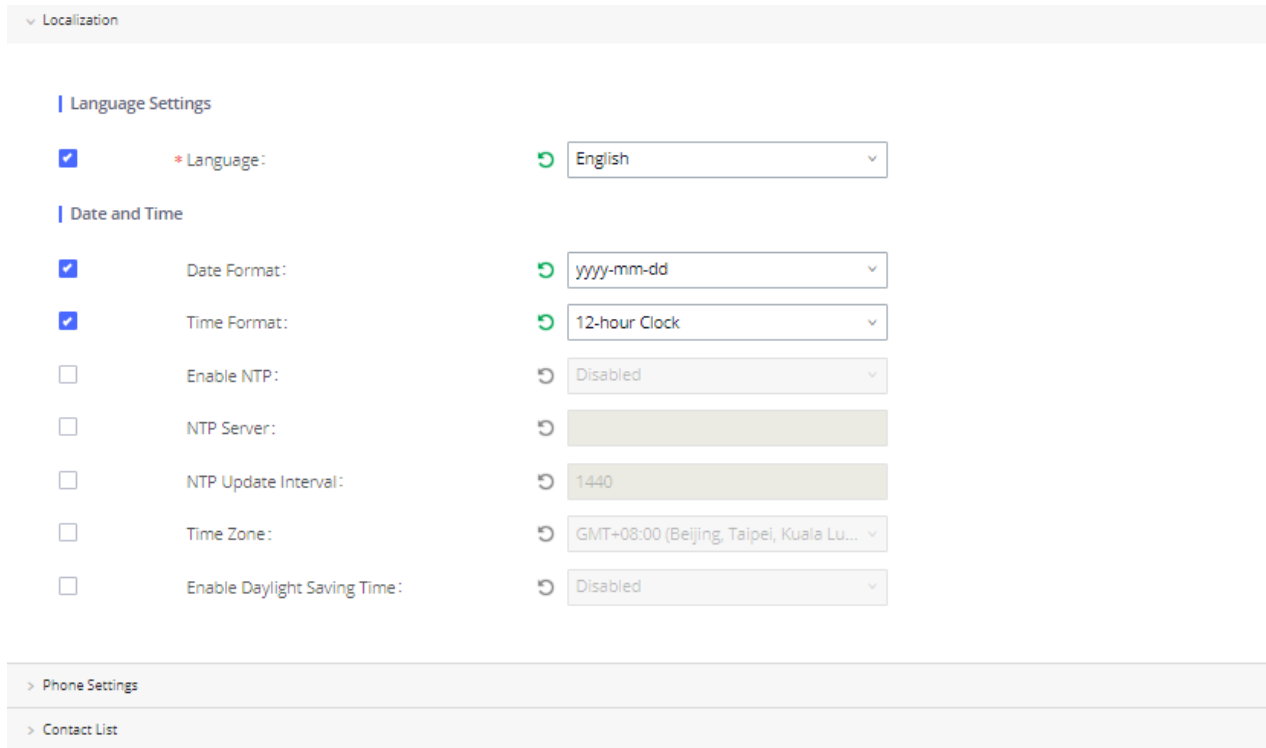

Figure 68: Zero Config Sample - Global Policy

3. Go to Web GUI→**Value-added Features**→**Zero Config**→**Model Templates**, create a new model template“English Support Template” for FAP2601. Add option “Language” and set it to “English”. Then select the option “Default Model Template” to make it the default model template.
4. Go to Web GUI→**Value-added Features**→**Zero Config**→**Model Templates**, create another model template“Spanish Support Template” for FAP2602P. Add option “Language” and set it to “Español”.

- After 9 devices are powered up and connected to the LAN network, use “Auto Discover” function or “Create New Device” function to add the devices to the device list on Web GUI→**Value-added Features**→**Zero Config**→**Zero Config**.
- On Web GUI→**Value-added Features**→**Zero Config**→**Zero Config** page, users could identify the devices by their MAC addresses or IP addresses displayed on the list. Click on  to edit the device settings.
- For each of the 5 phones used by English speaking customer support, in “Basic settings” select an available extension for account 1 and click on “Save”. Then click on “Advanced settings” tab to bring up the following dialog. Users will see the English support template is applied since this is the default model template. A preview of the device settings will be listed on the right side.

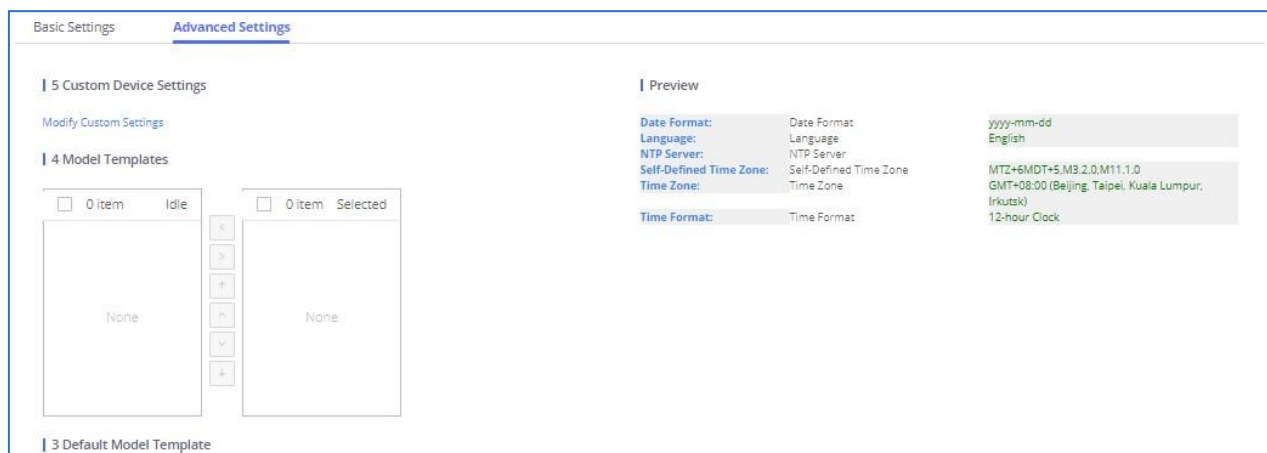

Figure 69: Zero Config Sample - Device Preview 1

- For the 3 phones used by Spanish support, in “Basic settings” select an available extension for account 1 and click on “Save”. Then click on “Advanced settings” tab to bring up the following dialog.

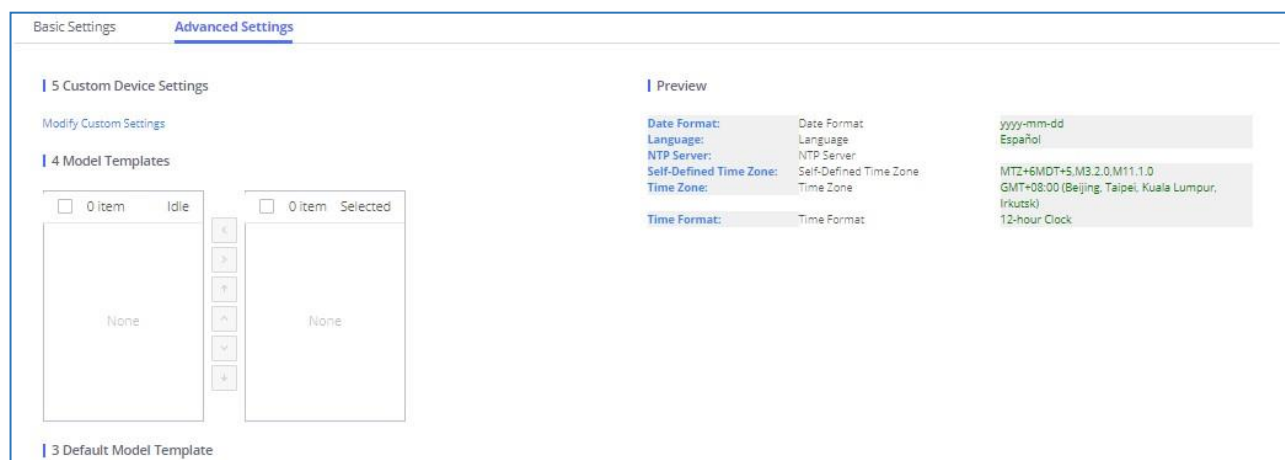

Figure 70: Zero Config Sample - Device Preview 2

Select “Spanish Support Template” in “Model Template”. The preview of the device settings is displayed on the right side and we can see the language is set to “Español” since Model Template has the higher priority for the option “Language”, which overrides the value configured in default model template.

9. For the FAP2602P used by the customer support supervisor, select an available extension for account 1 on “Basic settings” and click on “Save”. Users can see the preview of the device configuration in “Advanced settings”. There is no model template configured for FAP2602P.

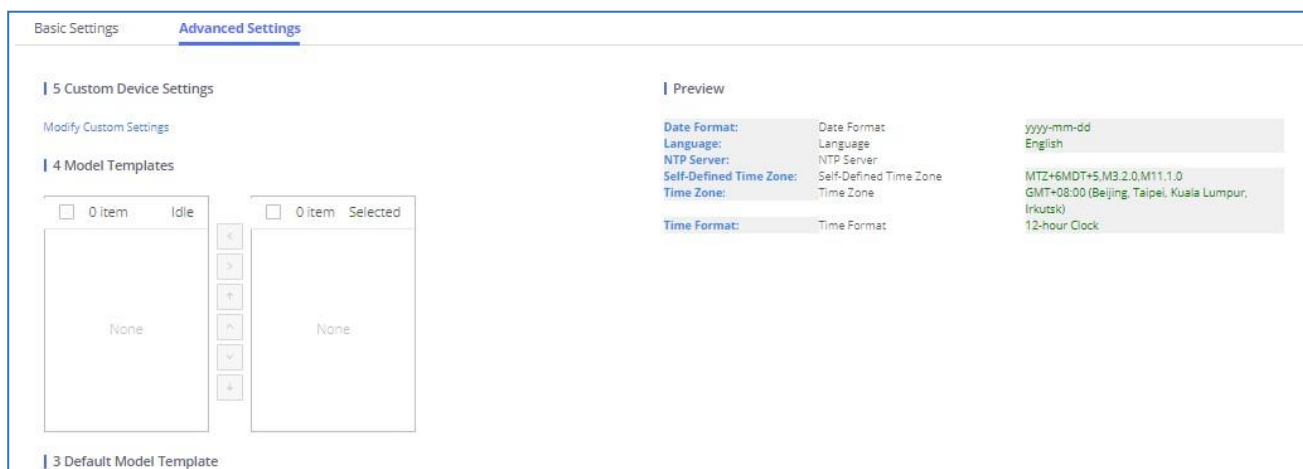

Figure 71: Zero Config Sample - Device Preview 3

10. Click on “Apply Changes” to apply saved changes.
11. On the Web GUI→Value-added Features→Zero Config→Zero Config page, click on  to send NOTIFY to trigger the device to download config file from FCM630A

Now all the 9 phones in the network will be provisioned with a unique extension registered on the FCM630A. 3 of the phones will be provisioned to display Spanish on LCD and the other 5 will be provisioned to display English on LCD. The FAP2602P used by the supervisor will be provisioned to use the default language on LCD display since it is not specified in the global policy.

Extension options are divided into four categories:

- Basic Settings
- Media
- Features
- Specific Time
- Follow me

Select first which type of extension: SIP Extension or IAX Extension. The configuration parameters are as follows.

Table 35: SIP Extension Configuration Parameters→Basic Settings

General	
Extension	The extension number associated with the user.
CallerID Number	<p>Configure the CallerID Number that would be applied for outbound calls from this user.</p> <p>Note:</p> <p>The ability to manipulate your outbound Caller ID may be limited by your VoIP provider.</p>
Privilege	<p>Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal".</p> <p>Note:</p> <p>Users need to have the same level as or higher level than an outbound rule's privilege to make outbound calls using this rule.</p>
SIP/IAX Password	Configure the password for the user. A random secure password will be automatically generated. It is recommended to use this password for security purpose.
Auth ID	Configure the authentication ID for the user. If not configured, the extension number will be used for authentication.
Voicemail	<p>Configure Voicemail. There are three valid options, and the default option is "Enable Local Voicemail".</p> <ul style="list-style-type: none"> • Disable Voicemail: Disable Voicemail. • Enable Local Voicemail: Enable voicemail for the user. • Enable Remote Voicemail: Forward the notify message from remote voicemail system for the user, and the local voicemail will be disabled. Note: Remote voicemail feature is used only for Informattec (Brazil).
Voicemail	Configure voicemail password (digits only) for the user to access the voicemail box.

Password	A random numeric password is automatically generated. It is recommended to use the random generated password for security purpose.
Skip Voicemail Password Verification	When user dials voicemail code, the password verification IVR is skipped. If enabled, this would allow one-button voicemail access. By default, this option is disabled.
Send Voicemail Email Notification	Configures whether or not to send emails to the extension's email address to notify of new voicemail.
Attach Voicemail to Email	Configures whether or not to attach voicemail audio file to the voicemail notification emails. Note: When set to "Default", the global settings in Call Features → Voicemail → Voicemail Email Settings will be used.
Keep Voicemail after Emailing	Whether to keep the local voicemail recording after sending them. If set to "Default", the global settings will be used. Note: When set to "Default", the global settings in Call Features → Voicemail → Voicemail Email Settings will be used.
Enable Keep-alive	If enabled, empty SDP packet will be sent to the SIP server periodically to keep the NAT port open. The default setting is "No".
Keep-alive Frequency	Configure the Keep-alive interval (in seconds) to check if the host is up. The default setting is 60 seconds.
Enable SCA	If enabled, (1) Call Forward, Call Waiting and Do Not Disturb settings will not work, (2) Concurrent Registrations can be set only to 1, and (3) Private numbers can be added in Call Features->SCA page.
Emergency CID Name	CallerID name that will be used for emergency calls and callbacks.
Disable This Extension	If selected, this extension will be disabled on the FCM630A. Note: The disabled extension still exists on the PBX but cannot be used on the end device.

User Settings	
First Name	<p>Configure the first name of the user.</p> <p>The first name can contain characters, letters, digits and _.</p>
Last Name	<p>Configure the last name of the user.</p> <p>The last name can contain characters, letters, digits and _.</p>
Email Address	<p>Fill in the Email address for the user. Voicemail will be sent to this Email address.</p>
User Password	<p>Configure the password for user portal access. A random numeric password is automatically generated. It is recommended to use the randomly generated password for security purpose.</p>
Language	<p>Select the voice prompt language to be used for this extension. The default setting is "Default" which is the selected voice prompt language under Web GUI→PBX Settings→Voice Prompt→Language Settings. The dropdown list shows all the current available voice prompt languages on the FCM630A. To add more languages in the list, please download voice prompt package by selecting "Check Prompt List" under Web GUI→PBX Settings→Voice Prompt→Language Settings.</p>
Concurrent Registrations	<p>The maximum endpoints which can be registered into this extension. the default value is 3.</p>
Mobile Phone Number	<p>Configure the phone number for the extension, user can type the related star code for phone number followed by the extension number to directly call this number.</p> <p>Example: user can type *881000 to call the mobile number associated with extension 1000.</p>

Table 36: SIP Extension Configuration Parameters→Media

SIP Settings	
NAT	Use NAT when the FCM630A is on a public IP communicating with devices hidden behind NAT (e.g., broadband router). If there is one-way audio issue, usually it is related to NAT configuration or Firewall's support of SIP and RTP ports. The default setting is enabled.
Enable Direct Media	By default, the FCM630A will route the media streams from SIP endpoints through itself. If enabled, the PBX will attempt to negotiate with the endpoints to route the media stream directly. It is not always possible for the FCM630A to negotiate endpoint-to-endpoint media routing. The default setting is "No".
DTMF Mode	Select DTMF mode for the user to send DTMF. The default setting is "RFC4733". If "Info" is selected, SIP INFO message will be used. If "Inband" is selected, a-law or u-law are required. When "Auto" is selected, RFC4733 will be used if offered, otherwise "Inband" will be used.
TEL URI	If the phone has an assigned PSTN telephone number, this field should be set to "User=Phone". "User=Phone" parameter will be attached to the Request-Line and "TO" header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel" will be used instead of "SIP" in the SIP request.
Alert-Info	When present in an INVITE request, the alert-Info header field specifies an alternative ring tone to the UAS.
Enable T.38 UDPTL	Enable or disable T.38 UDPTL support.
SRTP	Enable SRTP for the call. The default setting is disabled.
Jitter Buffer	<p>Select jitter buffer method.</p> <ul style="list-style-type: none"> • Disable: Jitter buffer will not be used. • Fixed: Jitter buffer with a fixed size (equal to the value of "jitter buffer size") • Adaptive: Jitter buffer with an adaptive size (no more than the value of "max jitter buffer"). • NetEQ: Dynamic jitter buffer via NetEQ.

Packet Loss Retransmission	<p>Configure to enable Packet Loss Retransmission.</p> <ul style="list-style-type: none"> • NACK • NACK+RTX(SSRC-GROUP) • OFF
Video FEC	Check to enable Forward Error Correction (FEC) for Video.
Audio FEC	Check to enable Forward Error Correction (FEC) for Audio.
FECC	Configure to enable Remote Camera Management.
ACL Policy	<p>Access Control List manages the IP addresses that can register to this extension.</p> <ul style="list-style-type: none"> • Allow All: Any IP address can register to this extension. • Local Network: Only IP addresses in the configured network segments can register to this extension. Press “Add Local Network Address” to add more IP segments.
Codec Preference	Select codec for the extension. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p, RTX and VP8.

Table 37: SIP Extension Configuration Parameters→Features

Call Transfer	
Presence Status	Select which presence status to set for the extension and configure call forward conditions for each status. Six possible options are possible: “ Available ”, “ Away ”, “ Chat ”, “ Custom ”, “ DND ” and “ Unavailable ”. More details at [PRESENCE].

<p>Call Forward Unconditional</p>	<p>Enable and configure the Call Forward Unconditional target number. Available options for target number are:</p> <ul style="list-style-type: none"> • “None”: Call forward deactivated. • “Extension”: Select an extension from dropdown list as CFU target. • “Custom Number”: Enter a customer number as target. For example: *97. • “Voicemail”: Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. • “Ring Group”: Select a ring group from dropdown list as CFU target. • “Queues”: Select a queue from dropdown list as CFU target. • “Voicemail Group”: Select a voicemail group from dropdown list as CFU target. <p>The default setting is “None”.</p>
<p>CFU Time Condition</p>	<p>Select time condition for Call Forward Unconditional. CFU takes effect only during the selected time condition. The available time conditions are ‘All’, ‘Office Time’, ‘Out of Office Time’, ‘Holiday’, ‘Out of Holiday’, ‘Out of Office Time or Holiday’, ‘Office Time and Out of Holiday’, ‘Specific Time’, ‘Out of Specific Time’, ‘Out of Specific Time or Holiday’, ‘Specific Time and Out of Holiday’.</p> <p>Note:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured under Specific Time section. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
<p>Call Forward No Answer</p>	<p>Configure the Call Forward No Answer target number. Available options for target number are:</p> <ul style="list-style-type: none"> • “None”: Call forward deactivated.

	<ul style="list-style-type: none"> • “Extension”: Select an extension from dropdown list as CFN target. • “Custom Number”: Enter a customer number as target. For example: *97. • “Voicemail”: Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. • “Ring Group”: Select a ring group from dropdown list as CFN target. • “Queues”: Select a queue from dropdown list as CFN target. • “Voicemail Group”: Select a voicemail group from dropdown list as CFN target. <p>The default setting is “None”.</p>
<p>CFN Time Condition</p>	<p>Select time condition for Call Forward No Answer. The available time conditions are ‘All’, ‘Office Time’, ‘Out of Office Time’, ‘Holiday’, ‘Out of Holiday’, ‘Out of Office Time or Holiday’, ‘Office Time and Out of Holiday’, ‘Specific Time’, ‘Out of Specific Time’, ‘Out of Specific Time or Holiday’, ‘Specific Time and Out of Holiday’.</p> <p>Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured under Specific Time section. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
<p>Call Forward Busy</p>	<p>Configure the Call Forward Busy target number. Available options for target number are:</p> <ul style="list-style-type: none"> • “None”: Call forward deactivated. • “Extension”: Select an extension from dropdown list as CFB target. • “Custom Number”: Enter a customer number as target. For example: *97. • “Voicemail”: Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension.

	<ul style="list-style-type: none"> • “Ring Group”: Select a ring group from dropdown list as CFB target. • “Queues”: Select a queue from dropdown list as CFB target. • “Voicemail Group”: Select a voicemail group from dropdown list as CFB target. <p>The default setting is “None”.</p>
CFB Time Condition	<p>Select time condition for Call Forward Busy. The available time conditions ‘All’, ‘Office Time’, ‘Out of Office Time’, ‘Holiday’, ‘Out of Holiday’, ‘Out of Office Time or Holiday’, ‘Office Time and Out of Holiday’, ‘Specific Time’, ‘Out of Specific Time’, ‘Out of Specific Time or Holiday’, ‘Specific Time and Out of Holiday’.</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured under Specific Time section. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Do Not Disturb	<p>If Do Not Disturb is enabled, all incoming calls will be dropped. All call forward settings will be ignored.</p>
DND Time Condition	<p>Select time condition for Do Not Disturb. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured under Specific Time section. Scroll down the add Time Condition for specific time. <p>Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.</p>

DND Whitelist	<p>If DND is enabled, calls from the whitelisted numbers will not be rejected. Multiple numbers are supported and must be separated by new lines. Pattern matching is supported.</p> <ul style="list-style-type: none"> • Z match any digit from 1-9. • N match any digit from 2-9. • X match any digit from 0-9.
FWD Whitelist	<p>Calls from users in the forward whitelist will not be forwarded. Pattern matching is supported.</p> <ul style="list-style-type: none"> • Z match any digit from 1-9, • N match any digit from 2-9, • X match any digit from 0-9.
CC Settings	
Enable CC	<p>If enabled, FCM630A will automatically alert this extension when a called party is available, given that a previous call to that party failed for some reason. By default, it is disabled.</p>
CC Mode	<p>Two modes for Call Completion are supported:</p> <ul style="list-style-type: none"> • Normal: This extension is used as ordinary extension. • For Trunk: This extension is registered from a PBX. <p>The default setting is "Normal".</p>
CC Max Agents	<p>Configure the maximum number of CCSS agents which may be allocated for this channel. In other words, this number serves as the maximum number of CC requests this channel can make.</p> <p>The minimum value is 1.</p>

CC Max Monitors	<p>Configure the maximum number of monitor structures which may be created for this device. In other words, this number tells how many callers may request CC services for a specific device at one time.</p> <p>The minimum value is 1.</p>
Ring Simultaneously	
Ring Simultaneously	<p>Enable this option to have an external number ring simultaneously along with the extension. If a register trunk is used for outbound, the register number will be used to be displayed for the external number as caller ID number.</p>
External Number	<p>Set the external number to be rang simultaneously. '-' is the connection character which will be ignored.</p> <p>This field accepts only letters, numbers, and special characters + = * #.</p>
Time Condition for Ring Simultaneously	<p>Ring the external number simultaneously along with the extension on the basis of this time condition.</p>
Use callee DOD on FWD or RS	<p>Use the DOD number when calls are being diverted/forwarded to external destinations or when ring simultaneous is configured.</p>
Monitor privilege control	
Allowed to call-barging	<p>Add members from "Available Extensions" to "Selected Extensions" so that the selected extensions can spy on the used extension using feature code.</p>
Seamless transfer privilege control	
Allowed to seamless transfer	<p>Any extensions on the FCM can perform seamless transfer. When using Pickup Incall feature, only extensions available on the "Selected Extensions" list can perform seamless transfer to the edited extension.</p>
PMS Remote Wakeup Whitelist	
Select the extensions that	<p>Selected extensions can set a PMS wakeup service for this extension via feature code.</p>

can set wakeup service for other extensions	
Other Settings	
Ring Timeout	<p>Configure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is enabled) or hang up (voicemail is disabled). If not specified, the default ring timeout is 60 seconds on the FCM630A. The valid range is between 5 seconds and 600 seconds.</p> <p>Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.</p>
Auto Record	<p>Enable automatic recording for the calls using this extension. The default setting is disabled. The recordings can be accessed under Web GUI → CDR → Recording Files.</p>
Skip Trunk Auth	<ul style="list-style-type: none"> • If set to “yes”, users can skip entering the password when making outbound calls. • If set to “By Time”, users can skip entering the password when making outbound calls during the selected time condition. • If set to “No”, users will be asked to enter the password when making outbound calls.
Time Condition for Skip Trunk Auth	<p>If ‘Skip Trunk Auth’ is set to ‘By Time’, select a time condition during which users can skip entering password when making outbound calls.</p>
Dial Trunk Password	<p>Configure personal password when making outbound calls via trunk.</p>
Support Hot-Desking Mode	<p>Check to enable Hot-Desking Mode on the extension. Hot-Desking allows to use the same endpoint device and login using extension/password combination. This feature is used in scenarios where different users need to use the same endpoint device during different time of a day for instance. If enabled, SIP Password will accept only alphabet characters and digits. Auth ID will be changed to the same as Extension.</p>
Enable LDAP	<p>If enabled, the extension will be added to LDAP Phonebook PBX list.</p>

	Default is enabled.
Use MOH as IVR ringback tone	If enabled, when the call to the extension is made through the IVR, the caller will hear MOH as ringback tone instead of the regular ringback tone.
Music On Hold	Specify which Music On Hold class to suggest to the bridged channel when putting them on hold.
Bind PMS Room	If enabled, the system will create a room whose room number, by default, will equal the extension number in PMS module. Note: If this room already exists, the configuration of the existing room will be overwritten.
Call Duration Limit	Check to enable and set the call limit the duration.
Maximum Call Duration (s)	The maximum call duration (in seconds). The default value 0 means no limit. Max value is 86400 seconds
The Maximum Number of Call Lines	The maximum number of simultaneous calls that the extension can have. 0 indicates no limit.
Enable Auto-Answer Support	If enabled, the extension will support auto-answer when indicated by Call-info/Alert-info headers.
Email Missed Calls	Send a log of missed calls to the extension's email address.
Missed Call Type	If Email Missed Calls enabled, users can select the type of missed calls to be sent via email, the available types are: <ul style="list-style-type: none"> • Default: All missed calls will be sent in email notifications. • Missed Internal Call: Only missed local extension-to-extension calls will be sent in email notifications. • Missed External Call: Only missed calls from trunks will be sent in email notifications.
Call Waiting	Allows calls to the extension even when it is already in a call. This only works if the caller is directly dialing the extension. If disabled, the CC service will take effect only for unanswered and timeout calls.

Table 38: SIP Extension Configuration Parameters→Specific Time

Specific Time	
Time Condition	Click to add Time Condition to configure specific time for this extension.

Table 39: Table 34: SIP Extension Configuration Parameters→Follow Me

Follow Me	
Enable	Configure to enable or disable Follow Me for this user.
Skip Trunk Auth	If the outbound calls need to check the password, we should enable this option or enable the option "Skip Trunk Auth" of the Extension. Otherwise this Follow Me cannot call out.
Music On Hold Class	Configure the Music On Hold class that the caller would hear while tracking the user.
Enable Destination	Configure to enable destination.
Default Destination	The call will be routed to this destination if no one in the Follow Me answers the call.
Confirm When Answering	If enabled, call will need to be confirmed after answering.
Use Callee DOD for Follow Me	Use the callee DOD number as CID if configured Follow Me numbers are external numbers.
New Follow Me Number	Add a new Follow Me number which could be a "Local Extension" or an "External Number". The selected dial plan should have permissions to dial the defined external number.
Dialing Order	This is the order in which the Follow Me destinations will be dialed to reach the user.

Create New IAX Extension

The FCM630A supports Inter-Asterisk eXchange (IAX) protocol. IAX is used sessions between servers and terminal devices. IAX is like SIP but also has its own characteristic. For more information, please refer to RFC 5465.

To manually create new IAX user, go to Web GUI→Extension/Trunk→Extensions. Click on "Add" and a new dialog window will show for users which need to make sure first to select the extension type to be IAX Extension before proceeding to fill in the extension information. The configuration parameters are as follows.

Table 40: IAX Extension Configuration Parameters→Basic Settings

General	
Extension	The extension number associated with the user.
CallerID Number	Configure the CallerID Number that would be applied for outbound calls from this user. Note: The ability to manipulate your outbound Caller ID may be limited by your VoIP provider.
Privilege	Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's privilege to make outbound calls using this rule.
SIP/IAX Password	Configure the password for the user. A random secure password will be automatically generated. It is recommended to use this password for security purpose.
Voicemail	Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail". <ul style="list-style-type: none"> • Disable Voicemail: Disable Voicemail. • Enable Local Voicemail: Enable voicemail for the user.
Voicemail Password	Configure voicemail password (digits only) for the user to access the voicemail box. A random numeric password is automatically generated. It is recommended to use the random generated password for security purpose.

Skip Voicemail Password Verification	When user dials voicemail code, the password verification IVR is skipped. If enabled, this would allow one-button voicemail access. By default, this option is disabled.
Send Voicemail Email Notification	Configures whether or not to send emails to the extension's email address to notify of new voicemail.
Attach Voicemail to Email	Configures whether or not to attach voicemail audio file to the voicemail notification emails.
Keep Voicemail after Emailing	Only applies if extension-level or global Send Voicemail to Email is enabled.
Disable This Extension	If selected, this extension will be disabled on the FCM630A. Note: The disabled extension still exists on the PBX but cannot be used on the end device.

User Settings

First Name	Configure the first name of the user. The first name can contain characters, letters, digits and _.
Last Name	Configure the last name of the user. The last name can contain characters, letters, digits and _.
Email Address	Fill in the Email address for the user. Voicemail will be sent to this Email address.
User Password	Configure the password for user portal access. A random numeric password is automatically generated. It is recommended to use the randomly generated password for security purpose.
Language	Select the voice prompt language to be used for this extension. The default setting is "Default" which is the selected voice prompt language under Web GUI→ PBX Settings → Voice Prompt → Language Settings . The dropdown list shows all the current available voice prompt languages on the FCM630A. To add more languages in the list, please download voice prompt package by selecting "Check Prompt List" under Web GUI→ PBX Settings → Voice Prompt → Language Settings .

Mobile Phone Number	Configure the Mobile number of the user.
----------------------------	--

Table 41: IAX Extension Configuration Parameters→Media

IAX Settings	
Max Number of Calls	Configure the maximum number of calls allowed for each remote IP address.
Require Call Token	Configure to enable/disable requiring call token. If set to "Auto", it might lock out users who depend on backward compatibility when peer authentication credentials are shared between physical endpoints. The default setting is "Yes".
SRTP	Enable SRTP for the call. The default setting is disabled.
ACL Policy	<p>Access Control List manages the IP addresses that can register to this extension.</p> <ul style="list-style-type: none"> • Allow All: Any IP address can register to this extension. • Local Network: Only IP addresses in the configured network segments can register to this extension.
Codec Preference	Select codec for the extension. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p, RTX and VP8.

Table 42: IAX Extension Configuration Parameters→Features

Call Transfer	
Call Forward Unconditional	Configure the Call Forward Unconditional target number. If not configured, the Call Forward Unconditional feature is deactivated. The default setting is deactivated.
CFU Time Condition	Select time condition for Call Forward Unconditional. CFU takes effect only during the selected time condition. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific".

	<p>Note:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward No Answer	Configure the Call Forward No Answer target number. If not configured, the Call Forward No Answer feature is deactivated. The default setting is deactivated.
CFN Time Condition	<p>Select time condition for Call Forward No Answer. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p>Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward Busy	Configure the Call Forward Busy target number. If not configured, the Call Forward Busy feature is deactivated. The default setting is deactivated.
CFB Time Condition	<p>Select time condition for Call Forward Busy. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p>Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration

	<p>dialog. Scroll down the add Time Condition for specific time.</p> <p>Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.</p>
Do Not Disturb	If Do Not Disturb is enabled, all incoming calls will be dropped. All call forward settings will be ignored.
DND Time Condition	The time condition of DND. The DND will take effect while the time condition is satisfied.
DND Whitelist	<p>If DND is enabled, calls from the whitelisted numbers will not be rejected. Multiple numbers are supported and must be separated by new lines. Pattern matching is supported.</p> <ul style="list-style-type: none"> • Z match any digit from 1-9. • N match any digit from 2-9. • X match any digit from 0-9.
FWD Whitelist	<p>Calls from users in the forward whitelist will not be forwarded.</p> <p>Pattern matching is supported.</p> <ul style="list-style-type: none"> • Z match any digit from 1-9. • N match any digit from 2-9. • X match any digit from 0-9.
Ring Simultaneously	
Ring Simultaneously	Enable this option to have an external number ring simultaneously along with the extension. If a register trunk is used for outbound, the register number will be used to be displayed for the external number as caller ID number.
External Number	Set the external number to be rang simultaneously. '-' is the connection character which will be ignored.
Time Condition for Ring	Ring the external number simultaneously along with the extension on the basis of this time condition.

Simultaneously	
Use callee DOD on FWD or RS	Use the callee's DOD number as CallerID on Outgoing Forwarding or Ring Simultaneously calls.
Monitor privilege control	
Allow call-barging	Members of the list can spy on this extension via feature codes.
Seamless transfer privilege control	
Allowed to seamless transfer	Members of the list can seamlessly transfer via feature code.
Other Settings	
Ring Timeout	<p>Configure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is enabled) or hang up (voicemail is disabled). If not specified, the default ring timeout is 60 seconds on the FCM630A, which can be configured in the global ring timeout setting under Web GUI→PBX Settings→Voice Prompt→Custom Prompt: General Preference. The valid range is between 5 seconds and 600 seconds.</p> <p>Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.</p>
Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recording files can be accessed under Web GUI→ CDR → Recording Files .
Skip Trunk Auth	<ul style="list-style-type: none"> • If set to “Yes”, users can skip entering the password when making outbound calls. • If set to “By Time”, users can skip entering the password when making outbound calls during the selected time condition. • If set to “No”, users will be asked to enter the password when making outbound calls.
Time Condition for	If “Skip Trunk Auth” is set to “By Time”, select a time condition during which users can

Skip Trunk Auth	skip entering password when making outbound calls.
Dial Trunk Password	Configure personal password when making outbound calls via trunk.
Enable LDAP	If enabled, the extension will be added to LDAP Phonebook PBX lists.
Music On Hold	Configure the Music On Hold class to suggest to the bridged channel when putting them on hold.
Use MOH as IVR ringback tone	If enabled, when the call to the extension is made through the IVR, the caller will hear MOH as ringback tone instead of the regular ringback tone.
Call Duration Limit	Check to enable and set the call limit the duration.
Maximum Call Duration (s)	The maximum call duration (in seconds). The default value 0 means no limit. Max value is 86400 seconds
Email MissedCalls	Send a log of missed calls to the extension's email address.
Missed Call Type	<p>If Email Missed Calls enabled, users can select the type of missed calls to be sent via email, the available types are:</p> <ul style="list-style-type: none"> • Default: All missed calls will be sent in email notifications. • Missed Internal Call: Only missed local extension-to-extension calls will be sent in email notifications. • Missed External Call: Only missed calls from trunks will be sent in email notifications.

Table 43: IAX Extension Configuration Parameters→Specific Time

Specific Time	
Time Condition	Click to add Time Condition to configure specific time for this extension.

Table 44: IAX Extension Configuration Parameters→Follow Me

Follow Me	
Enable	Configure to enable or disable Follow Me for this user.
Skip Trunk Auth	If the outbound calls need to check the password, we should enable this option or enable the option "Skip Trunk Auth" of the Extension. Otherwise this Follow Me cannot call out.
Music On Hold Class	Configure the Music On Hold class that the caller would hear while tracking the user.
Enable Destination	Configure to enable destination.
Default Destination	The call will be routed to this destination if no one in the Follow Me answers the call.
Confirm When Answering	If enabled, call will need to be confirmed after answering.
Use Callee DOD for Follow Me	Use the callee DOD number as CID if configured Follow Me numbers are external numbers.
New Follow Me Number	Add a new Follow Me number which could be a "Local Extension" or an "External Number". The selected dial plan should have permissions to dial the defined external number.
Dialing Order	This is the order in which the Follow Me destinations will be dialed to reach the user.

Batch Add Extensions

Batch Add SIP Extensions

To add multiple SIP extensions, BATCH add can be used to create standardized SIP extension accounts. However, unique extension username cannot be set using BATCH add.

Under Web GUI → Extension/Trunk → Extensions, click on "Add" and select extension type as SIP extension, and "Select Add Method" as Batch.

Table 45: Batch Add SIP Extension Parameters

General	
Create Number	Specify the number of extensions to be added. The default setting is 5.
Extension Incrementation	Select how much to increment successive extensions. For example, if the value is 2, the extensions will be 1000,1002,1004, Note: Up to 3 characters.
Extension	Configure the starting extension number of the batch of extensions to be added.
Permission	Assign permission level to the user. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". Note: Users need to have the same level as or higher level than an outbound rule's privilege to make outbound calls from this rule.
Voicemail	Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail". <ul style="list-style-type: none"> • Disable Voicemail: Disable Voicemail. • Enable Local Voicemail: Enable voicemail for the user. • Enable Remote Voicemail: Forward the notify message from remote voicemail system for the user, and the local voicemail will be disabled. Note: Remote voicemail feature is used only for Infomatec (Brazil).
SIP/IAX Password	Configure the SIP/IAX password for the users. Three options are available to create password for the batch of extensions. <ul style="list-style-type: none"> • User Random Password. A random secure password will be automatically generated. It is recommended to use this password for security purpose. • Use Extension as Password. • Enter a password to be used on all the extensions in the batch.
Voicemail	Configure Voicemail password (digits only) for the users.

Password	<ul style="list-style-type: none"> • User Random Password. A random password in digits will be automatically generated. It is recommended to use this password for security purpose. • Use Extension as Password. Enter a password to be used on all the extensions in the batch.
Send Voicemail to Email	Send voicemail messages to the configured email address. If set to "Default", the global setting will be used. Global settings can be found in Voicemail->Voicemail Email Settings.
Keep Voicemail after Emailing	Only applies if extension-level or global Send Voicemail to Email is enabled.
CallerID Number	<p>Configure CallerID Number when adding Batch Extensions.</p> <ul style="list-style-type: none"> • Use Extension as Number Users can choose to use the extension number as CallerID • Use as Number Users can choose to set a specific number instead of using the extension number.
Skip Voicemail Password Verification	When user dials voicemail code, the password verification IVR is skipped. If enabled, this would allow one-button voicemail access. By default, this option is disabled.
Enable Keep-alive	If enabled, the PBX will regularly send SIP OPTIONS to check if host device is online.
Keep-alive Frequency	Configure the keep-alive interval (in seconds) to check if the host is up.
Disable This Extension	Check this box to disable this extension.
Enable SCA	If enabled, (1) Call Forward, Call Waiting and Do Not Disturb settings will not work, (2) Concurrent Registrations can be set only to 1, and (3) Private numbers can be added in Call Features->SCA page.
Emergency Calls	CallerID number that will be used when calling out and receiving direct callbacks.

CID	
Language	Select voice prompt language for this extension. If set to "Default", the global setting for voice prompt language will be used.
Media	
NAT	<p>Use NAT when the PBX is on a public IP communicating with devices hidden behind NAT (e.g., broadband router). If there is one-way audio issue, usually it is related to NAT configuration or Firewall's support of SIP and RTP ports.</p> <p>The default setting is enabled.</p>
Enable Direct Media	By default, the PBX will route the media streams from SIP endpoints through itself. If enabled, the PBX will attempt to negotiate with the endpoints to route the media stream directly. It is not always possible for the PBX to negotiate endpoint-to-endpoint media routing. The default setting is "No".
DTMF Mode	Select DTMF mode for the user to send DTMF. The default setting is "RFC4733". If "Info" is selected, SIP INFO message will be used. If "Inband" is selected, a-law or u-law are required. When "Auto" is selected, RFC4733 will be used if offered, otherwise "Inband" will be used.
Alert-info	When present in an INVITE request, the Alert-info header field specifies an alternative ring tone to the UAS.
SRTP	Enable/disable SRTP for RTP stream encryption.
Packet Loss Retransmission	<p>Configure to enable Packet Loss Retransmission.</p> <ul style="list-style-type: none"> • NACK • NACK+RTX(SSRC-GROUP)

	<ul style="list-style-type: none"> • OFF
Video FEC	Check to enable Forward Error Correction (FEC) for Video.
FECC	Configure to enable FECC
Audio FEC	Check to enable Forward Error Correction (FEC) for Audio.
ACL Policy	<p>Access Control List manages the IP addresses that can register to this extension.</p> <ul style="list-style-type: none"> • Allow All: Any IP address can register to this extension. • Local Network: Only IP addresses in the configured network segments can register to this extension. Press “Add Local Network Address” to add more IP segments.
Jitter Buffer	<p>Select jitter buffer method.</p> <ul style="list-style-type: none"> • Disable: Jitter buffer will not be used. • Fixed: Jitter buffer with a fixed size (equal to the value of "jitter buffer size") • Adaptive: Jitter buffer with an adaptive size (no more than the value of "max jitter buffer"). • NetEQ: Dynamic jitter buffer via NetEQ.
Codec Preference	Configure the codecs to be used.
Call Transfer	
Presence Status	Select which presence status to set for the extension and configure call forward conditions for each status. Six possible options are possible: “ Available ”, “ Away ”, “ Chat ”, “ Custom ”, “ DND ” and “ Unavailable ”. More details at [PRESENCE].
Call Forward Unconditional	<p>Enable and configure the Call Forward Unconditional target number. Available options for target number are:</p> <ul style="list-style-type: none"> • “None”: Call forward deactivated. • “Extension”: Select an extension from dropdown list as CFU target. • “Custom Number”: Enter a customer number as target. For example: *97.

	<ul style="list-style-type: none"> • “Voicemail”: Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. • “Ring Group”: Select a ring group from dropdown list as CFU target. • “Queues”: Select a queue from dropdown list as CFU target. • “Voicemail Group”: Select a voicemail group from dropdown list as CFU target. <p>The default setting is “None”.</p>
<p>CFU Time Condition</p>	<p>Select time condition for Call Forward Unconditional. CFU takes effect only during the selected time condition. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p>Note:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
<p>Call Forward No Answer</p>	<p>Configure the Call Forward No Answer target number. Available options for target number are:</p> <ul style="list-style-type: none"> • “None”: Call forward deactivated. • “Extension”: Select an extension from dropdown list as CFN target. • “Custom Number”: Enter a customer number as target. For example: *97. • “Voicemail”: Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. • “Ring Group”: Select a ring group from dropdown list as CFN target. • “Queues”: Select a queue from dropdown list as CFN target. • “Voicemail Group”: Select a voicemail group from dropdown list as CFN target.

<p>CFN Time Condition</p>	<p>The default setting is "None".</p> <p>Select time condition for Call Forward No Answer. The available time conditions are "Office Time", "Out of Office Time", "Holiday", "Out of Holiday", "Out of Office Time or Holiday" and "Specific".</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> • "Specific" has higher priority to "Office Times" if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
<p>Call Forward Busy</p>	<p>Configure the Call Forward Busy target number. Available options for target number are:</p> <ul style="list-style-type: none"> • "None": Call forward deactivated. • "Extension": Select an extension from dropdown list as CFB target. • "Custom Number": Enter a customer number as target. For example: *97. • "Voicemail": Select an extension from dropdown list. Incoming calls will be forwarded to voicemail of selected extension. • "Ring Group": Select a ring group from dropdown list as CFB target. • "Queues": Select a queue from dropdown list as CFB target. • "Voicemail Group": Select a voicemail group from dropdown list as CFB target. <p>The default setting is "None".</p>

<p>CFB Time Condition</p>	<p>Select time condition for Call Forward Busy. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
<p>Do Not Disturb</p>	<p style="text-align: center;">If Do Not Disturb is enabled, all incoming calls will be dropped.</p> <p style="text-align: center;">All call forward settings will be ignored.</p>
<p>DND Time Condition</p>	<p>Select time condition for Do Not Disturb. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. <p style="text-align: center;">Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.</p>
<p>DND Whitelist</p>	<p>If DND is enabled, calls from the whitelisted numbers will not be rejected. Multiple numbers are supported and must be separated by new lines. Pattern matching is supported.</p> <p>Z match any digit from 1-9, N match any digit from 2-9, X match any digit from 0-9.</p>
<p>FWD Whitelist</p>	<p>Calls from users in the forward whitelist will not be forwarded. Pattern matching is supported.</p>

Z match any digit from 1-9, N match any digit from 2-9, X match any digit from 0-9.

CC Settings

Enable CC	If enabled, FCM630A will automatically alert this extension when a called party is available, given that a previous call to that party failed for some reason. By default, it is disabled.
CC Mode	Two modes for Call Completion are supported: <ul style="list-style-type: none">• Normal: This extension is used as ordinary extension.• For Trunk: This extension is registered from a PBX. The default setting is "Normal".
CC Max Agents	Configure the maximum number of CCSS agents which may be allocated for this channel. In other words, this number serves as the maximum number of CC requests this channel can make. The minimum value is 1.
CC Max Monitors	Configure the maximum number of monitor structures which may be created for this device. In other words, this number tells how many callers may request CC services for a specific device at one time. The minimum value is 1.

Ring Simultaneously

Ring Simultaneously	Enable this option to have an external number ring simultaneously along with the extension. If a register trunk is used for outbound, the register number will be used to be displayed for the external number as caller ID number.
External Number	Set the external number to be rang simultaneously. '-' is the connection character which will be ignored. This field accepts only letters, numbers, and special characters + = * #.
Time Condition for Ring Simultaneously	Ring the external number simultaneously along with the extension on the basis of this time condition.
Use callee DOD on FWD or RS	Use the DOD number when calls are being diverted/forwarded to external destinations or when ring simultaneous is configured.

Monitor privilege control	
Allowed to call-barging	Add members from “Available Extensions” to “Selected Extensions” so that the selected extensions can spy on the used extension using feature code.
Seamless transfer privilege control	
Allowed to seamless transfer	Any extensions on the FCM can perform seamless transfer. When using Pickup Incall feature, only extensions available on the “Selected Extensions” list can perform seamless transfer to the edited extension.
Other Settings	
Ring Timeout	<p>Configure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is enabled) or hang up (voicemail is disabled). If not specified, the default ring timeout is 60 seconds on the FCM630A, which can be configured in the global ring timeout setting under Web GUI→PBX Settings→Voice Prompt→Custom Prompt: General Preference. The valid range is between 3 seconds and 600 seconds.</p> <p>Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.</p>
Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recordings can be accessed under Web GUI→CDR→Recording Files.
Skip Trunk Auth	<ul style="list-style-type: none"> • If set to “yes”, users can skip entering the password when making outbound calls. • If set to “By Time”, users can skip entering the password when making outbound calls during the selected time condition. • If set to “No”, users will be asked to enter the password when making outbound calls.
Time Condition for Skip Trunk Auth	If ‘Skip Trunk Auth’ is set to ‘By Time’, select a time condition during which users can skip entering password when making outbound calls.
Dial Trunk Password	Configure personal password when making outbound calls via trunk.
Enable LDAP	If enabled, the extension will be added to LDAP Phonebook PBX list.

Bind PMS Room	If enabled, the system will create a room whose room number, by default, will equal the extension number in PMS module. Note: If this room already exists, the configuration of the existing room will be overwritten.
Music On Hold	Specify which Music On Hold class to suggest to the bridged channel when putting them on hold.
Call Duration Limit	The maximum duration of call-blocking.
Maximum Call Duration	The maximum call duration (in seconds). The default value 0 means no limit.
Call Waiting	If disabled, FCM will not invite the extension when it is already in a call and will do the same work as the user is busy. Note: the option only works when the caller dials the extension directly.

Batch Add IAX Extensions

Under Web GUI→Extension/Trunk→Extensions, click on “Add”, then select extension type as IAX Extension and the add method to be Batch.

Table 46: Batch Add IAX Extension Parameters

General	
Create Number	Specify the number of extensions to be added. The default setting is 5.
Extension Incrementation	Select how much to increment successive extensions. For example, if the value is 2, the extensions will be 1000,1002,1004,.....
Extension	The extension number associated with this particular user/phone.
Permission	Assign permission level to the user. The available permissions are “Internal”, “Local”, “National” and “International” from the lowest level to the highest level. The default setting is “Internal”. Note: Users need to have the same level as or higher level than an outbound rule’s privilege in order to make outbound calls from this rule.
CallerID Number	Configure the Caller ID number displayed when dialing calls from this user. Note:

	The Caller ID usage might be limited by your VoIP provider. In Batch Add Method, "e" means to use the extension as the number.
Voicemail	<p>Configure Voicemail. There are three valid options and the default option is "Enable Local Voicemail".</p> <ul style="list-style-type: none"> • Disable Voicemail: Disable Voicemail. • Enable Local Voicemail: Enable voicemail for the user.
SIP/IAX Password	<p>Configure the SIP/IAX password for the users. Three options are available to create password for the batch of extensions.</p> <ul style="list-style-type: none"> • User Random Password. A random secure password will be automatically generated. It is recommended to use this password for security purpose. • Use Extension as Password. • Enter a password to be used on all the extensions in the batch.
Voicemail Password	<p>Configure Voicemail password (digits only) for the users.</p> <ul style="list-style-type: none"> • User Random Password. A random password in digits will be automatically generated. It is recommended to use this password for security purpose. • Use Extension as Password. • Enter a password to be used on all the extensions in the batch.
Send Voicemail to Email	Send voicemail messages to the configured email address. If set to "Default", the global setting will be used. Global settings can be found in Voicemail->Voicemail Email Settings.
Keep Voicemail after Emailing	Only applies if extension-level or global Send Voicemail to Email is enabled.
Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recording files can be accessed under Web GUI→ CDR → Recording Files .
Skip Voicemail	When user dials voicemail code, the password verification IVR is skipped. If enabled,

Password Verification	this would allow one-button voicemail access. By default, this option is disabled.
Disable This Extension	Check this box to disable this extension.
Language	Select voice prompt language for this extension. If set to "Default", the global setting for voice prompt language will be used.
IAX Settings	
Max Number of Calls	Configure the maximum number of calls allowed for each remote IP address.
Require Call Token	Configure to enable/disable requiring call token. If set to "Auto", it might lock out users who depend on backward compatibility when peer authentication credentials are shared between physical endpoints. The default setting is "Yes".
SRTP	Enable/disable SRTP for RTP stream encryption.
ACL Policy	Access Control List manages the IP addresses that can register to this extension. <ul style="list-style-type: none"> • Allow All: Any IP address can register to this extension. • Local Network: Only IP addresses in the configured network segments can register to this extension.
Codec Preference	Configure the codecs to be used.

Call Transfer	
Call Forward Unconditional	Enable and configure the Call Forward Unconditional target number.
CFU Time Condition	Select time condition for Call Forward Unconditional. CFU takes effect only during the selected time condition. The available time conditions are "Office Time", "Out of Office

	<p>Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p style="text-align: center;">Note:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward No Answer	Configure the Call Forward No Answer target number.
CFN Time Condition	<p>Select time condition for Call Forward No Answer. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. • Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Call Forward Busy	Configure the Call Forward Busy target number.
CFB Time Condition	<p>Select time condition for Call Forward Busy. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> • “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. • Specific time can be configured on the bottom of the extension configuration

	<p>dialog. Scroll down the add Time Condition for specific time.</p> <ul style="list-style-type: none"> Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
Do Not Disturb	<p>If Do Not Disturb is enabled, all incoming calls will be dropped.</p> <p>All call forward settings will be ignored.</p>
DND Time Condition	<p>Select time condition for Do Not Disturb. The available time conditions are “Office Time”, “Out of Office Time”, “Holiday”, “Out of Holiday”, “Out of Office Time or Holiday” and “Specific”.</p> <p style="text-align: center;">Notes:</p> <ul style="list-style-type: none"> “Specific” has higher priority to “Office Times” if there is a conflict in terms of time period. Specific time can be configured on the bottom of the extension configuration dialog. Scroll down the add Time Condition for specific time. Office Time and Holiday could be configured on page System Settings→Time Settings→Office Time/Holiday page.
DND Whitelist	<p>If DND is enabled, calls from the whitelisted numbers will not be rejected. Multiple numbers are supported and must be separated by new lines. Pattern matching is supported.</p> <ul style="list-style-type: none"> Z match any digit from 1-9, N match any digit from 2-9, X match any digit from 0-9.
FWD Whitelist	<p>Calls from users in the forward whitelist will not be forwarded. Pattern matching is supported.</p> <ul style="list-style-type: none"> Z match any digit from 1-9, N match any digit from 2-9, X match any digit from 0-9.
Ring Simultaneously	

Ring Simultaneously	Enable this option to have an external number ring simultaneously along with the extension. If a register trunk is used for outbound, the register number will be used to be displayed for the external number as caller ID number.
External Number	Set the external number to be rang simultaneously. '-' is the connection character which will be ignored. This field accepts only letters, numbers, and special characters + = * #.
Time Condition for Ring Simultaneously	Ring the external number simultaneously along with the extension on the basis of this time condition.
Use callee DOD on FWD or RS	Use the DOD number when calls are being diverted/forwarded to external destinations or when ring simultaneous is configured.
Monitor privilege control	
Allowed to call-barging	Add members from "Available Extensions" to "Selected Extensions" so that the selected extensions can spy on the used extension using feature code.
Seamless transfer privilege control	
Allowed to seamless transfer	Any extensions on the FCM can perform seamless transfer. When using Pickup Incall feature, only extensions available on the "Selected Extensions" list can perform seamless transfer to the edited extension.
Other Settings	
Ring Timeout	Configure the number of seconds to ring the user before the call is forwarded to voicemail (voicemail is enabled) or hang up (voicemail is disabled). If not specified, the default ring timeout is 60 seconds on the FCM630A, which can be configured in the global ring timeout setting under Web GUI→PBX Settings→Voice Prompt→Custom Prompt: General Preference. The valid range is between 5 seconds and 600 seconds. Note: If the end point also has a ring timeout configured, the actual ring timeout used is the shortest time set by either device.

Auto Record	Enable automatic recording for the calls using this extension. The default setting is disabled. The recordings can be accessed under Web GUI→ CDR → Recording Files .
Skip Trunk Auth	<ul style="list-style-type: none"> • If set to “yes”, users can skip entering the password when making outbound calls. • If set to “By Time”, users can skip entering the password when making outbound calls during the selected time condition. • If set to “No”, users will be asked to enter the password when making outbound calls.
Time Condition for Skip Trunk Auth	If ‘Skip Trunk Auth’ is set to ‘By Time’, select a time condition during which users can skip entering password when making outbound calls.
Dial Trunk Password	Configure personal password when making outbound calls via trunk.
Enable LDAP	If enabled, the extension will be added to LDAP Phonebook PBX list.
Music On Hold	Specify which Music On Hold class to suggest to the bridged channel when putting them on hold.
Call Duration Limit	Check to enable and set the call limit the duration.
Maximum Call Duration (s)	The maximum call duration (in seconds). The default value 0 means no limit. Max value is 86400 seconds

Batch Extension Resetting Functionality

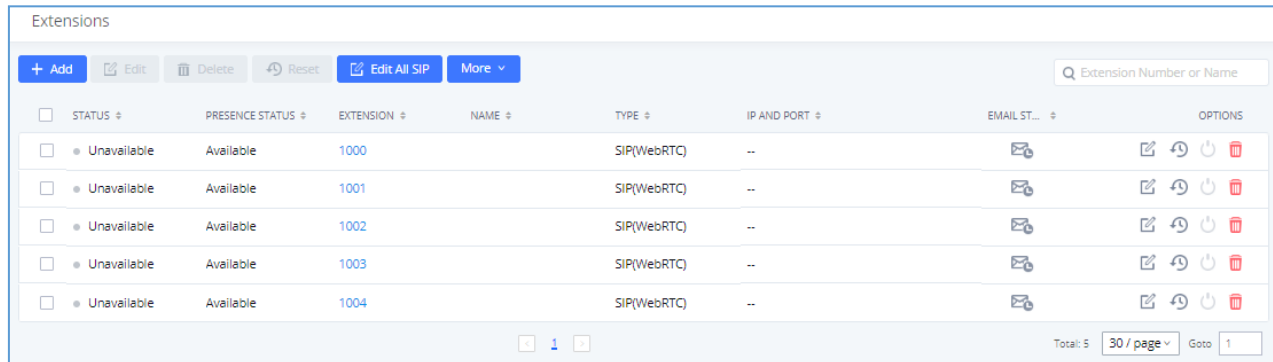

Users can select multiple extensions and reset their settings to default by pressing the reset button  and confirm the reset functionality. Once done, all settings in Basic Settings page will be restored to default values with the exception of Concurrent Registrations. User voicemail password will be reset to Random Password. User voicemail prompts and recordings will be deleted. User Management settings will also be restored to default with the exception of usernames and custom privileges

Search and Edit Extension

All the FCM630A extensions are listed under Web GUI→Extension/Trunk→Extensions, with status, Extension, CallerID Name, Technology (SIP and IAX), IP and Port. Each extension has a checkbox for

users to "Edit" or "Delete". Also, options "Edit" , "Reboot"  and "Delete"  are available per extension. User can search an extension by specifying the extension number to find an extension quickly.

STATUS	PRESENCE STATUS	EXTENSION	NAME	TYPE	IP AND PORT	EMAIL ST...	OPTIONS
Unavailable	Available	1000		SIP(WebRTC)	--		
Unavailable	Available	1001		SIP(WebRTC)	--		
Unavailable	Available	1002		SIP(WebRTC)	--		
Unavailable	Available	1003		SIP(WebRTC)	--		
Unavailable	Available	1004		SIP(WebRTC)	--		

Figure 73: Manage Extensions

• Status

Users can see the following icon for each extension to indicate the SIP status.

- **Green:** Idle
- **Blue:** Ringing
- **Yellow:** In Use
- **Grey:** Unavailable (the extension is not registered or disabled on the PBX)

• Edit single extension

Click on  to start editing the extension parameters.

• Reset single extension

Click on  to reset the extension parameters to default (except concurrent registration).

Other settings will be restored to default in **Maintenance**→**User Management**→**User Information** except username and permissions and delete the user voicemail prompt and voice messages.

• Reboot the user

Click on  to send NOTIFY reboot event to the device which has an FCM630A extension already registered. To successfully reboot the user, "Zero Config" needs to be enabled on the FCM630A Web GUI→**Value-added Features**→**Zero Config**→**Zero Config Settings**.

- **Delete single extension**

Click on  to delete the extension. Or select the checkbox of the extension and then click on "Delete Selected Extensions".

- **Modify selected extensions**

Select the checkbox for the extension(s). Then click on "Edit" to edit the extensions in a batch.

- **Delete selected extensions**

Select the checkbox for the extension(s). Then click on "Delete " to delete the extension(s).

Export Extensions

The extensions configured on the FCM630A can be exported to csv format file with selected technology "SIP" or "IAX". Click on "Export Extensions" button and select technology in the prompt below.

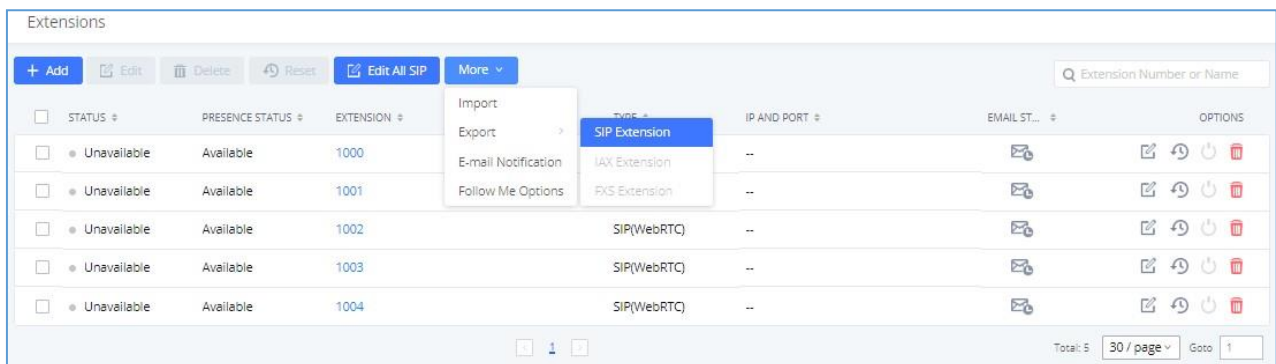

Figure 74: Export Extensions

The exported csv file can serve as a template for users to fill in desired extension information to be imported to the FCM630A.

Import Extensions

The capability to import extensions to the FCM630A provides users flexibility to batch add extensions with similar or different configuration quickly into the PBX system.

1. Export extension csv file from the FCM630A by clicking on "Export Extensions" button.
2. Fill up the extension information you would like in the exported csv template.
3. Click on "Import Extensions" button. The following dialog will be prompted.

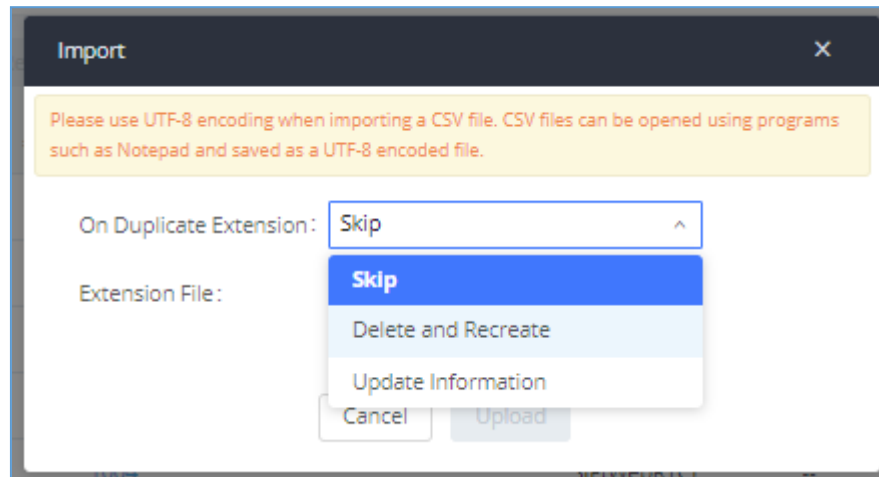

Figure 75: Import Extensions

4. Select the option in "On Duplicate Extension" to define how the duplicate extension(s) in the imported csv file should be treated by the PBX.
 - **Skip:** Duplicate extensions in the csv file will be skipped. The PBX will keep the current extension information as previously configured without change.
 - **Delete and Recreate:** The current extension previously configured will be deleted and the duplicate extension in the csv file will be loaded to the PBX.
 - **Update Information:** The current extension previously configured in the PBX will be kept. However, if the duplicate extension in the csv file has different configuration for any options, it will override the configuration for those options in the extension.
5. Click on "Choose file to upload" to select csv file from local directory in the PC.
6. Click on "Apply Changes" to apply the imported file on the FCM630A.

Example of file to import:

The CSV file should contain all the above fields, if one of them is missing or empty, the FCM630A will display the following error message for missing fields.

Figure 77: Import Error

Extension Details

Users can click on an extension number in the *Extensions* list page and quickly view information about it such as:

- **Extension:** Shows the Extension number.
- **Status:** Shows the status of the extension.
- **Presence status:** Indicates the Presence Status of this extension.
- **Terminal Type:** Shows the Type of the terminal using this extension (SIP, IAX...etc.).
- **Caller ID Name:** Reveals the Caller ID Name configured on the extension.
- **Messages:** Shows the messages stats.
- **IP and Port:** The IP address and the ports of the device using the extension.
- **Email status:** Show the Email status (sent, to be sent...etc.).
- **Ring Group:** Indicates the ring groups that this extension belongs to.
- **Call Queue:** Indicates the Cal Queues that this extension belongs to.
- **Call Queue (Dynamic):** Indicates the Call Queues that this extension belongs to as a dynamic agent.

E-mail Notification

Once the extensions are created with Email addresses, the PBX administrator can click on button “E-mail Notification” to send the account registration and configuration information to the user. Please make sure Emailsetting under Web GUI→System Settings→Email Settings is properly configured and tested on the FCM630A before using “E-mail Notification”.

When click on ”More” > “E-mail Notification” button, the following message will be prompted in the web page. Click on OK to confirm sending the account information to all users’ Email addresses.

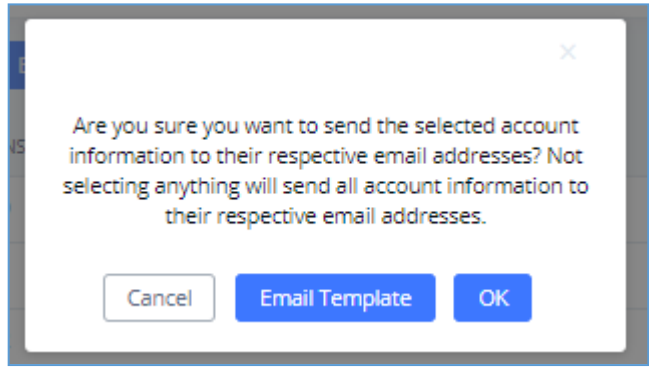

Figure 79: E-mail Notification - Prompt Information

The user will receive Email including account registration information as below.

General Settings(Register an account on the phone or device)

Server Address	192.168.99.117:5060
Account Name	Jon
SIP User ID	1000
Authenticate ID	1000
Authenticate Password	password

Figure 80: Account Registration Information

Multiple Registrations per Extension

FCM630A supports multiple registrations per extension so that users can use the same extension on devices in different locations.

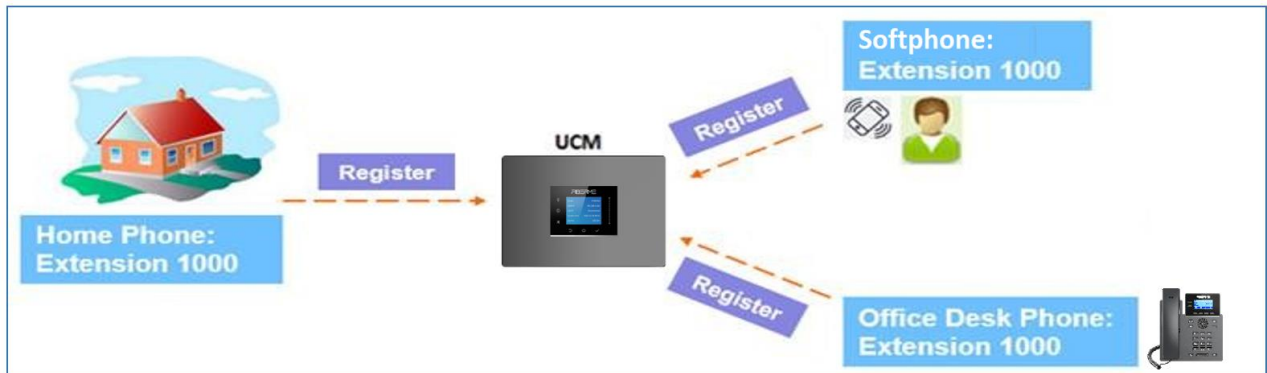

Figure 81: Multiple Registrations per Extension

This feature can be enabled by configuring option “Concurrent GUI→Extension/Trunk→Edit Extension. The default value is set to 1 for security purpose. Maximum is 10.

The screenshot shows the 'Edit Extension: 1000' configuration page. The page has a header with 'Edit Extension: 1000' and navigation tabs: 'Basic Settings', 'Media', 'Features', 'Specific Time', and 'Follow Me'. There are 'Cancel' and 'Save' buttons in the top right corner. The page is divided into two main sections: 'General' and 'User Settings'.

General Settings:

- Extension: 1000
- Permission: Internal
- AuthID: (empty)
- Voicemail Password: (masked)
- CallerID Number: 1000
- SIP/IAX Password: (masked)
- Voicemail: Local Voicemail
- Skip Voicemail Password:
- Verification: (empty)
- Send Voicemail to Email: Default
- Keep Voicemail after Emailing: Default
- Enable Keep-alive:
- Keep-alive Frequency: 60
- Disable This Extension:
- Enable SCA:
- Emergency Calls CID: (empty)

User Settings:

- First Name: (empty)
- Last Name: (empty)
- Email Address: (empty)
- User Password: (masked)
- Language: Default
- Concurrent Registrations: 3
- Mobile Phone Number: (empty)

Figure 82: Extension - Concurrent Registration

EXTENSION GROUPS

The FCM630A extension group feature allows users to assign and categorize extensions in different groups to better manage the configurations on the FCM630A. For example, when configuring "Enable Filter on Source Caller ID", users could select a group instead of each person's extension to assign. This feature simplifies the configuration process and helps manage and categorize the extensions for business environment.

Configure Extension Groups

Extension group can be configured via Web GUI → **Extension/Trunk** → **Extension Groups**.

- Click on  to create a new extension group.
- Click on  to edit the extension group.
- Click on  to delete the extension group.

Select extensions from the list on the left side to the right side.

Create New Extension Group

VOIP TRUNKS

VoIP Trunk Configuration

VoIP trunks can be configured in FCM630A under Web GUI→Extension/Trunk→VoIP Trunks. Once created, the VoIP trunks will be listed with Provider Name, Type, Hostname/IP, Username and Options to edit/detect the trunk.

- Click on "Add SIP Trunk" or "Add IAX Trunk" to add a new VoIP trunk.
- Click on  to configure detailed parameters for the VoIP trunk.
- Click on  to configure Direct Outward Dialing (DOD) for the SIP Trunk.
- Click on  to start LDAP Sync.
- Click on  to delete the VoIP trunk.

For VoIP trunk example, please refer to the document in the following link:

http://download.fiberme.com/docs/FCM630A_SIP_Trunk_Guide.pdf

The VoIP trunk options are listed in the table below.

Table 49: Create New SIP Trunk

Type	Select the VoIP trunk type. <ul style="list-style-type: none">• Peer SIP Trunk• Register SIP Trunk
Provider Name	Configure a unique label (up to 64 character) to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.

Keep Original CID	Keep the CID from the inbound call when dialing out. This setting will override “Keep Trunk CID” option. Please make sure that the peer PBX at the other side supports to match user entry using “username” field from authentication line.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension’s CID when the extension has CID configured. The default setting is “No”.
NAT	Turn on this setting when the PBX is using public IP and communicating with devices behind NAT. If there is one-way audio issue, usually it is related to NAT configuration or SIP/RTP port support on the firewall.
Disable This Trunk	If checked, the trunk will be disabled. Note: If a current SIP trunk is disabled, FCM will send UNREGISTER message (REGISTER message with expires=0) to the SIP provider.
TEL URI	If the trunk has an assigned PSTN telephone number, this field should be set to "User=Phone". Then a "User=Phone" parameter will be attached to the Request-Line and TO header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP request. The default setting is disabled.
Caller ID Number	Configure the Caller ID. This is the number that the trunk will try to use when making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored. Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call: From user (Register Trunk Only) → CID from inbound call (Keep Original CID Enabled) → Trunk Username/CallerID (Keep Trunk CID Enabled) → DOD → Extension CallerID Number → Trunk Username/CallerID (Keep Trunk CID Disabled) → Global Outbound CID.
CallerID Name	Configure the new name of the caller when the extension has no CallerID Name configured.
Need Registration	Select whether the trunk needs to register on the external server or not when "Register SIP Trunk" type is selected. The default setting is No.
Allow outgoing calls	Uncheck to block outgoing calls if registration fails. If "Need Registration" option is

if registration fails	unchecked, this setting will be ignored.
Username	Enter the username to register to the trunk from the provider when "Register SIP Trunk" type is selected.
Password	Enter the password to register to the trunk from the provider when "Register SIP Trunk" is selected.
Auth ID	Enter the Authentication ID for "Register SIP Trunk" type.
Auto Record	Enable automatic recording for the calls using this trunk (for SIP trunk only). The default setting is disabled. The recording files can be accessed under Web GUI→CDR→Recording Files.
Direct Callback	<p>Allows external numbers the option to get directed to the extension that last called them.</p> <p>For Example: User 2002 has dialed external number 061234575 but they were not reachable, once they have received missed call notification on their phone, they would mostly call back the number, if the option "Direct Callback" is enabled then they will be directly bridged to user 2002 regardless of the configured inbound destination.</p>

Table 50: SIP Register Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Transport	<p>Configure the SIP transport protocol to be used in this trunk. The default setting is "UDP".</p> <ul style="list-style-type: none"> • UDP

	<ul style="list-style-type: none"> • TCP • TLS
SIP URI Scheme When Using TLS	When TLS is selected as Transport for register trunk, users can select between SIP and SIPS URI scheme
Keep Original CID	Keep the CID from the inbound call when dialing out. This setting will override "Keep Trunk CID" option. Please make sure that the peer PBX at the other side supports to match user entry using "username" field from authentication line.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
NAT	Turn on this option when the PBX is using public IP and communicating with devices behind NAT. If there is one-way audio issue, usually it is related to NAT configuration or SIP/RTP port configuration on the firewall.
Disable This Trunk	<p>If selected, the trunk will be disabled.</p> <p>Note: If a current SIP trunk is disabled, FCM will send UNREGISTER message (REGISTER message with expires=0) to the SIP provider.</p>
TEL URI	If the trunk has an assigned PSTN telephone number, this field should be set to "User=Phone". Then a "User=Phone" parameter will be attached to the Request-Line and TO header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP request. The default setting is disabled.
Need Registration	<p>Select whether the trunk needs to register on the external server or not when "Register SIP Trunk" type is selected.</p> <p>The default setting is No.</p>
Allow outgoing calls if registration failure	<p>If enabled outgoing calls even if the registration to this trunk fail will still be able to go through.</p> <p>Note that if we uncheck "Need Registration" option, this option will be ignored.</p>
CallerID Name	Configure the new name of the caller when the extension has no CallerID Name configured.

From Domain	<p>Configure the actual domain name where the extension comes from. This can be used to override the "From" Header.</p> <p>For example, "trunk. FCM630A.provider.com" is the From Domain in From Header: sip:1234567@trunk.FCM630A.provider.com.</p>
From User	<p>Configure the actual username of the extension. This can be used to override the "From" Header. There are cases where there is a single ID for registration (single trunk) with multiple DIDs.</p> <p>For example, "1234567" is the From User in From Header: sip:1234567@trunk. FCM630A.provider.com.</p>
Username	Enter the username to register to the trunk from the provider when "Register SIP Trunk" type is selected.
Password	Enter the password to register to the trunk when "Register SIP Trunk" is selected.
Auth ID	Enter the Authentication ID for "Register SIP Trunk" type.
Auth Trunk	If enabled, the FCM will send 401 response to the incoming call to authenticate the trunk.
Auto Record	Enable automatic recording for the calls using this trunk (for SIP trunk only). The default setting is disabled. The recording files can be accessed under Web GUI→CDR→Recording Files.
Direct Callback	<p>Allows external numbers the option to get directed to the extension that last called them.</p> <p>For Example: User 2002 has dialed external number 061234575 but they were not reachable, once they have received missed call notification on their phone, they would mostly call back the number, if the option "Direct Callback" is enabled then they will be directly bridged to user 2002 regardless of the configured inbound destination.</p>

Advanced Settings

Codec Preference	Select codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.
Send PPI Header	If enabled, the SIP INVITE message sent to the trunk will contain PPI (P-Preferred-Identity) header. The default setting is “No”. Note: “Send PPI Header” and “Send PAI Header” cannot be enabled at the same time. Only one of the two headers can be contained in SIP INVITE message.
PPI Mode	Default – Include the trunk’s preferred CID (configured in <i>Basic Settings</i>) in the PPI Header. Original CID – Include the original CID in the PPI Header. DOD Number – Include the trunk’s DOD number in the PPI Header. If no DOD number has been set, the trunk’s preferred CID will be used.
Send PAI Header	If enabled, the SIP INVITE message sent to the trunk will contain PAI (P-Asserted-Identity) header including configured PAI Header. The default setting is “No”. Note: “Send PPI Header” and “Send PAI Header” cannot be enabled at the same time. Only one of the two headers can be contained in the SIP INVITE message.
PAI Header	If “Send PAI Header” is enabled and “PAI Header” is configured as “123456” for instance, the PAI header in the SIP message sent from the FCM will contain “123456”. If “Send PAI Header” is enabled and “PAI Header” is configured as “empty”, the PAI header in the SIP message sent from the FCM will contain the original CID. Note: “Send PAI Header” needs to be enabled to use this feature
Send Anonymous	If checked, the "From" header in outgoing INVITE message will be set to anonymous.
DOD As From Name	If enabled and "From User" is configured, the INVITE's From header will contain the DOD number.
Passthrough PAI Header	If checked and option "Send PAI Header" not checked, the PAI header will be passthrough from one side to the other side.

Send PANI Header	If checked, the INVITE and REGISTER sent to the trunk will contain P-Access-Network-Info header.
Access Network Info	The access network information in the P-Access-Network-Info header.
Send Anonymous	If checked, the "From" header in outgoing INVITE message will be set to anonymous.
Outbound Proxy Support	Select to enable outbound proxy in this trunk. The default setting is "No".
Outbound Proxy	When outbound proxy support is enabled, enter the IP address or URL of the outbound proxy.
Remove OBP from Route	It is used to set if the phone system will remove outbound proxy URI from the route header. If is set to "Yes", it will remove the route header from SIP requests. The default setting is "No".
DID Mode	Configure where to get the destination ID of an incoming SIP call, from SIP Request-line or To-header. The default is set to "Request-line".
GIN Registration	If enabled, the FCM will send a GIN REGISTER (generate implicit numbers).
DTMF Mode	Configure the default DTMF mode when sending DTMF on this trunk. <ul style="list-style-type: none"> • Default: The global setting of DTMF mode will be used. The global setting for DTMF Mode setting is under Web GUI→PBX Settings→SIP Settings→ToS. <ul style="list-style-type: none"> • RFC4733: Send DTMF using RFC4733. • Info: Send DTMF using SIP INFO message. • Inband: Send DTMF using inband audio. This requires 64-bit codec, i.e., PCMU and PCMA. • Auto: Send DTMF using RFC4733 if offered. Otherwise, inband will be used.
Enable Heartbeat Detection	If enabled, the FCM630A will regularly send SIP OPTIONS to the device to check if the device is still online. The default setting is "No".

Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval (in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
The Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limit.
Packet Loss Retransmission	Configure to enable Packet Loss Retransmission.
Audio FEC	Configure to enable Forward Error Correction (FEC) for audio.
Video FEC	Configure to enable Forward Error Correction (FEC) for video.
ICE support	Toggles ICE support. For peer trunks, ICE support will need to be enabled on the other end.
FECC	Configure to enable Far-end Camera Control
SRTP	Enable SRTP for the VoIP trunk. The default setting is "No".
Enable T.38 UDPTL	Enable or disable T.38 UDPTL support.
STIR/SHAKEN	Block disturbance calls, this function needs to be supported by the opposite end.
CC Settings	
Enable CC	If enabled, the system will automatically alert the user when a called party is available, given that a previous call to that party failed for some reason.
CC Max Agents	Configure the maximum number of CCSS agents which may be allocated for this channel. In other words, this number serves as the maximum number of CC requests this channel is allowed to make. The minimum value is 1.
CC Max Monitors	Configure the maximum number of monitor structures which may be created for this device. In other words, this number tells how many callers may request CC services for a specific device at one time. The minimum value is 1.

Table 51: SIP Peer Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules and etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Auto Record	Enable automatic recording for the calls using this trunk (for SIP trunk only). The default setting is disabled. The recording files can be accessed under Web GUI→CDR→Recording Files.
Keep Original CID	Keep the CID from the inbound call when dialing out, this setting will override "Keep Trunk CID" option. Please make sure that the peer PBX at the other side supports to match user entry using "username" field from authentication line.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
NAT	Turn on this option when the PBX is using public IP and communicating with devices behind NAT. If there is one-way audio issue, usually it is related to NAT configuration or SIP/RTP port configuration on the firewall.
Disable This Trunk	<p>If selected, the trunk will be disabled.</p> <p>Note: If a current SIP trunk is disabled, FCM will send UNREGISTER message (REGISTER message with expires=0) to the SIP provider.</p>
TEL URI	If the trunk has an assigned PSTN telephone number, this field should be set to "User=Phone". Then a "User=Phone" parameter will be attached to the Request-Line and TO header in the SIP request to indicate the E.164 number. If set to "Enable", "Tel:" will be used instead of "SIP:" in the SIP request. The default setting is disabled.
Caller ID Number	<p>Configure the Caller ID. This is the number that the trunk will try to use when making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored.</p> <p>Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call :</p> <ul style="list-style-type: none"> • CID from inbound call (Keep Original CID Enabled) → Trunk Username/CallerID (Keep Trunk CID Enabled) → DOD → Extension CallerID Number → Trunk Username/CallerID (Keep Trunk CID Disabled) → Global

CallerID Name	<p style="text-align: center;">Outbound CID.</p> <p>Configure the name of the caller to be displayed when the extension has no CallerID Name configured.</p>
Transport	<p>Configure the SIP transport protocol to be used in this trunk. The default setting is "UDP".</p> <ul style="list-style-type: none"> • UDP • TCP • TLS
Direct Callback	<p>Allows external numbers the option to get directed to the extension that last called them.</p> <p>For Example: User 2002 has dialed external number 061234575 but they were not reachable, once they have received missed call notification on their phone, they would mostly call back the number, if the option "Direct Callback" is enabled then they will be directly bridged to user 2002 regardless of the configured inbound destination.</p>

Advanced Settings

Codec Preference	<p>Select codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.</p>
Send PPI Header	<p>If checked, the invite message sent to trunks will contain PPI (P-Preferred-Identity) Header.</p>
Send PAI Header	<p>If checked, the INVITE, 18x and 200 SIP messages sent to trunks will contain P-Asserted-Identity (PAI) header. It is not possible to send both PPI and PAI headers.</p>
Passthrough PAI Header	<p>If enabled and "Send PAI Header" is disabled, PAI headers will be preserved as calls pass through the FCM.</p>
Send PANI Header	<p>If checked, the INVITE sent to the trunk will contain P-Access-Network-Info</p>

	header.
Send Anonymous	If checked, the "From" header in outgoing INVITE message will be set to anonymous.
DID Mode	Configure where to get the destination ID of an incoming SIP call, from SIP Request-line or To-header. The default is set to "Request-line".
DTMF Mode	<p>Configure the default DTMF mode when sending DTMF on this trunk.</p> <ul style="list-style-type: none"> • Default: The global setting of DTMF mode will be used. The global setting for DTMF Mode setting is under Web GUI→PBX Settings→SIP Settings→ToS. • RFC4733: Send DTMF using RFC4733. • Info: Send DTMF using SIP INFO message. • Inband: Send DTMF using inband audio. This requires 64-bit codec, i.e., PCMU and PCMA. • Auto: Send DTMF using RFC4733 if offered. Otherwise, inband is used.
Enable Heartbeat Detection	If enabled, the FCM630A will regularly send SIP OPTIONS to the device to check if the device is still online. The default setting is "No".
Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval (in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limit.
Packet Loss Retransmission	Configure to enable Packet Loss Retransmission.
Audio FEC	Configure to enable Forward Error Correction (FEC) for audio.
Video FEC	Configure to enable Forward Error Correction (FEC) for video.
ICE support	Toggles ICE support. For peer trunks, ICE support will need to be enabled on the other end.

FECC	Configure to enable Far-end Camera Control
SRTP	Enable SRTP for the VoIP trunk. The default setting is "No".
IPVT Mode	Configures the FCM to be used exclusively for IPVT. Warning: This will lock out certain FCM features.
Sync LDAP Enable	Automatically sync local LDAP phonebooks to a remote peer (SIP peer trunk only). To ensure successful syncing, the remote peer must also enable this service and set the same password as the local FCM. Port 873 is used by default.
Sync LDAPPassword	Password used for LDAP phonebook encryption and decryption. The password must be the same for both peers to ensure successful syncing.
LDAP Outbound Rule	Specify an outbound rule for LDAP sync feature. The FCM630A will automatically modify the remote contacts by adding prefix parsed from this rule.
LDAP Dialed Prefix	Specify the prefix for LDAP sync feature. The FCM630A will automatically modify the remote contacts by adding this prefix.
LDAP Last Sync Date	The last successful sync date.
Enable T.38 UDPTL	Enable or disable T.38 UDPTL support.
STIR/SHAKEN	Block disturbance calls, this function needs to be supported by the opposite end.
CC Settings	
Enable CC	If enabled, the system will automatically alert the user when a called party is available, given that a previous call to that party failed for some reason.
CC Max Agents	Configure the maximum number of CCSS agents which may be allocated for this channel. In other words, this number serves as the maximum number of CC requests this channel can make. The minimum value is 1.
CC Max Monitors	Configure the maximum number of monitor structures which may be created for this device. In other words, this number tells how many callers may request CC services for a specific device at one time. The minimum value is 1.

Table 52: Create New IAX Trunk

Type	<p>Select the VoIP trunk type.</p> <ul style="list-style-type: none"> • Peer IAX Trunk • Register IAX Trunk
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
Username	Enter the username to register to the trunk from the provider when "Register IAX Trunk" type is selected.
Password	Enter the password to register to the trunk from the provider when "Register IAX Trunk" type is selected.
Disable This Trunk	If selected, the trunk will be disabled.
Caller ID Number	<p>Number that the trunk will try to use when making outbound calls.</p> <p>CID priority from highest to lowest is as follows:</p> <p>From User (register trunk only) >>> Inbound Call CID (if Keep Original CID is enabled and the call is originally from another trunk) >>> Trunk CID (Keep Trunk CID enabled) >>> DOD CID >>> Extension CID >>> Register Trunk Username (Keep Trunk CID disabled) >>> Global Outbound CID.</p> <p>Note 1: Certain providers may ignore this CID.</p> <p>Note 2: If this CID contains asterisk (*), call recordings from this trunk might be lost when saving them to NAS storage.</p>
CallerID Name	Configure the new name of the caller when the extension has no CallerID Name configured.

Table 53: IAX Register Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
Disable This Trunk	If selected, the trunk will be disabled.
Caller ID	<p>Configure the Caller ID. This is the number that the trunk will try to use when making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored.</p> <p>Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call :</p> <p>From user (Register Trunk Only) → CID from inbound call (Keep Original CID Enabled) → Trunk Username/CallerID (Keep Trunk CID Enabled) → DOD → Extension CallerID Number → Trunk Username/CallerID (Keep Trunk CID Disabled) → Global Outbound CID.</p>
CallerID Name	Configure the name of the caller to be displayed when the extension has no CallerID Name configured.
Username	Enter the username to register to the trunk from the provider.
Password	Enter the password to register to the trunk from the provider.
Advanced Settings	
Codec Preference	Select codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.
Enable Heartbeat Detection	If enabled, the FCM630A will regularly send SIP OPTIONS to the device to check if the device is still online. The default setting is "No".
Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval

	(in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limited.

Table 54: IAX Peer Trunk Configuration Parameters

Basic Settings	
Provider Name	Configure a unique label to identify this trunk when listed in outbound rules, inbound rules etc.
Host Name	Configure the IP address or URL for the VoIP provider's server of the trunk.
Keep Trunk CID	If enabled, the trunk CID will not be overridden by extension's CID when the extension has CID configured. The default setting is "No".
Disable This Trunk	If selected, the trunk will be disabled.
Caller ID	<p>Configure the Caller ID. This is the number that the trunk will try to use when making outbound calls. For some providers, it might not be possible to set the CallerID with this option and this option will be ignored.</p> <p>Important Note: When making outgoing calls, the following priority order rule will be used to determine which CallerID will be set before sending out the call :</p> <p>CID from inbound call (Keep Original CID Enabled) → Trunk Username/CallerID (Keep Trunk CID Enabled) → DOD → Extension CallerID Number → Trunk Username/CallerID (Keep Trunk CID Disabled) → Global Outbound CID..</p>
CallerID Name	Configure the name of the caller to be displayed when the extension has no CallerID Name configured.
Advanced Settings	
Codec Preference	Select codec for the VoIP trunk. The available codecs are: PCMU, PCMA, GSM, AAL2-G.726-32, G.726, G.722, G.729, G.723, iLBC, ADPCM, H.264, H.265, H.263, H.263p and VP8.
Enable Heartbeat	If enabled, the FCM630A will regularly send SIP OPTIONS to the device to check

Detection	if the device is still online. The default setting is "No".
Heartbeat Frequency	When "Enable Heartbeat Detection" option is set to "Yes", configure the interval (in seconds) of the SIP OPTIONS message sent to the device to check if the device is still online. The default setting is 60 seconds.
Maximum Number of Call Lines	The maximum number of concurrent calls using the trunk. The default settings 0, which means no limited.

Trunk Groups

Users can create VoIP Trunk Groups to register and easily apply the same settings on multiple accounts within the same SIP server. This can drastically reduce the amount of time needed to manage accounts for the same server and improve the overall cleanliness of the web UI.

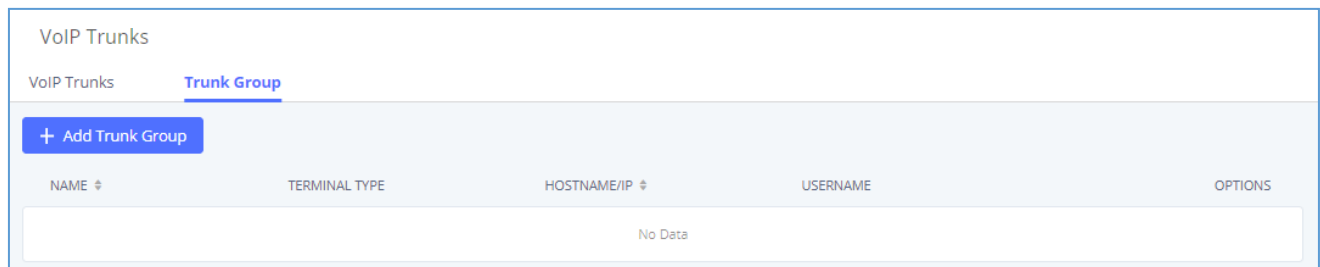

Figure 85: Trunk Group

Once creating the new trunk group and configuring the SIP settings, users can add multiple accounts within the configured SIP server by pressing \oplus button and configuring the username, password, and authentication ID fields.

Create New Trunk Group

Type: Register SIP Trunk

* Provider Name: Please select a provider

* Host Name:

Transport: UDP

Direct Callback:

RemoteConnect Mode:

Figure 86: Trunk Group Configuration

Direct Outward Dialing (DOD)

The FCM630A provides Direct Outward Dialing (DOD) which is a service of a local phone company (or local exchange carrier) that allows subscribers within a company's PBX system to connect to outside lines directly.

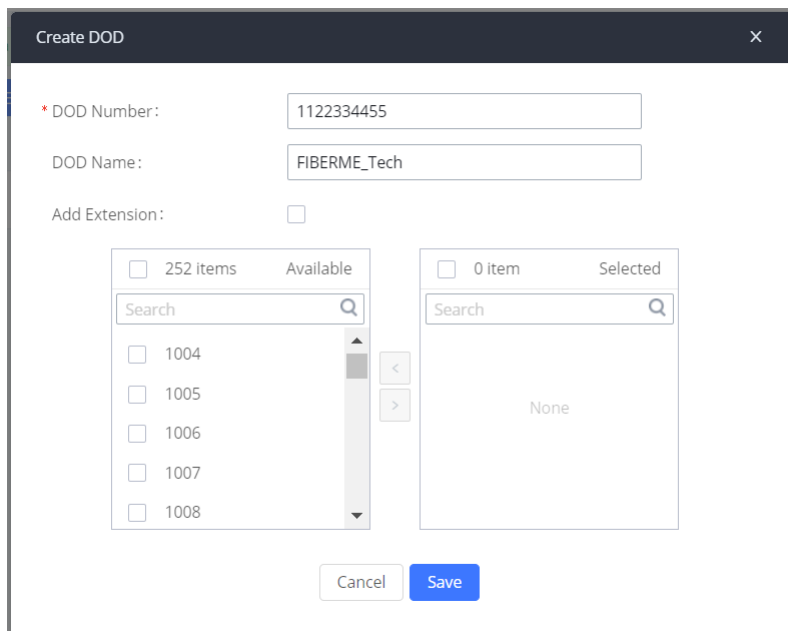

Example of how DOD is used:

Company ABC has a SIP trunk. This SIP trunk has 4 DIDs associated to it. The main number of the office is routed to an auto attendant. The other three numbers are direct lines to specific users of the company. Now when a user makes an outbound call their caller ID shows up as the main office number. This poses a problem as the CEO would like their calls to come from their direct line. This can be accomplished by configuring DOD for the CEO's extension.

Steps to configure DOD on the FCM630A:

1. To setup DOD go to FCM630A Web GUI→**Extension/Trunk**→**VoIP Trunks** page.
2. Click  to access the DOD options for the selected SIP Trunk.
3. Click "Add DOD" to begin your DOD setup
4. For "DOD Number" enter one of the numbers (DIDs) from your SIP trunk provider. In the example above Company ABC received 4 DIDs from their provider. ABC will enter in the number for the CEO's direct line.
5. Set the DOD name and If extension number need to be appended to the DID number click on "Add Extension".
6. Select an extension from the "Available Extensions" list. Users have the option of selecting more than one extension. In this case, Company ABC would select the CEO's extension. After making the selection, click on the  button to move the extension(s) to the "Selected Extensions" list.

The screenshot shows a "Create DOD" dialog box. At the top, there's a title bar with "Create DOD" and a close button. Below that, there are three input fields: "DOD Number" (containing "1122334455"), "DOD Name" (containing "FIBERME_Tech"), and "Add Extension" (with an unchecked checkbox). Below these are two list boxes. The "Available" list has a search bar and a scrollable list of extensions: 1004, 1005, 1006, 1007, and 1008. The "Selected" list has a search bar and the text "None". At the bottom, there are "Cancel" and "Save" buttons.

Figure 87: DOD extension selection

7. Click "Save" at the bottom.

Once completed, the user will return to the EDIT DOD page that shows all the extensions that are associated to a particular DOD.

< DOD

Direct Outward Dialing (DOD) is a service of a local phone company or local exchange carrier that allows subscribers within a company's PBX system to connect to outside lines directly.

Figure 88: Edit DOD

Note: Users can import and export DOD files.

CALL ROUTES

Outbound Routes

In the following sections, we will discuss the steps and parameters used to configure and manage outbound rules in FCM630A, these rules are the regulating points for all external outgoing calls initiated by the FCM through all types of trunks: SIP and IAX.

Configuring Outbound Routes

In the FCM630A, an outgoing calling rule pairs an extension pattern with a trunk used to dial the pattern. This allows different patterns to be dialed through different trunks. Users can also set up a failover trunk to be used when the primary trunk fails.

Go to Web GUI → **Extension/Trunk** → **Outbound Routes** to add and edit outbound rules.

- Click on  to add a new outbound route.
- Click on  to edit the outbound route.
- Click on  to delete the outbound route.

On the FCM630A, the outbound route priority is based on “Best matching pattern”. For example, the FCM630A has outbound route A with pattern 1xxx and outbound route B with pattern 10xx configured. When dialing 1000 for outbound call, outbound route B will always be used first. This is because pattern 10xx is a better match than pattern 1xxx. Only when there are multiple outbound routes with the same pattern configured.

Table 55: Outbound Route Configuration Parameters

Outbound Rule Name	Configure the name of the calling rule (e.g., local, long_distance, and etc.). Letters, digits, _ and - are allowed.
Pattern	All patterns are prefixed by "_" character, but please do not enter more than one "_" at the beginning. All patterns can add comments, such as "_pattern /* comment */". In patterns, some characters have special meanings: <ul style="list-style-type: none">• [12345-9] ... Any digit in the brackets. In this example, 1,2,3,4,5,6,7,8,9 is allowed.

	<ul style="list-style-type: none"> • N ... Any digit from 2-9. •Wildcard, matching one or more characters. • !.....Wildcard, matching zero or more characters immediately. • XAny digit from 0-9. • ZAny digit from 1-9. •Hyphen is to connect characters and it will be ignored. • [] Contain special characters ([x], [n], [z]) represent letters x, n, z.
Disable This Route	After creating the outbound route, users can choose to enable and disable it. If the route is disabled, it will not take effect anymore. However, the route settings will remain in FCM. Users can enable it again when it is needed.
Password	Configure the password for users to use this rule when making outbound calls.
Local Country Code	If your local country code is affected by the outbound blacklist, please enter it here to bypass the blacklist.
Call Duration Limit	Enable to configure the maximum duration for the call using this outbound route.
Maximum Call Duration	Configure the maximum duration of the call (in seconds). The default setting is 0, which means no limit.
Warning Time	Configure the warning time for the call using this outbound route. If set to x seconds, the warning tone will be played to the caller when x seconds are left to end the call.
Auto Record	If enabled, calls using this route will automatically be recorded.
Warning Repeat Interval	Configure the warning repeat interval for the call using this outbound route. If set to X seconds, the warning tone will be played every x seconds after the first warning.
PIN Groups	Select a PIN Group
PIN Groups with Privilege Level	If enabled and PIN Groups are used, Privilege Levels and Filter on Source Caller ID will also be applied.

<p>Privilege Level</p>	<p>Select privilege level for the outbound rule.</p> <ul style="list-style-type: none"> • Internal: The lowest level required. All users can use this rule. • Local: Users with Local, National, or International level can use this rule. • National: Users with National or International level can use this rule. • International: The highest level required. Only users with international level can use this rule. • Disable: The default setting is "Disable". If selected, only the matched source caller ID will be allowed to use this outbound route. <p>Please be aware of the potential security risks when using "Internal" level, which means all users can use this outbound rule to dial out from the trunk.</p>
<p>Enable Filter on Source Caller ID</p>	<p>When enabled, users could specify extensions allowed to use this outbound route. "Privilege Level" is automatically disabled if using "Enable Filter on Source Caller ID".</p> <p>The following two methods can be used at the same time to define the extensions as the source caller ID.</p> <ol style="list-style-type: none"> 1. Select available extensions/extension groups from the list. This allows users to specify arbitrary single extensions available in the PBX. 2. Custom Dynamic Route: define the pattern for the source caller ID. This allows users to define extension range instead of selecting them one by one. <ul style="list-style-type: none"> • All patterns are prefixed with the "_". • Special characters: <ul style="list-style-type: none"> X: Any Digit from 0-9. Z: Any Digit from 1-9. N: Any Digit from 2-9. ": Wildcard. Match one or more characters. !": Wildcard. Match zero or more characters immediately.

Outbound Route CID	<p>Example: [12345-9] - Any digit from 1 to 9.</p> <p><u>Note:</u> Multiple patterns can be used. Patterns should be separated by comma “,”. Example: _X. , _NNXXNXXXXX , _818X.</p> <p>Attempt to use the configured outbound route CID. This CID will not be used if DOD is configured.</p>
---------------------------	---

Send This Call Through Trunk

Trunk	Select the trunk for this outbound rule.
Strip	<p>Allows the user to specify the number of digits that will be stripped from the beginning of the dialed string before the call is placed via the selected trunk.</p> <p style="text-align: center;"><u>Example:</u></p> <p>The users will dial 9 as the first digit of a long-distance calls. However, 9 should not be sent out via the trunk. In this case, 1 digit should be stripped before the call is placed.</p>
Prepend	Specify the digits to be prepended before the call is placed via the trunk. Those digits will be prepended after the dialing number is stripped.

Use Failover Trunk

Failover Trunk	<p>Failover trunks can be used to make sure that a call goes through an alternate route when the primary trunk is busy or down. If "Use Failover Trunk" is enabled and "Failover trunk" is defined, the calls that cannot be placed via the regular trunk may have a secondary trunk to go through.</p> <p>FCM630A support up to 10 failover trunks.</p>
-----------------------	--

Strip	<p>Allows the user to specify the number of digits that will be stripped from the beginning of the dialed string before the call is placed via the selected trunk.</p> <p style="text-align: center;"><u>Example:</u></p> <p>The users will dial 9 as the first digit of a long-distance calls. However, 9 should not be sent out via the trunk. In this case, 1 digit should be stripped before the call is placed.</p>
Prepend	<p>Specify the digits to be prepended before the call is placed via the trunk. Those digits will be prepended after the dialing number is stripped.</p>
Time Condition	
Time Condition Mode	<p>Use Main Trunk or Failover Trunk: Use the Main Trunk and its settings during the configured time conditions. If the main trunk is unavailable, the Failover Trunk and its settings will be used instead.</p> <p>Use Specific Trunks: Use specific trunks during the configured time conditions. The Strip and Prepend settings of the Main Trunk will be used. If a trunk is unavailable during its time condition, no failover trunks will be used.</p>

Outbound Blacklist

The FCM630A allows users to configure blacklist for outbound routes. If the dialing number matches the blacklist numbers or patterns, the outbound call will not be allowed. The outbound blacklist can be configured under FCM Web GUI → Extension/Trunk → Outbound Routes: Outbound Blacklist.

Users can configure numbers, patterns or select country code to add in the blacklist. Please note that the blacklist settings apply to all outbound routes.

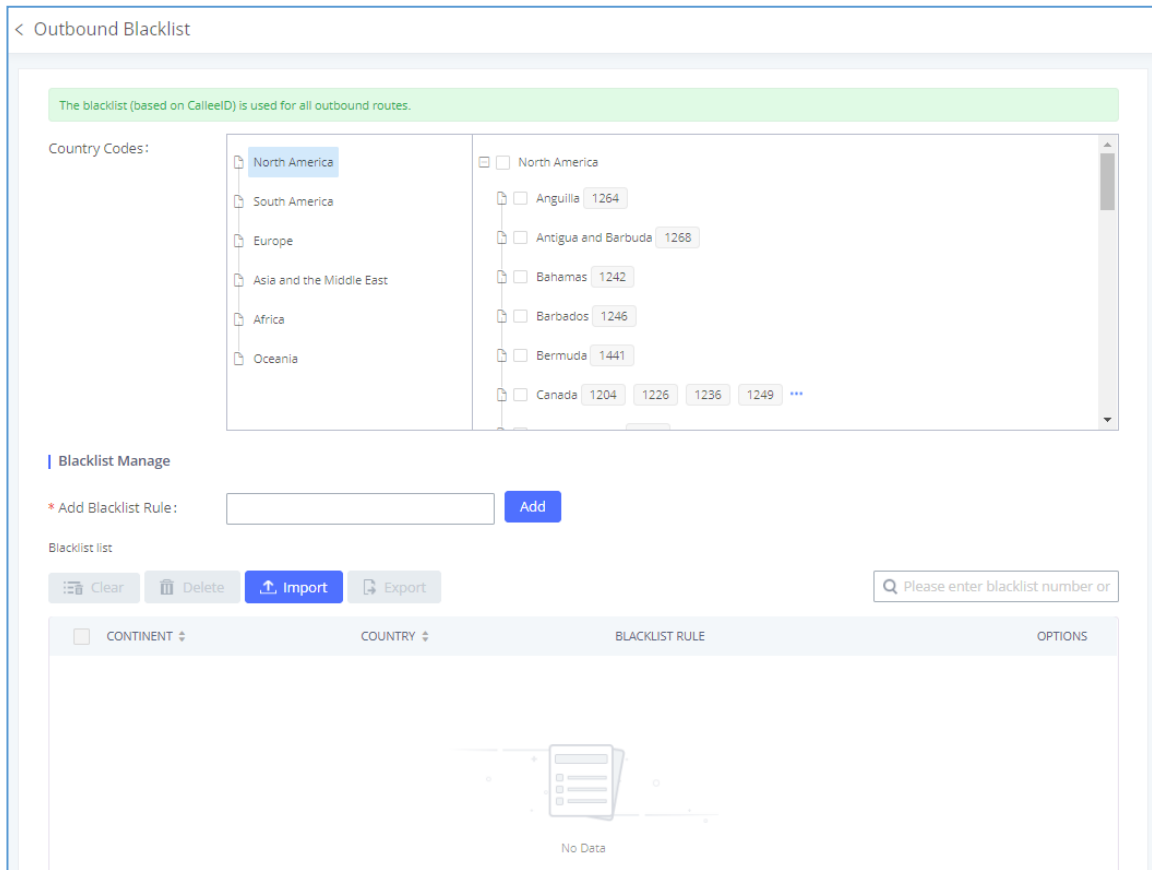

Figure 89: Country Codes

Note: Users can export outbound route blacklists and delete all blacklist entries. Additionally, users can also import blacklists for outbound routes.

Figure 90: Blacklist Import/Export

Scheduled Sync

The FCM630A allows users to synchronize the outbound routes, this feature can be found on the WebGUI → **Extension/Trunk** → **Outbound Routes** → **Scheduled Sync**.

Table 56: Outbound Routes/Scheduled Sync

Scheduled Sync	Enable the Scheduled Sync feature
Server Address	Enter the TFTP server address. For example, "192.168.1.2:69".
File Name	Specify the file name
Sync Time	Enter the sync time (24hr format). Valid range is 0-23.
Sync Frequency	Create new sync every x day(s). The valid range is 1 to 30.

PIN Groups

The FCM630A supports pin group. Once this feature is configured, users can apply pin group to specific outbound routes. When placing a call on pin protected outbound routes, caller will be asked to input the group pin number, this feature can be found on the WebGUI → **Extension/Trunk** → **Outbound Routes** → **PIN Groups**.

Table 57: Outbound Routes/PIN Group

Name	Specify the name of the group
Record In CDR	Specify whether to enable/disable record in CDR
PIN Number	Specify the code that will be asked once dialing via a trunk
PIN Name	Specify the name of the PIN

Once user clicks on [PIN Groups](#) the following figure shows to configure the new PIN.

Create New PIN Group

* Name:

Record in CDR:

| Members

* PIN Number:

* PIN Name:

Figure 91: Create New PIN Group

The following screenshot shows an example of created PIN Groups and members:

< PIN Groups

+ Add Upload

NAME	RECORD IN CDR	OPTIONS
FIBERME_Support_Team	yes	
PIN NUMBER PIN NAME		
12761	Mark	
16531	Jon	
88721	Emma	

Figure 92: PIN Members

Note:

If PIN group is enabled on outbound route level, password, privilege level and enable filter on source caller ID will be disabled, unless if you check the option "PIN Groups with Privilege Level" where you can use the PIN Groups and Privilege Level or PIN Groups and Enable Filter on Source Caller ID.

General

* Outbound Rule Name: Disable This Route:

* Pattern: Privilege Level:

PIN Groups: PIN Groups with Privilege Level:

Password: Auto Record:

Figure 93: Outbound PIN

If PIN group CDR is enabled, the call with PIN group information will be displayed as part of CDR under AccountCode field.

- Importing PIN Groups from CSV files:

User can also import PIN Groups by uploading CSV files for each group. To do this:

1. Navigate to **Extension/Trunk**→**Outbound Routes**→**PIN Groups** and click on the “Upload” button.

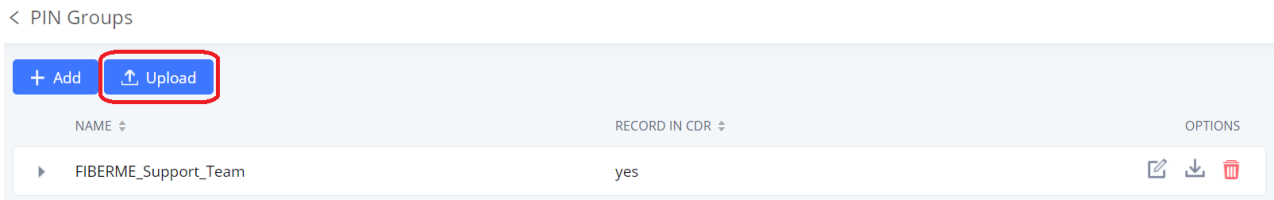

Figure 94: Importing PIN Groups from CSV files

2. Select the CSV file to upload. Incorrect file formats and improperly formatted CSV files will result in error messages such as the one below:

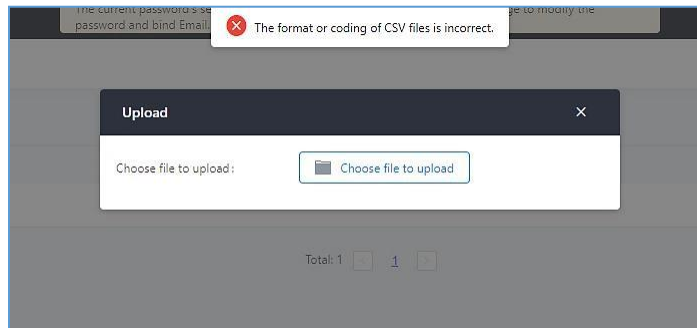

Figure 95: Incorrect CSV File

3. To ensure a successful import, please follow the format in the sample image below

	A	B	C	D
1	ALPHA			
2	pin	pin_name		
3	1625	test1		
4	9497	test2		
5	5872	test3		
6				
7				

Figure 96: CSV File Format

- The top-left value (A1) is the PIN Group name. In this case, it is “ALPHA”.
- Row 2 contains the labels for the modifiable fields: pin and pin_name. These values should not be changed and will cause an upload error otherwise.
- Rows 3+ contain the user-defined values with Column A holding the PINs and Column B holding the PIN names. PIN values must consist of at least four digits.
- Once the file is successfully uploaded, the entry will be added to the list of PIN Groups.

< PIN Groups

NAME	RECORD IN CDR	OPTIONS
FIBERME_Support_Team	yes	  

Figure 97: CSV File Successful Upload

Inbound Routes

Inbound routes can be configured via Web GUI→**Extension/Trunk**→**Inbound Routes**.

- Click on  to add a new inbound route.
- Click on "Blacklist" to configure blacklist for all inbound routes.
- Click on  to edit the inbound route.
- Click on  to delete the inbound route.

Inbound Rule Configurations

Table 58: Inbound Rule Configuration Parameters

Trunks	Select the trunk to configure the inbound rule.
Inbound Route Name	Configure the name of the Inbound Route. For example, "Local", "LongDistance" and etc.

Pattern

- All patterns are prefixed with the "_".
 - Special characters:

X: Any Digit from 0-9.

Z: Any Digit from 1-9.

N: Any Digit from 2-9.

".": Wildcard. Match one or more characters.

"!": Wildcard. Match zero or more characters immediately.

Example: [12345-9] - Any digit from 1 to 9.

- The pattern can be composed of two parts, *Pattern* and *CallerID Pattern*. The first part is used to specify the dialed number while the second part is used to specify the caller ID and it is optional, if set it means only the extension with the specific caller ID can call in or call out. For example, pattern '_2XXX/1234' means the only extension with the caller ID '1234' can use this rule.

Note:

- Multiple patterns can be used. Each pattern should be entered in new line.
- Users can add comments to the end of patterns to better organize and keep track of complex rules by typing "/" and "*" before and after each comment respectively

Example:

Pattern	CallerID Pattern
_X.	1000
_ NNXXNXXXXX /* 10-digit long distance */	1001

Disable This Route

After creating the inbound route, users can choose to enable and disable it. If the route is disabled, it will not take effect anymore. However, the route settings will remain in FCM. Users can enable it again when it is needed.

Seamless Transfer Whitelist	Allows the selected extension to use this function. If an extension is busy, and a mobile phone is bound to that extension, the mobile phone can pick up calls to that extension.
Ringback tone	Choose the custom ring back tone to play when caller reaches the route.
Auto Record	If enabled, calls using this route will automatically be recorded.
Block Collect Call	If enabled, collect calls will be blocked. Note: Collect calls are indicated by the header "P-Asserted-Service-Info: service-code=Backward Collect Call, P-Asserted-Service-Info: service-code=Collect Call".
Alert-Info	Configure the Alert-Info, when FCM receives an INVITE request, the Alert-Info header field specifies an alternative ring tone to the UAS.
Fax Detection	If enabled, fax signals from the trunk during a call will be detected.
Fax Destination	Configures the destination of faxes. <ul style="list-style-type: none"> • Extension: send the fax to the designated FAX extension. • Fax to Email: send the fax as an email attachment to the designated extension's email address. If the selected extension does not have an associated email address, it will be sent to the default email address configured in the <i>Call Features->Fax/T.38->Fax Settings</i> page. <p>Note: please make sure the sending email address is correctly configured in System Settings->Email Settings.</p>
Prepend Trunk Name	If enabled, the trunk name will be added to the caller id name as the displayed caller id name.
Set Caller ID Info	Manipulates Caller ID (CID) name and/or number within the call flow to help identify who is calling. When enabled two field will show allowing to manipulate the CalleID Number and the Caller ID Name.
CalleID Number	Configure the pattern-matching format to manipulate the numbers of incoming callers or to set a fixed CallerID number for calls that go through this inbound

	<p>route.</p> <ul style="list-style-type: none"> • `\${CALLERID(num)}`: Default value which indicates the number of an incoming caller (CID). The CID will not be modified. • `\${CALLERID(num):n}`: Skips the first n characters of a CID number, where n is a number. • `\${CALLERID(num):-n}`: Takes the last n characters of a CID number, where n is a number. • `\${CALLERID(num):s:n}`: Takes n characters of a CID number starting from s+1, where n is a number and s is a character position (e.g. <code>`\${CALLERID(num):2:7}`</code> takes 7 characters after the second character of a CID number). • n`\${CALLERID(num)}`: Prepends n to a CID number, where n is a number.
CallerID Name	<p>Default string is `\${CALLERID(name)}`, which means the name of an incoming caller, it is a pattern-matching syntax format.</p> <p>A`\${CALLERID(name)}`B means Prepend a character 'A' and suffix a character 'B' to `\${CALLERID(name)}`.</p> <p>Not using pattern-matching syntax means setting fix name to incoming caller.</p>
Enable Route-Level Inbound Mode	<p>Gives uses the ability to configure inbound mode per individual route. When enabled two field will show allowing to set the Inbound mode and the Inbound mode Suffix.</p> <p>Note: Global inbound mode must be enabled before users can configure route-level inbound mode</p>
Inbound Mode	<p>Choose the inbound mode for this route.</p> <p>Note: Toggling the global inbound mode will not affect routes that have Route-level Inbound Mode enabled. If all routes have the option enabled, toggling the global inbound mode via BLF will trigger a voice prompt indicating that none of the routes will be affected by the global inbound mode change.</p>
Inbound Mode Suffix	<p>Dial "Global Inbound Mode feature code + Inbound Mode Suffix" or a route's assigned suffix to toggle the route's inbound mode.</p>

	The BLF subscribed to the inbound mode suffix can monitor the current inbound mode.
Inbound Multiple Mode	Multiple mode allows user to switch between destinations of the inbound rule by feature codes. Configure related feature codes as described in [Inbound Route: Multiple Mode] . If this option is enabled, user can use feature code to switch between different modes/destinations.
Dial Trunk	This option shows up only when "By DID" is selected. If enabled, the external users dialing in to the trunk via this inbound route can dial outbound call using the FCM's trunk.
Privilege Level	<p>This option shows up only when "By DID" is selected.</p> <ul style="list-style-type: none"> • Disable: Only the selected Extensions or Extension Groups are allowed to use this rule, when enabled Filter on Source Caller ID. • Internal: The lowest level required. All users are allowed to use this rule, check this level might be risky for security purpose. • Local: User with Local level, National or International level are allowed to use this rule. • National: Users with National or International Level are allowed to use this rule. • International: The highest level required. Only users with international level are allowed to use this rule.
Allowed DID Destination	<p>This option shows up only when "By DID" is selected. This controls the destination that can be reached by the external caller via the inbound route. The DID destination are:</p> <ul style="list-style-type: none"> • Extension • Meeting • Call Queue • Ring Group • Paging/Intercom Groups • IVR

	<ul style="list-style-type: none"> • Voicemail Groups • Dial By Name • All
Default Destination	<p>Select the default destination for the inbound call.</p> <ul style="list-style-type: none"> • Extension • Voicemail • Meeting Room • Call Queue • Ring Group • Paging/Intercom • Voicemail Group • DISA • IVR • External Number • By DID <p>When "By DID" is used, the FCM will look for the destination based on the number dialed, which could be local extensions, meeting, call queue, ring group, paging/intercom group, IVR and voicemail groups as configured in "DID destination". If the dialed number matches the DID pattern, the call will be allowed to go through.</p> <ul style="list-style-type: none"> • Dial By Name • Callback
Strip	Specify the number of digits to strip from the beginning of the DID. This is used when "By DID" is selected in "Default Destination".
Prepend	Specify the digits to be prepended before the call is placed via the trunk. Those digits will be prepended after the dialing number is stripped.

Time Condition	
Start Time	Select the start time "hour:minute" for the trunk to use the inbound rule.
End Time	Select the end time "hour:minute" for the trunk to use the inbound rule.
Date	Select "By Week" or "By Day" and specify the date for the trunk to use the inbound rule.
Week	Select the day in the week to use the inbound rule.
Destination	<p>Select the destination for the inbound call under the defined time condition.</p> <ul style="list-style-type: none"> • Extension • Voicemail • Meeting Room • Call Queue • Ring Group • Paging/Intercom • Voicemail Group <ul style="list-style-type: none"> • DISA • IVR • By DID <p>When "By DID" is used, the FCM will look for the destination based on the number dialed, which could be local extensions, meeting, call queue, ring group, paging/intercom group, IVR and voicemail groups as configured in "DID destination". If the dialed number matches the DID pattern, the call will be allowed to go through.</p> <p>Configure the number of digits to be stripped in "Strip" option.</p> <ul style="list-style-type: none"> • Dial By Name • External Number • Callback

Inbound Route: Prepend Example

FCM630A now allows user to prepend digits to an inbound DID pattern, with strip taking precedence over prepend. With the ability to prepend digits in inbound route DID pattern, user no longer needs to create multipleroutes for the same trunk to route calls to different extensions. The following example demonstrates the process:

1. If Trunk provides a DID pattern of 18005251163.
2. If **Strip** is set to 8, FCM630A will strip the first 8 digits.
3. If **Prepend** is set to 2, FCM630A will then prepend a 2 to the stripped number, now the number become2163.
4. FCM630A will now forward the incoming call to extension 2163.

The screenshot displays the configuration interface for an Inbound Route. The 'Trunks' dropdown is set to 'SIPTrunks -- test'. The 'Pattern' field contains '_18005251163'. The 'Strip' field is set to '8' and the 'Prepend' field is set to '2'. The 'Default Destination' is set to 'By DID'. Other settings include 'Alert-info: None', 'Fax Detection: []', 'Block Collect Calls: []', 'Set CallerID Info: []', 'Dial Trunk: []', 'Inbound Multiple Mode: []', 'CallerID Pattern: []', 'Allowed to seamless transfer: []', 'Prepend Trunk Name: []', 'Enable Route-Level Inbound Mode: []', and 'Allowed DID Destination: Extension x'.

Figure 98: Inbound Route feature: Prepend

Inbound Route: Multiple Mode

In the FCM630A, the user can configure inbound route to enable multiple mode to switch between different destinations. The inbound multiple mode can be enabled under Inbound Route settings.

* Trunks: SIPTrunks -- test

* Pattern: _18005251163

Disable This Route:

Alert-info: None

Fax Detection:

Block Collect Calls:

Set CallerID Info:

CallerID Pattern:

Allowed to seamless transfer:

Prepend Trunk Name:

Enable Route-Level Inbound Mode:

Inbound Multiple Mode:

Default Mode Mode 1

* Default Destination: Extension 1000

Figure 99: Inbound Route - Multiple Mode

When Multiple Mode is enabled for the inbound route, the user can configure a “Default Destination” and a “Mode1” destination for all routes. By default, the call coming into the inbound routes will be routed to the default destination.

SIP end devices that have registered on the FCM630A can dial feature code *62 to switch to inbound route “Mode 1” and dial feature code *61 to switch back to “Default Destination”. Switching between different mode can be easily done without Web GUI login.

For example, the customer service hotline destination has to be set to a different IVR after 7PM. The user can dial *62 to switch to “Mode 1” with that IVR set as the destination before off work.

To customize feature codes for “Default Mode” and “Mode 1”, click on [Set Global Inbound Mode](#) under “Inbound Routes” page, check “Enable Inbound Multiple Mode” option and change “Inbound Default Mode” and “Inbound Mode 1” values (By default, *61 and *62 respectively).

Set Global Inbound Mode

Caution: Disabling Inbound Multiple Mode will switch the inbound mode to default mode.

Enable Inbound Multiple

Prepend Trunk Name:

Enable Route-Level Inbound

Mode:

* Inbound Mode Suffix:

Figure 101: Inbound Route - Route-Level Mode

Global inbound mode must be enabled before configuring Route-Level Inbound Mode. Additionally, the Mode 1 must be configured as well.

When Route-Level Inbound Mode is enabled, the user can configure a “Default Destination” and a “Mode 1” destination for each specific route. By default, the call coming into this specific inbound route will be routed to the default destination.

Users can toggle the route's inbound mode by dialing "Global Inbound Mode feature code + Inbound Mode Suffix" and the current inbound route can be monitored by subscribing a BLF to the Inbound Mode Suffix.

For example, Inbound Default Mode feature code is set to *61 and the Inbound Mode suffix for route 1 is set to

1010. To switch the mode of route 1 to Default Mode, users can dial *611010.

Note: Toggling the global inbound mode will not affect routes that have *Route-level Inbound Mode* enabled. If all routes have the option enabled, toggling the global inbound mode via BLF will trigger a voice prompt indicating that none of the routes will be affected by the global inbound mode change.

Inbound Route: Inbound Mode BLF Monitoring

Users can assign MPKs and VPKs to monitor and toggle the current global inbound mode of the FCM. To do this, please refer to the following steps:

1. Access the FCM web GUI and navigate to Extension/Trunk→Inbound Routes.
2. Click on the  button and enable Inbound Multiple Mode.
3. Edit the subscribe number field to the desired BLF value.

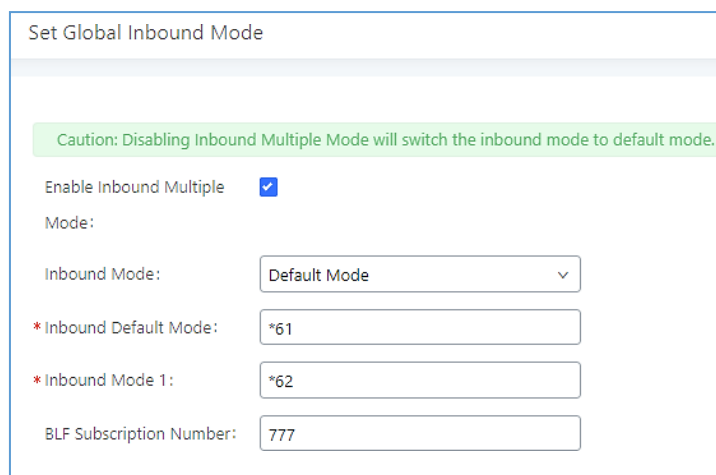

Figure 102: Global Inbound Mode

4. Configure the BLF value on a phone's MPK/VPK. As an example, a FAP2604P with the BLF configured will show the Inbound Mode status on its screen once configured. The 777 BLF is lit green, indicating that the current inbound mode is "Default Mode".
5. Pressing the key will toggle the inbound mode to "Mode 1", and the button's color will change to red.

Inbound Route: Import/Export Inbound Route

Users can now import and export inbound routes to quickly set up inbound routing on a FCM or to back up an existing configuration. An exported inbound route configuration can be directly imported without needing any manual modifications.

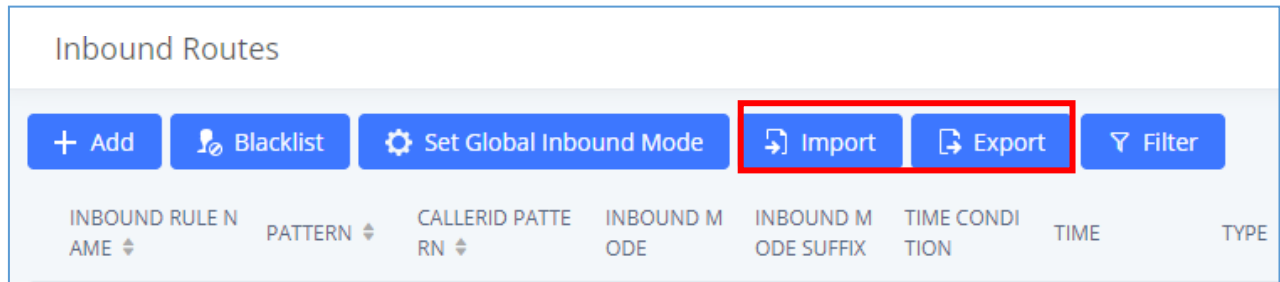

Figure 103: Import/Export Inbound Route

The imported file should be on CSV format and using UTF-8 encoding, the imported file should contain below columns, and each column should be separated by a comma (It is recommended to use Notepad++ for the imported file creation):

- Disable This Route: Yes/No.
- Pattern: Always prefixed with _
- CallerID Pattern: Always prefixed with _
- Prepend Trunk Name: Yes/No.
- Prepend User Defined Name Enable: Yes/No.
- Prepend User Defined Name: A string.
- Alert-info: None, Ring 1, Ring 2... User should enter an Alert-info string following the values we have in the Inbound route Alert-Info list.
- Allowed to seamless transfer: [Extension_number]
- Inbound Multiple Mode: Yes/No.
- Default Destination: By DID, Extension, Voicemail... User should enter a Default Destination string following the values we have in the Inbound route Default Destination list.
- Destination: An Extension number, Ring Group Extension...
- Default Time Condition.
- Mode 1: By DID, Extension, Voicemail... User should enter a Default Destination string following the values we have in the mode 1 Default Destination list.
- Mode 1 Destination: An Extension number, Ring Group Extension...
- Mode 1 Time Condition.

FAX with Two Media

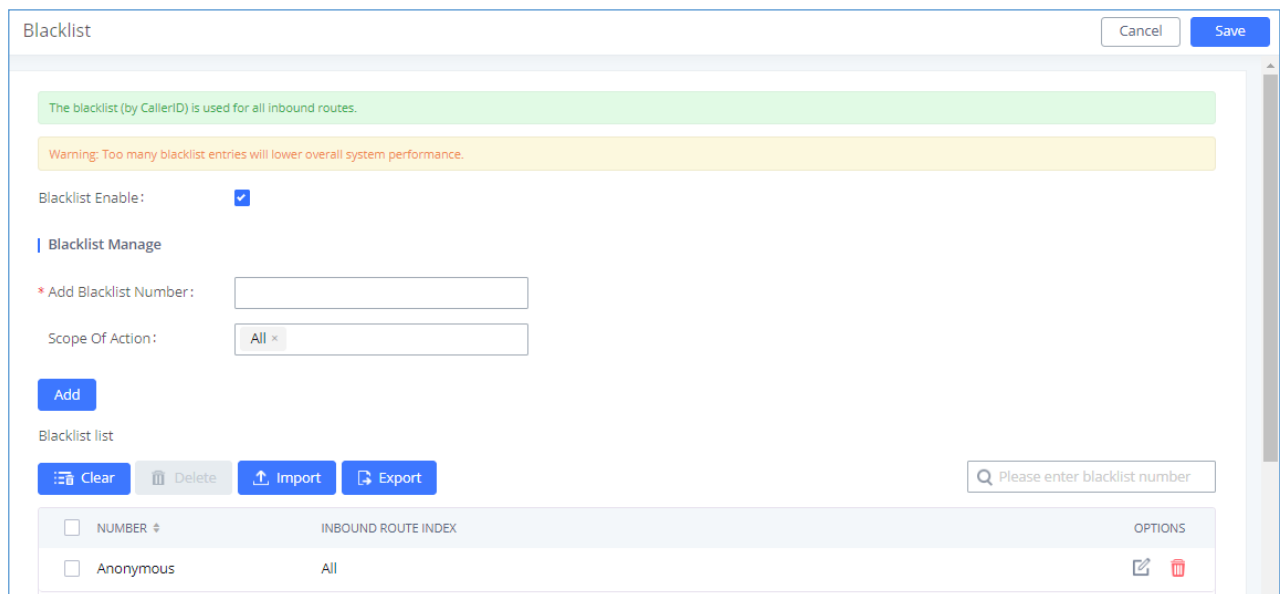

The FCM630A supports Fax re-INVITE with multiple codec negotiation. If a Fax re-INVITE contains both T.38 and PCMA/PCMU codec, FCM630A will choose T.38 codec over PCMA/PCMU.

Blacklist Configurations

In the FCM630A, Blacklist is supported for all inbound routes. Users could enable the Blacklist feature and manage the Blacklist by clicking on "Blacklist".

- Select the checkbox for "Blacklist Enable" to turn on Blacklist feature for all inbound routes. Blacklist is disabled by default.
- Enter a number in "Add Blacklist Number" field and then click "Add" to add to the list. Anonymous can also be added as a Blacklist Number by typing "Anonymous" in Add Blacklist Number field.
- To remove a number from the Blacklist, select the number in "Blacklist list" and click on  or click on "Clear" button to remove all the numbers on the blacklist.
- User can also export the inbound route blacklist by pressing on  button.

Blacklist

The blacklist (by CallerID) is used for all inbound routes.

Warning: Too many blacklist entries will lower overall system performance.

Figure 105: Blacklist csv File

Note:

Users could also add a number to the Blacklist or remove a number from the Blacklist by dialing the feature code for "Blacklist Add" (default: *40) and "Blacklist Remove" (default: *41) from an extension. The feature code can be configured under Web GUI→Call Features→Feature Codes.

FAX SERVER

The FCM630A series supports T.30/T.38 Fax and Fax Pass-through. It can convert the received Fax to PDF format and send it to the configured Email address. Fax/T.38 settings can be accessed via Web GUI→Call Features→FAX/T.38. The list of received Fax files will be displayed in the same web page for users to view, retrieve and delete.

Configure Fax/T.38

- Click on "Create New Fax Extension". In the popped-up window, fill the extension, name and Email address to send the received Fax to.
- Click on "**Fax Settings**" to configure the Fax parameters.
- Click on  to edit the Fax extension.
- Click on  to delete the Fax extension.

Fax Settings

- Enable Error Correction Mode:
- Maximum Transfer Rate:
- Minimum Transfer Rate:
- Max Concurrent Sending Fax:
- Fax Queue Length:
- User Information in Fax Header:

- Default Email Address: [Email Template](#)
- Send PDF Files Only:
- Enable Fax Resend:
- Max Resend Attempts:
- Fax Resend Frequency:

Figure 106: Fax Settings

Table 59: FAX/T.38 Settings

Enable Error Correction Mode	Configure to enable Error Correction Mode (ECM) for the Fax. The default setting is "Yes".
Maximum TransferRate	Configure the maximum transfer rate during the Fax rate negotiation. The possible values are 2400, 4800, 7200, 9600, 12000 and 14400. The default setting is 14400.
Minimum Transfer Rate	Configure the minimum transfer rate during the Fax rate negotiation. The possible values are 2400, 4800, 7200, 9600, 12000 and 14000. The default setting is 2400.

<p>Max Concurrent Sending Fax</p>	<p>Configure the concurrent fax that can be sent by FCM630A. Two modes “Only” and “More” are supported.</p> <ul style="list-style-type: none"> • Only Under this mode, the FCM630A allows only single user to send fax at a time. • More Under this mode, the FCM630A supports multiple concurrent fax sending by the users. By default, this option is set to “only”.
<p>Fax Queue Length</p>	<p>Configure the maximum length of Fax Queue from 6 to 10. The default setting is 6.</p>
<p>User Information in Fax Header</p>	<p>If enabled this this will give users the option to send a special header in SIP fax messages.</p>
<p>Fax Header Information</p>	<p>Adds fax header into the fax file.</p>
<p>Default Email Address</p>	<p>Configure the Email address to send the received Fax to if user's Email address cannot be found.</p> <p style="text-align: center;">Note:</p> <p>The extension's Email address or the Fax's default Email address needs to be configured in order to receive Fax from Email. If neither of them is configured, Fax will not be received from Email.</p>
<p>Template Variables</p>	<p>Fill in the "Subject:" and "Message:" content, to be used in the Email when sending the Fax to the users.</p> <p>The template variables are:</p> <ul style="list-style-type: none"> • <code> \${CALLERIDNUM} </code>: Caller ID Number • <code> \${CALLERIDNAME} </code>: Caller ID Name • <code> \${RECEIVEEXTEN} </code>: The extension to receive the Fax

	<ul style="list-style-type: none"> • <code>#{FAXPAGES}</code> : Number of pages in the Fax • <code>#{VM_DATE}</code> : The date and time when the Fax is received
Send PDF Files Only	If enabled, fax emails will no longer attach TIFF files. Only PDF files will be attached.
Enable Fax Resend	Enables the fax resend option which allow the FCM to keep attempting to send faxes up to a specified amount of times. Additionally, if a fax still fails to send, a <i>Resend</i> button will appear in the File Send Progress list in <i>Value-Added Features</i> → <i>Fax Sending</i> to allow manual resending.
Max Resend Attempts	Configures the maximum attempts number to resend the fax. Default value is set to 5.
Fax Resend Frequency	Configures the Fax Resend Frequency. Default value is set to 50.

Receiving Fax

Example Configuration for Fax-To-Email

The following instructions describe a sample configuration on how to use Fax-to-Email feature on the FCM630A.

1. Connect the PSTN line to the Analog gateway Port.
2. Go to FCM630A Web GUI→**Call Features**→**Fax/T.38** page. Create a new Fax extension.

Create New Fax Extension

* Extension:

* Name:

* Email Address: ⊖

[Add Email Address](#) ⊕

Figure 107: Create Fax Extension

3. Go to FCM630A Web GUI→**Extension/Trunk**→**VoIP Trunks** page. Create a new SIP trunk with the Analog gateway.
4. Go to FCM630A Web GUI→**Extension/Trunk**→**Inbound Routes** page. Create a new inbound route and set the default destination to the Fax extension.

Create New Inbound Rule Cancel Save

* Trunks: Inbound Route Name:

* Pattern:

Disable This Route:

Alert-info: CallerID Pattern:

Fax Detection: Seamless Transfer Whitelist:

Block Collect Calls: Ringback Tone:

Set CallerID Info: Auto Record:

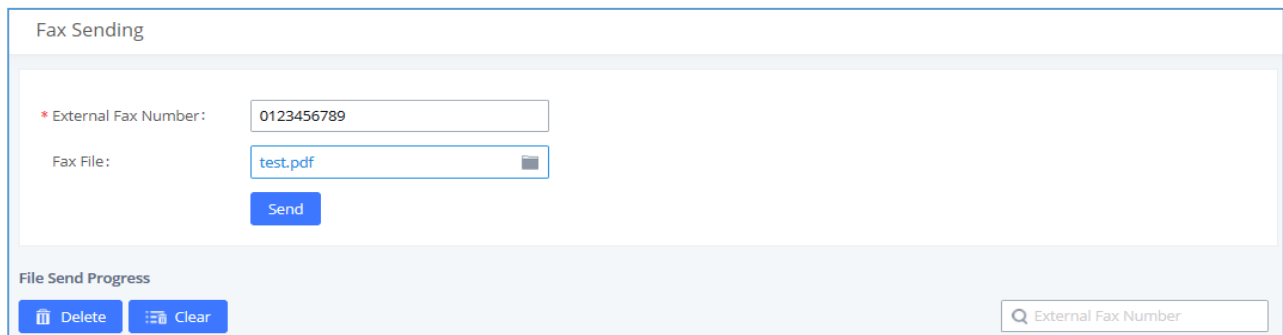

Figure 109: List of Fax Files

FAX Sending FCM630A

Besides the support of Fax machines, The supports also sending Fax via Web GUI access. This feature can be found on Web GUI→**Value-added Features**→**Fax Sending** page. To send fax, pre-setup for sip trunk and outbound route is required. Please refer to **[VOIP TRUNKS]** and **[Outbound Routes]** sections for configuring VoIP trunk and outbound route.

After making VoIP Trunk is setup properly and FCM630A can reach out to PSTN numbers via the trunk, on Fax Sending page, enter the fax number and upload the file to be faxed. Then click on “Send” to start. The progress of sending fax will be displayed in Web GUI. Users can also view the sending history in the same web page.

The screenshot shows a web interface titled "Fax Sending". It contains two input fields: "External Fax Number" with the value "0123456789" and "Fax File" with the value "test.pdf". A blue "Send" button is positioned below the "Fax File" field. At the bottom of the interface, there is a "File Send Progress" section with "Delete" and "Clear" buttons, and a search bar labeled "External Fax Number".

Figure 110: Fax Sending in Web GUI

After that you can see the ongoing sending operation on the progress bar.

Figure 111: Fax Send Progress

Note: Only A3, A4, and B4 paper sizes are supported for the Fax Sending.

MEETING

With the FCM you can easily create, schedule, manage, and join meeting calls, from your IP phone or Softphone. FCM conferencing must be enabled by the administrator for the concerned extensions. The meeting configurations can be accessed under Web GUI→Call Features→Meeting. In this page, users could enable, set the Basic setting, create, edit, view, manage, delete meeting rooms, and edit the Meeting Schedule.

Below are the FCM meeting specifications supported:

FCM63xA	Number of meeting room	Participant limit
FCM630A	3	50

Room

- Click on "Add" to add a new meeting room.
- Click on  to edit the meeting room.
- Click on  to delete the meeting room.

Table 60: Meeting room Configuration Parameters

Extension	Configure the meeting number for the users to dial into the meeting. Note: Up to 64 characters.
------------------	---

Password	<p>When configured, the users who would like to join the meeting call must enter this password before accessing the meeting room.</p> <p style="text-align: center;">Note:</p> <ul style="list-style-type: none"> • Only digits are allowed. • The password has to be at least 4 characters. All repetitive and sequential digits (e.g., 0000, 1111, 1234 and 2345) or common digits (e.g., 111222 and 321321) are not allowed.
Host Password	Configure the Host password.
Privilege	Please select the permission level for outgoing calls.
Allow User Invite	If enabled, participants can invite other users to the meeting.

Meeting Settings contains the following options:

Table 61: Meeting Settings

Enable Talk detection	If enabled, the AMI will send the corresponding event when a user starts or ends talking.
DSP Talking Threshold	The time in milliseconds of sound above what the dsp has established as base line silence for a user before a user is considered to be talking. This value affects several operations and should not be changed unless the impact on call quality is fully understood, the default value is 200.
DSP Silence Threshold	The time in milliseconds of sound falling within the dsp has established as base line silence before a user is considered to be silent. This value affects several operations and should not be changed unless the impact on call quality is fully understood, the default value is 2500.
Audio Codec Preference	Configures the preferred codecs for temporary accounts such as meeting participants who joined via link.
Jitter Buffer	Select jitter buffer method for temporary accounts such as meeting

	<p>participants who joined via link.</p> <p>Disable: Jitter buffer will not be used.</p> <p>Fixed: Jitter buffer with a fixed size (equal to the value of "Jitter BufferSize")</p> <p>Adaptive: Jitter buffer with an adaptive size that will not exceed the value of "Max Jitter Buffer").</p>
--	--

Meeting Schedule

Meeting Schedule can be found under FCM **Web GUI** → **Call Features** → **Meeting** → **Meeting Schedule**. Users can create, edit, view, and delete a Meeting Schedule.

- Click on “Add” to add a new Meeting Schedule.
- Click on the scheduled meeting to edit or delete the event.

Table 62: Meeting Schedule Parameters

Schedule Options	
Meeting Subject	Configure the name of the scheduled meeting. Letters, digits, _ and - are allowed.
Meeting Room	Select a meeting room for this scheduled meeting.
Password	Configure Meeting login password.
Time	Set the beginning date and duration of this scheduled meeting. Please be aware to avoid time conflicts in the same meeting room.
Time Zone	Configure the time zone
Host	Configure the meeting's host Note: FCM extension and remote extension can be selected.
Host password	Configure the meeting's host password

Repeat	Choose when to repeat a scheduled meeting.
Email Reminder (m)	Email reminders will be sent out x minutes prior to the start of the meeting. Valid range is 5-1440. 60 is the default value. 0 indicates not to send out email reminders for the meeting. Note: After editing the time of a single recurrence of a scheduled meeting, a cancelation email will now be sent out followed by a meeting update email.
Allow User Invite	If enabled, participants can invite other users to the meeting.
Call Participants	If enabled, invited participants will be called when the meeting starts.
Invitees	Select the participants to invite to the meeting. Enter either extension numbers or email addresses.
Description	Set a description of scheduled meeting.

Once created, at the scheduled meeting time, FCM630A will send INVITE to the extensions that have been selected for meeting.

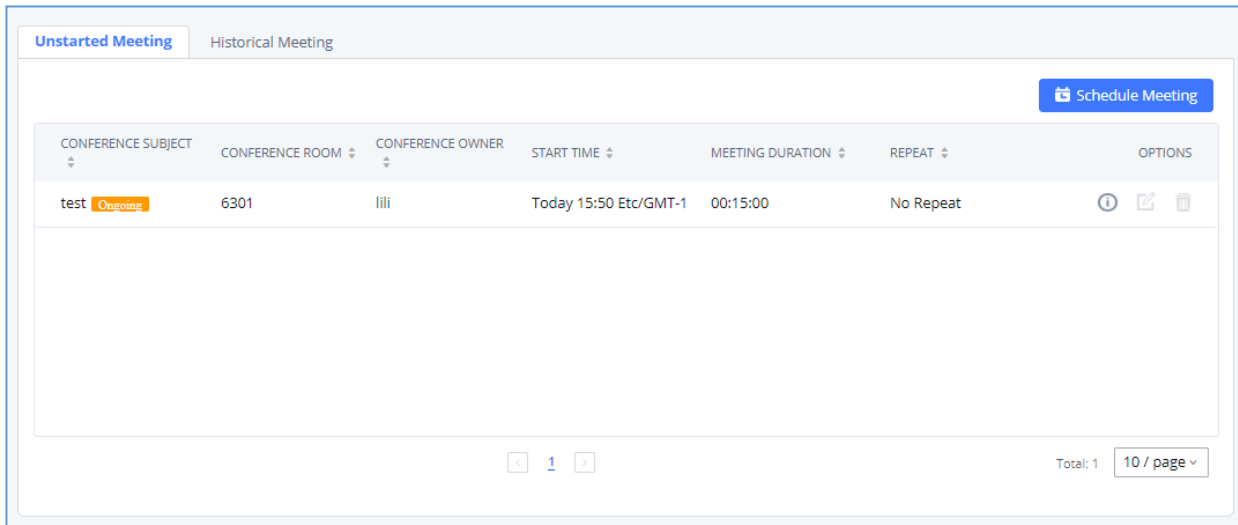

Figure 112: Meeting Schedule

Once the meeting starts, it will be displayed under Unstarted Meeting with an “Ongoing” status, as displayed below.

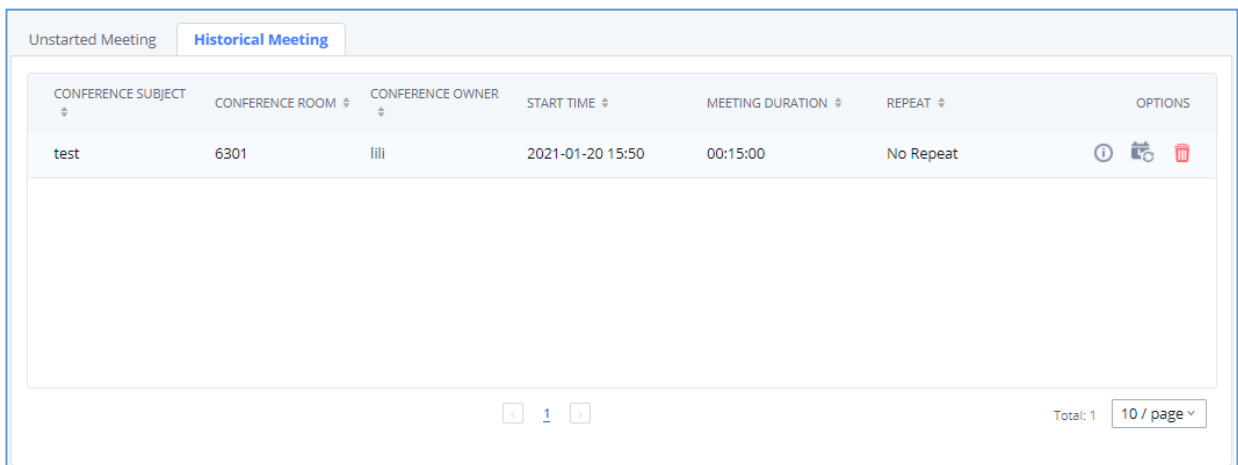

The screenshot shows a web interface with two tabs: 'Unstarted Meeting' (active) and 'Historical Meeting'. A blue 'Schedule Meeting' button is in the top right. Below is a table with columns: CONFERENCE SUBJECT, CONFERENCE ROOM, CONFERENCE OWNER, START TIME, MEETING DURATION, REPEAT, and OPTIONS. One row is visible with the following data: 'test' (with an 'Ongoing' status tag), '6301', 'lili', 'Today 15:50 Etc/GMT-1', '00:15:00', 'No Repeat', and three icons (info, edit, delete). At the bottom, there are navigation arrows, a page number '1', and a 'Total: 1' indicator with a '10 / page' dropdown.

CONFERENCE SUBJECT	CONFERENCE ROOM	CONFERENCE OWNER	START TIME	MEETING DURATION	REPEAT	OPTIONS
test Ongoing	6301	lili	Today 15:50 Etc/GMT-1	00:15:00	No Repeat	

Figure 113: Meeting Scheduled-Ongoing

Once the meeting is finished, the meeting will be displayed under Historical meeting as below:

The screenshot shows the same web interface but with the 'Historical Meeting' tab active. The table now shows a completed meeting with the following data: 'test', '6301', 'lili', '2021-01-20 15:50', '00:15:00', 'No Repeat', and three icons (info, edit, delete). The bottom navigation and pagination elements are identical to the previous screenshot.

CONFERENCE SUBJECT	CONFERENCE ROOM	CONFERENCE OWNER	START TIME	MEETING DURATION	REPEAT	OPTIONS
test	6301	lili	2021-01-20 15:50	00:15:00	No Repeat	

Figure 114: Meeting Scheduled-Completed

In addition, once the meeting ends, the system will send a meeting report email to the host including PDF file where he/she can view the meeting, participant information, device type and trend graph of participant levels

Meeting Recordings

The FCM630A allows users to record the meeting call and retrieve the recording from Web GUI→**Call Features**→ **Meeting**→**Meeting Recordings**.

To record the meeting call, when the meeting room is in idle, enable "Record Meeting" from the meeting room configuration dialog. Save the setting and apply the change. When the meeting call starts, the call will be automatically recorded in .wav format.

The recording files will be listed as below once available. Users could click on  to download the recording or

click on  to delete the recording. Users could also delete all recording files by clicking on "Delete All

Recording Files" or delete multiple recording files at once by clicking on "Delete" after selecting the recording files.

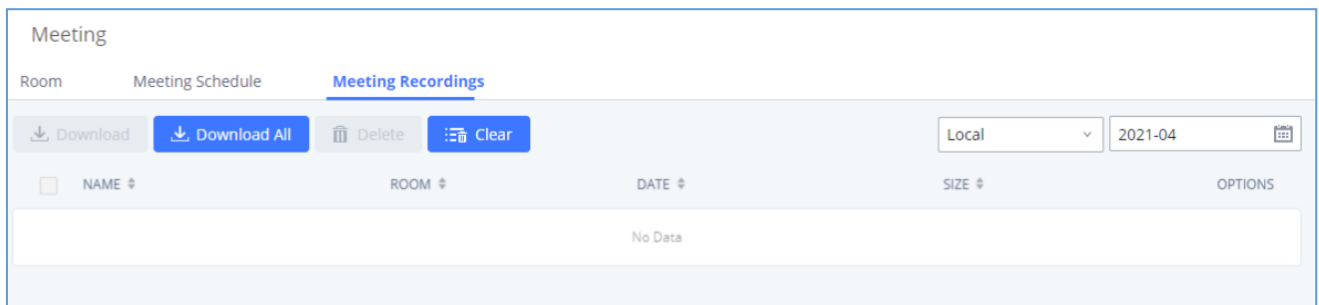

Figure 115: Meeting Recordings

IVR

Configure IVR

IVR configurations can be accessed under the FCM630A Web GUI→**Call Features**→**IVR**. Users could create,edit, view, and delete an IVR.

- Click on "Add" to add a new IVR.
- Click on  to edit the IVR configuration.
- Click on  to delete the IVR.

Figure 116: Create New IVR

Table 63: IVR Configuration Parameters

Basic Settings	
Name	Configure the name of the IVR. Letters, digits, _ and - are allowed.
Extension	Enter the extension number for users to access the IVR.
Dial Trunk	If enabled, all callers to the IVR can use trunk. The permission must be configured for the users to use the trunk first. The default setting is "No".

Auto Record	If enabled, calls to this IVR will automatically be recorded.
Permission	<p>Assign permission level for outbound calls if "Dial Trunk" is enabled. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level.</p> <p>The default setting is "Internal". If the user tries to dial outbound calls after dialing into the IVR, the FCM630A will compared the IVR's permission level with the outbound route's privilege level.</p> <p>If the IVR's permission level is higher than (or equal to) the outbound route's privilege level, the call will be allowed to go through.</p>
Dial Other Extensions	<p>This controls the destination that can be reached by the external caller via the inbound route. The available destinations are:</p> <ul style="list-style-type: none"> • Extension • Meeting • Call Queue • Ring Group • Paging/Intercom Groups • Voicemail Groups • Dial by Name • All
IVR Black/Whitelist	If enabled only numbers inside of the Whitelist or outside of the Blacklist can be called from IVR.
Internal Black/Whitelist	Contain numbers, either of Blacklist or Whitelist.
External Black/Whitelist	This feature can be used only when Dial Trunk is enabled, it contains external numbers allowed or denied calling from the IVR, the allowed format is the following: Number1, number2, number3...
Replace Display Name	If enabled, the FCM will replace the caller display name with IVR name.

Return to IVR Menu	If enabled and if a call to an extension fails, the caller will be redirected to the IVR menu.
Alert Info	When present in an INVITE request, the alert-Info header field specifies an alternative ring tone to the UAS.
Prompt	Select an audio file to play as the welcome prompt for the IVR. Click on "Prompt" to add additional audio file under Web GUI→ PBX Settings → Voice Prompt → Custom Prompt .
Digit Timeout	Configure the timeout between digit entries. After the user enters a digit, the user needs to enter the next digit within the timeout. If no digit is detected within the timeout, the FCM630A will consider the entries complete. The default timeout is 3s.
Response Timeout	After playing the prompts in the IVR, the FCM630A will wait for the DTMF entry within the timeout (in seconds). If no DTMF entry is detected within the timeout, a timeout prompt will be played. The default setting is 10 seconds.
Response Timeout Prompt	Select the prompt message to be played when timeout occurs.
Invalid Input Prompt	Select the prompt message to be played when an invalid extension is pressed.
Response Timeout Prompt Repeats	Configure the number of times to repeat the prompt if no DTMF input is detected. When the loop ends, it will go to the timeout destination if configured, or hang up. The default setting is 3.
Invalid Input Prompt Repeats	Configure the number of times to repeat the prompt if the DTMF input is invalid. When the loop ends, it will go to the invalid destination if configured, or hang up. The default setting is 3.
Language	Select the voice prompt language to be used for this IVR. The default setting is "Default" which is the selected voice prompt language under Web GUI→ PBX Settings → Voice Prompt → Language Settings . The dropdown list shows all the current available voice prompt languages on the FCM630A. To add more languages in the list, please download voice prompt package by selecting "Check Prompt List" under Web GUI→ PBX Settings → Voice Prompt → Language Settings .

Black/White List in IVR

In some scenarios, the IPPBX administrator needs to restrict the extensions that can be reached from IVR. For example, the company CEO and directors prefer only receiving calls transferred by the secretary, some special extensions are used on IP surveillance end points which should not be reached from external calls via IVR for privacy reason. FCM has now added blacklist and whitelist in IVR settings for users to manage this.

Note: up to 250 extensions are allowed on the back/whitelist.

To use this feature, log in FCM Web GUI and navigate to Call Features→IVR→Create/Edit IVR: IVR Black/Whitelist.

- If the user selects “Blacklist Enable” and adds extension in the list, the extensions in the list will not be allowed to be reached via IVR.

- If the user selects “Whitelist Enable” and adds extension in the list, only the extensions in the list can be allowed to be reached via IVR.

The screenshot displays the 'Create New IVR' configuration interface. Under the 'Basic Settings' tab, the 'IVR Black/Whitelist' section is highlighted with a red border. This section includes a dropdown menu set to 'Blacklist Enable'. Below this, there are two lists: 'Internal Black/Whitelist' showing 28 items available (extensions 1000, 1003, 1004, 1005, 1006) and a 'Selected' list with 2 items (extensions 1001, 1002). At the bottom of this section, the 'External Blacklist/Whitelist' field contains the number 0625314578.

Figure 118: Black/Whitelist

Create Custom Prompt

To record new IVR prompt or upload IVR prompt to be used in IVR, click on “Upload Audio File” next to the “Welcome Prompt” option and the users will be redirected to Custom Prompt page. Or users could go to Web GUI→PBX Settings→Voice Prompt→Custom Prompt page directly.

Alert-info: ▾

* Prompt: ▾ [Upload Audio File](#)

[Add Prompt](#) 

Figure 119: Click on Prompt to Create IVR Prompt

Once the IVR prompt file is successfully added to the FCM630A, it will be added into the prompt list options for users to select in different IVR scenarios.

LANGUAGE SETTINGS FOR VOICE PROMPT

The FCM630A supports multiple languages in Web GUI as well as system voice prompt. Currently, there are 16 languages supported in system voice prompt: **English (United States), Arabic, Chinese, Dutch, English (United Kingdom), French, German, Greek, Hebrew, Italian, Polish, Portuguese, Russian, Spanish, Catalan, Swedish and Turkish.**

English (United States) and Chinese voice prompts are built in with the FCM630A already. The other languages provided by FIBERME can be downloaded and installed from the FCM630A Web GUI directly. Additionally, users could customize their own voice prompts, package them and upload to the FCM630A.

Language settings for voice prompt can be accessed under Web GUI→**PBX Settings**→**Voice Prompt**→**Language Settings**.

Download and Install Voice Prompt Package

To download and install voice prompt package in different languages from FCM630A Web GUI, click on "Add Voice Prompt Package" button.

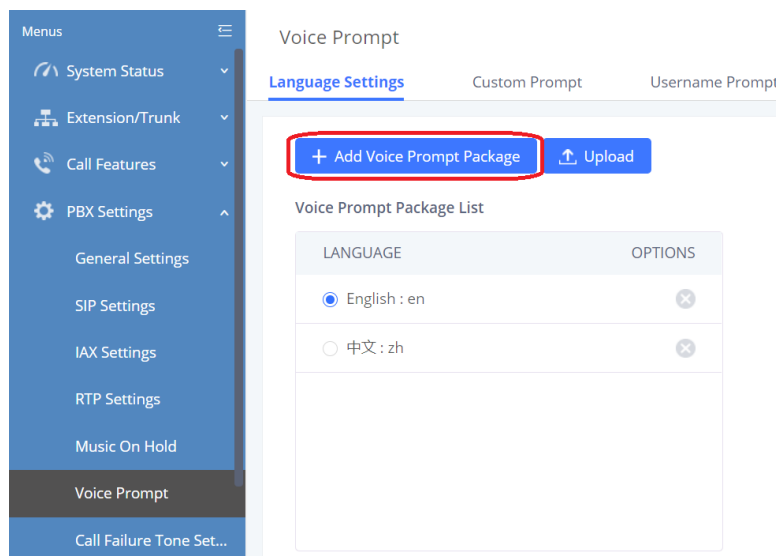

Figure 120: Language Settings for Voice Prompt

A new dialog window of voice prompt package list will be displayed. Users can see the version number (latest version available V.S. current installed version), package size and options to upgrade or download the language.

VOICE PROMPT PACKAGE LIST	VERSION (REMOTE / LOCAL)	SIZE	OPTIONS
British English	1.9/-	4.2M	↓
Deutsch	1.8/-	4.2M	↓
English	1.11/1.8	6.0M	⬆
Español	1.10/-	4.4M	↓
Español(Català)	1.8/-	3.1M	↓
Español(Español)	1.8/-	4.2M	↓
Ελληνικά	1.8/-	4.4M	↓
Français	1.8/-	4.1M	↓
Italiano	1.8/-	4.0M	↓

Figure 121: Voice Prompt Package List

Click on  to download the language to the FCM630A. The installation will be automatically started once the downloading is finished.

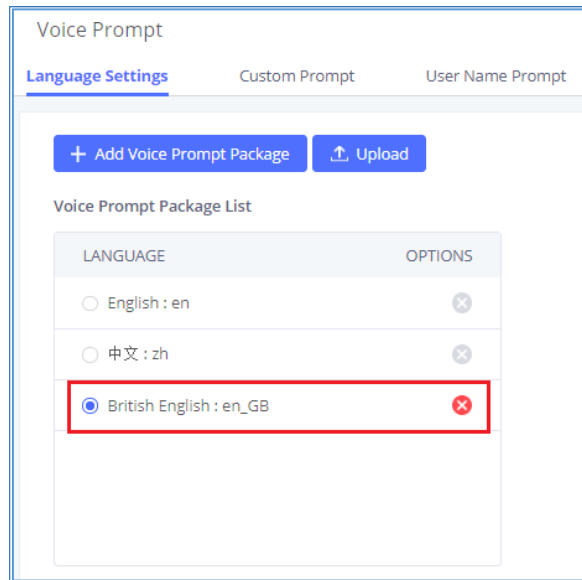

Figure 122: New Voice Prompt Language Added

A new language option will be displayed after successfully installed. Users then could select it to apply in the FCM630A system voice prompt or delete it from the FCM630A.

Customize Specific Prompt

On the FCM630A, if the user needs to replace some specific customized prompt, the user can upload a single specific customized prompt from Web GUI→**PBX Settings**→**Voice Prompt**→**Language Settings** and click on“**Upload**” instead of the entire language pack.

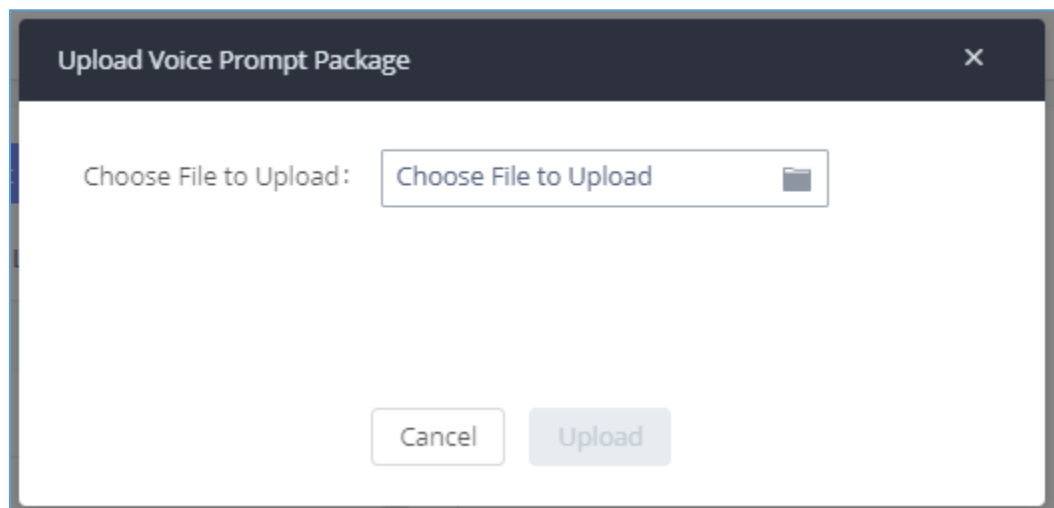

Figure 123: Upload Single Voice Prompt for Entire Language Pack

Username Prompt Customization

There are two ways to customize/set new username prompt:

Upload Username Prompt File from Web GUI

1. First, Users should have a pre-recorded file respecting the following format:
 - PCM encoded / 16 bits / 8000Hz mono.
 - In .tar/.tar.gz/.tgz format
 - File size under 30M.
 - Filename must be set as the extension number with 18 characters max. For example, the recordedfile name 1000.wav will be used for extension 1000.

2. Go under web GUI **PBX Settings** → **Voice Prompt** → **Username button**.
3. Select the recorded file to upload it and press Save and Apply Settings.
 - Click on  to record again the username prompt.
 - Click on to play recorded username prompt.
 - Select username prompts and press  to delete specific file or select multiple files for deletion using the button "**Delete**".

Record Username via Voicemail Menu

The second option to record username is using voicemail menu, please follow below steps:

- Dial *98 to access the voicemail
- After entering the desired extension and voicemail password, dial "0" to enter the recordings menu and then "3" to record a name.

Another option is that each user can record their own name by following below steps:

- The user dials *97 to access his/her voicemail
- After entering the voicemail password, the user can press "0" to enter the recordings menu and then "3" to record his name.

VOICEMAIL

Configure Voicemail

If the voicemail is enabled for FCM630A extensions, the configurations of the voicemail can be globally set up and managed under Web GUI → **Call Features** → **Voicemail**.

* Max Greeting Time (s):	<input type="text" value="60"/>
Dial "0" for Operator:	<input type="checkbox"/>

Figure 124: Voicemail Settings

Table 64: Voicemail Settings

Max Greeting Time (s)	Configure the maximum number of seconds for the voicemail greeting. The default setting is 60 seconds.
Dial '0' For Operator	If enabled, the caller can press 0 to exit the voicemail application and connect to the configured operator's extension.

Operator Type	Configure the operator type; either an extension or a ring group.
Operator Extension	Select the operator extension, which will be dialed when users press 0 to exit voicemail application. The operator extension can also be used in IVR.
Max Messages Per Folder	Configure the maximum number of messages per folder in users' voicemail. The valid range 10 to 1000. The default setting is 50.
Max Message Time	<p>Select the maximum duration of the voicemail message. The message will not be recorded if the duration exceeds the max message time. The default setting is 15 minutes. The available options are:</p> <ul style="list-style-type: none"> • 1 minute • 2 minutes • 5 minutes • 15 minutes • 30 minutes • Unlimited
Min Effective Message Time	<p>Configure the minimum duration (in seconds) of a voicemail message. Messages will be automatically deleted if the duration is shorter than the Min Message Time. The default setting is 3 seconds. The available options are:</p> <ul style="list-style-type: none"> • No minimum • 1 second • 2 seconds • 3 seconds • 4 seconds • 5 seconds <p>Note: Silence and noise duration are not counted in message time.</p>
Announce Message Caller-ID	If enabled, the caller ID of the user who has left the message will be announced at the beginning of the voicemail message. The default setting is "No".

Announce Message Duration	If enabled, the message duration will be announced at the beginning of the voicemail message. The default setting is "No".
Play Envelope	If enabled, a brief introduction (received time, received from, and etc.) of each message will be played when accessed from the voicemail application. The default setting is "Yes".
Play Most Recent First	If enabled, it will play the most recent message first.
Allow User Review	If enabled, users can review the message following the IVR before sending.
Voicemail Remote Access	<p>If enabled, external callers routed by DID and reaching VM will be prompted by the FCM with 2 options:</p> <ul style="list-style-type: none"> • Press 1 to leave a message. <p>To leave a message for the extension reached by DID.</p> <ul style="list-style-type: none"> • Press 2 to access voicemail management system. <p>This will allow caller to access any extension VM after entering extension number and its VM password.</p> <p>Note: This option applies to inbound call routed by DID only.</p> <p>The default setting is "Disabled".</p>
Forward Voicemail to Peered FCMs	<p>Enables the forwarding of voicemail to remote extensions on peered SIP trunks.</p> <p>The default setting is "Disabled".</p>
Voicemail Password	Configures the default voicemail password that will be used when an extension is reset.
Format	Warning: WAV files take up significantly more storage space than GSM files.

Note: Resetting an extension will reset Voicemail Password, Send Voicemail to Email, and Keep Voicemail afterEmailing values to default. Previous custom voicemail prompts and messages will be deleted.

Access Voicemail

If the voicemail is enabled for FCM630A extensions, the users can dial the voicemail access number (by default

*97) to access their extension's voicemail. The users will be prompted to enter the voicemail password and then can enter digits from the phone keypad to navigate in the IVR menu for different options.

Otherwise the user can dial the voicemail access code (by default *98) followed by the extension number and password in order to access to that specific extension's voicemail.

Table 65: Voicemail IVR Menu

5 - Change your password		
* - Return to the main menu		

Leaving Voicemail

If an extension has voicemail enabled under basic settings “Extension/Trunk → Extensions → Basic Settings” and after a ring timeout or user not available, the caller will be automatically redirected to the voicemail in order to leave a message on which case they can press # in order to submit the message.

In case if the caller is calling from an internal extension, they will be directly forwarded to the extension's

voicemail box. But if the caller is calling from outside the system and the incoming call is routed by DID to the destination extension, then the caller will be prompted with the choice to either press 1 to access voicemail management or press 2 to leave a message for the called extension. This feature could be useful for remote voicemail administration.

Voicemail Email Settings

The FCM630A can be configured to send the voicemail as attachment to Email. Click on "Voicemail Email Settings" button to configure the Email attributes and content.

Table 66: Voicemail Email Settings

Send Voicemail to Email	If enabled, voicemail will be sent to the user's email address. Note: SMTP server must be configured to use this option.
Keep Voicemail after Emailing	Enable this option if you want to keep recording files after the Email is sent. The default setting is Enable.
Email Template	<p>Fill in the "Subject:" and "Message:" content, to be used in the Email when sending to the user.</p> <p>The template variables are:</p> <ul style="list-style-type: none"> • \t: TAB • \${VM_NAME}: Recipient's first name and last name • \${VM_DUR}: The duration of the voicemail message <ul style="list-style-type: none"> • \${VM_MAILBOX}: The recipient's extension • \${VM_CALLERID}: The caller ID of the person who has left the message <ul style="list-style-type: none"> • \${VM_MSGNUM}: The number of messages in the mailbox • \${VM_DATE}: The date and time when the message is left

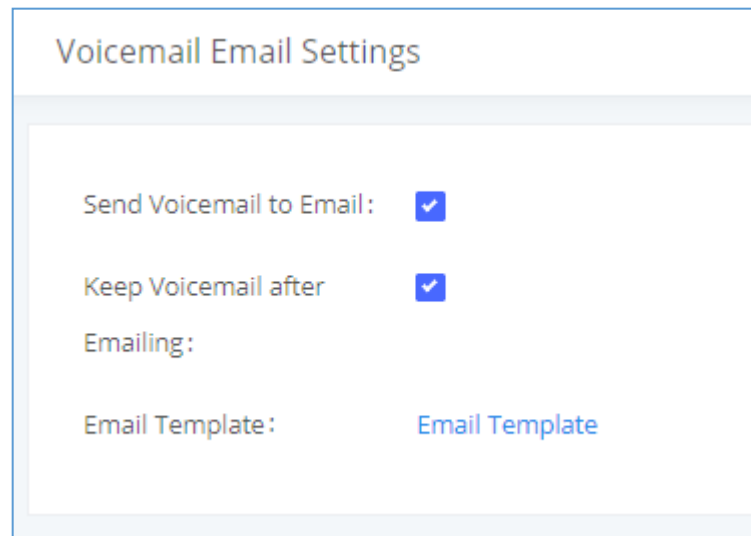

Figure 125: Voicemail Email Settings

Click on "Email Template" button to view the default template as an example.

Configure Voicemail Group

The FCM630A supports voicemail group and all the extensions added in the group will receive the voicemail to the group extension. The voicemail group can be configured under Web GUI → Call Features → Voicemail → Voicemail Group. Click on "Add" to configure the group.

Table 67: Voicemail Group Settings

Extension	Enter the Voicemail Group Extension. The voicemail messages left to this extension will be forwarded to all the voicemail group members.
Name	Configure the Name to identify the voicemail group. Letters, digits, _ and - are allowed.
Voicemail Password	Configure the voicemail password for the users to check voicemail messages.
Email Address	Configure the Email address for the voicemail group extension.
Member	Select available mailboxes from the left list and add them to the right list. The extensions need to have voicemail enabled to be listed in available mailboxes list.

RING GROUP

The FCM630A supports ring group feature with different ring strategies applied to the ring group members. This section describes the ring group configuration on the FCM630A.

Configure Ring Group

Ring group settings can be accessed via Web GUI → **Call Features** → **Ring Group**.

Figure 127: Ring Group

- Click on  to add ring group.
- Click on  to edit the ring group. The following table shows the ring group configuration parameters.
- Click on  to delete the ring group.

Table 68: Ring Group Parameters

Ring Group Name	Configure ring group name to identify the ring group. Letters, digits, _ and –are allowed.
Extension	Configure the ring group extension.
Members	Select available users from the left side to the ring group member list on the right side. Click on   to arrange the order.

LDAP Phonebook	Select available remote users from the left side to the ring group member list on the right side. Click on   to arrange the order. Note: LDAP Sync must be enabled first.
Ring Strategy	<p>Select the ring strategy. The default setting is “Ring in order”.</p> <ul style="list-style-type: none"> • Ring simultaneously. Ring all the members at the same time when there is incoming call to the ring group extension. If any of the member answers the call, it will stop ringing. • Ring in order. Ring the members with the order configured in ring group list. If the first member does not answer the call, it will stop ringing the first member and start ringing the second member.
Music On Hold	Select the “Music On Hold” Class of this Ring Group, “Music On Hold” can be managed from the “Music On Hold” panel on the left.
Custom Prompt	<p>This option is to set a custom prompt for a ring group to announce to caller. Click on ‘Prompt’, it will direct the users to upload the customized voice prompts.</p> <p>Note: Users can also refer to the page PBX Settings→Voice Prompt→Custom Prompt, where they could record new prompt or upload prompt files.</p>
Ring Timeout on Each Member	<p>Configure the number of seconds to ring each member. If set to 0, it will keep ringing. The default setting is 60 seconds.</p> <p>Note: The actual ring timeout might be overridden by users if the phone has ring timeout settings as well.</p>
Auto Record	If enabled, calls on this ring group will be automatically recorded. The default setting is No. The recording files can be accessed from Web GUI→CDR→Recording Files.
Endpoint Call	This allows the FCM to work with endpoint-configured call forwarding settings

<p>Forwarding Support</p>	<p>to redirect calls to ring group. For example, if a member wants to receive calls to the ring group on his mobile phone, he will have to set his endpoint's call forwarding settings to his mobile number. By default, it is disabled.</p> <p>However, this feature has the following limitations:</p> <ul style="list-style-type: none"> • This feature will work only when call forwarding is configured on endpoints, not on the FCM. • If the forwarded call goes through an analog trunk, and polarity reversal is disabled, the other ring group members will no longer receive the call after it is forwarded. • If the forwarded call goes through a VoIP trunk, and the outbound route for it is PIN-protected and requires authentication, the other ring group members will no longer receive the call after it is forwarded. • If the forwarded call hits voicemail, the other ring group members will no longer receive the call.
<p>Replace Display Name</p>	<p>If enabled, the FCM will replace the caller display name with the Ring Group name the caller know whether the call is incoming from a direct extension or a Ring Group.</p>
<p>Skip Busy Agent</p>	<p>If enabled, skip busy agents regardless of call waiting settings.</p>
<p>Enable Destination</p>	<p>If enabled, users could select extension, voicemail, ring group, IVR, call queue, voicemail group as the destination if the call to the ring group has no answer. Secret and Email address are required if voicemail is selected as the destination.</p>
<p>Default Destination</p>	<p>The call would be routed to this destination if no one in this ring group answers the call.</p> <p>Note: Users can now set the voicemail of ring groups as routing destinations and IVR key press event destinations and to do so ring group must have their Default Destination set to Voicemail with Ring Group Extensions.</p>

Figure 128: Ring Group Configuration

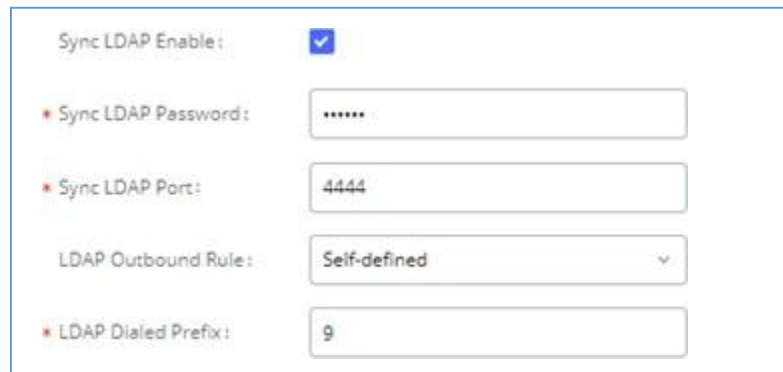

Remote Extension in Ring Group

Remote extensions from the peer trunk of a remote FCM630A can be included in the ring group with localextension. An example of Ring Group with peer extensions is presented in the following:

1. Creating SIP Peer Trunk between both FCM630A _A and FCM630A _B. **SIP Trunk** can be found under Web GUI→**Extension/Trunk**→**VoIP Trunks**. Also, please configure their Inbound/Outbound routes accordingly.

2. Click edit button in the menu  and check if **Sync LDAP Enable** is selected, this option will allow FCM630A _A update remote LDAP server automatically from peer FCM630A _B. In addition, Sync LDAP Password must match for FCM630A _A and FCM630A _B to sync LDAP contact automatically. Port number can be anything between 0~65535, and use the outbound rule created in step 1 for the LDAP Outbound Rule option.

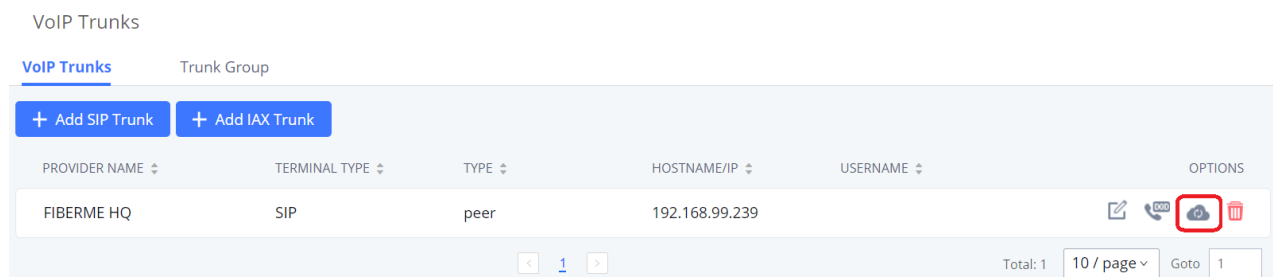

The screenshot shows a configuration form for Sync LDAP Server. The fields are as follows:

- Sync LDAP Enable:
- Sync LDAP Password:
- Sync LDAP Port:
- LDAP Outbound Rule:
- LDAP Dialed Prefix:

Figure 129: Sync LDAP Server option

3. In case if LDAP server does not sync automatically, user can manually sync LDAP server. Under **VoIP Trunks** page, click sync button shown in the following figure to manually sync LDAP contacts from peer FCM630A.

The screenshot shows the VoIP Trunks page. It has a header with "VoIP Trunks" and "Trunk Group". Below the header are two buttons: "+ Add SIP Trunk" and "+ Add IAX Trunk". The main content is a table with the following columns: PROVIDER NAME, TERMINAL TYPE, TYPE, HOSTNAME/IP, USERNAME, and OPTIONS. The table contains one row with the following data:

PROVIDER NAME	TERMINAL TYPE	TYPE	HOSTNAME/IP	USERNAME	OPTIONS
FIBERME HQ	SIP	peer	192.168.99.239		  

At the bottom of the table, there is a pagination control showing "Total: 1" and "10 / page".

Figure 130: Manually Sync LDAP Server

4. Under **Ring Groups** setting page, click "Add". **Ring Groups** can be found under Web GUI→**Call Features**→**Ring Groups**.
5. If LDAP server is synced correctly, **Available LDAP Numbers** box will display available remote extensions that can be included in the current ring group. Please also make sure the extensions in the peer FCM630A can be included into that FCM630A's LDAP contact.

RESTRICT CALLS

Restrict calls is a feature that can be used to restrict calls between internal extensions besides those in the Allowed List.

This section describes the configuration of this feature in the Call Features->Restrict Calls page.

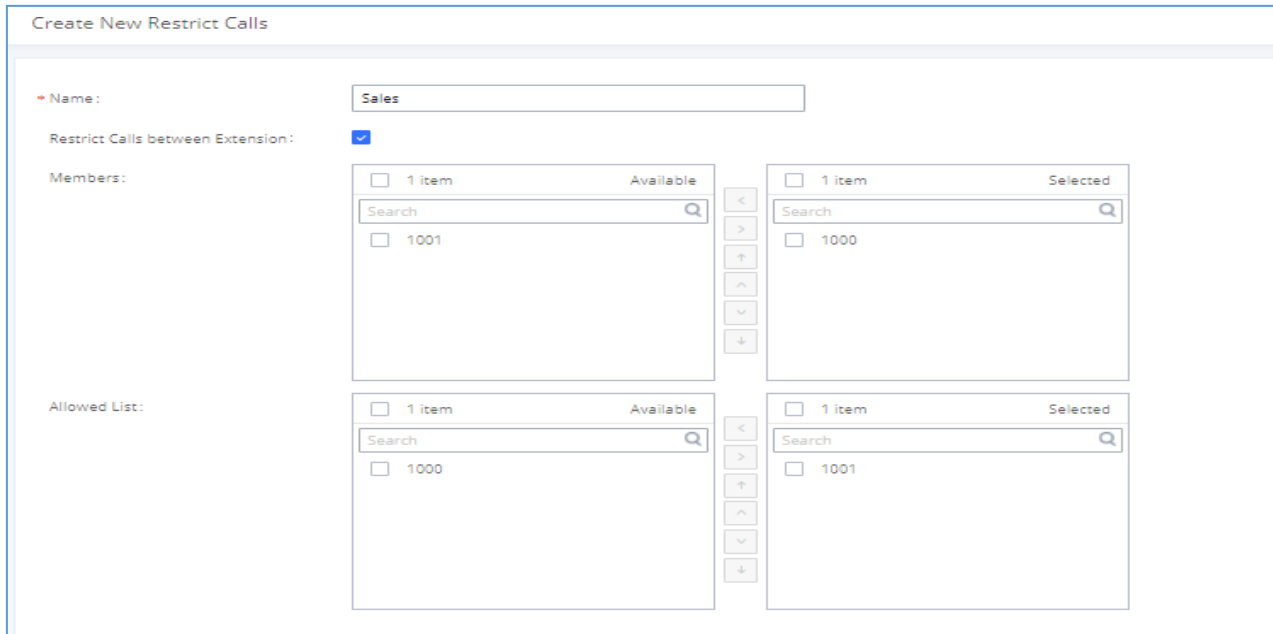

Figure 131: Restrict Calls

Configure Restrict Calls

- Click on "Add" to add a rule for restrict calls.
- Click on  to edit the rule of restrict calls.
- Click on  to delete the rule of restrict calls.

Name	Configure Restrict call's name
Restrict Calls between	When enabled, members of the group cannot dial other extension, only the

extensions	numbers in the Allowed List. Note: It's enabled by default.
Members	Configure the members that will not be able to call any extensions besides those in the Allowed List.
Allowed list	Select the extensions that the Members list can be able to call.

PAGING AND INTERCOM GROUP

Paging and Intercom Group can be used to make an announcement over the speaker on a group of phones. Targeted phones will answer immediately using speaker. The FCM630A paging and intercom can be used via feature code to a single extension or a paging/intercom group. This section describes the configuration of paging/intercom group under Web GUI→Call Features→Paging/Intercom.

Configure Paging/Intercom Group

- Click on "Add" to add paging/intercom group.
- Click on  to edit the paging/intercom group.
- Click on  to delete the paging/intercom group.
- Click on "Paging/Intercom Group Settings" to edit Alert-Info Header. This header will be included in the SIPINVITE message sent to the callee in paging/intercom call.

Configure Multicast Paging

CALL QUEUE

The FCM630A supports call queue by using static agents or dynamic agents. Call Queue system can accept more calls than the available agents. Incoming calls will be held until next representative is available in the system. This section describes the configuration of call queue under Web GUI→Call Features→Call Queue.

Configure Call Queue

Call queue settings can be accessed via Web GUI→**Call Features**→**Call Queue**.

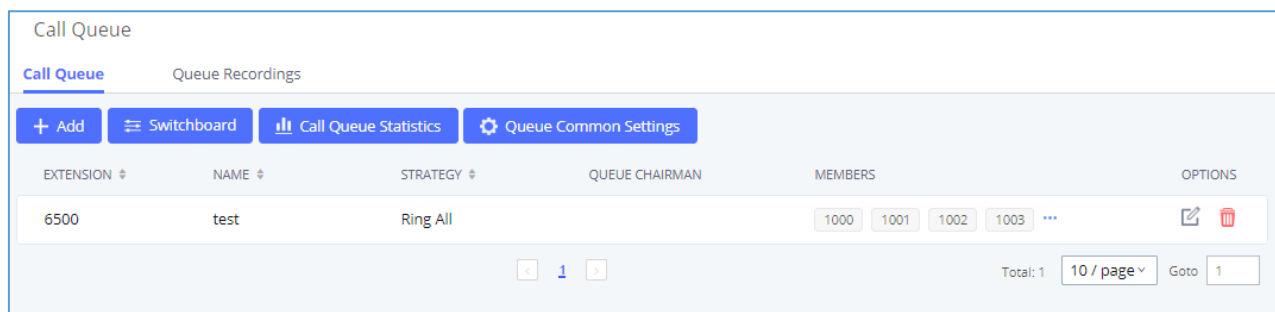

Figure 139: Call Queue

FCM630A supports custom prompt feature in call queue. This custom prompt will active after the caller waits for a period of time in the Queue. Then caller could choose to leave a message/ transfer to default extension or keep waiting in the queue.

To configure this feature, please go to FCM Web GUI→**Call Features**→**Call Queue**→Create New Queue/Edit Queue→Queue Options→set Enable Destination to Enter Destination with Voice Prompt. Users could configure the wait time with Voice Prompt Cycle.

- Click on "Add" to add call queue.
- Click on to edit the call queue. The call queue configuration parameters are listed in the table below.
- Click on to delete the call queue.

Table 74: Call Queue Configuration Parameters

Basic Settings	
Extension	Configure the call queue extension number.
Name	Configure the call queue name to identify the call queue.
Strategy	<p>Select the strategy for the call queue.</p> <ul style="list-style-type: none"> • Ring All Ring all available Agents simultaneously until one answers. • Linear Ring agents in the specified order. • Least Recent Ring the agent who has been called the least recently. • Fewest Calls Ring the agent with the fewest completed calls. • Random Ring a random agent. • Round Robin Ring the agents in Round Robin scheduling with memory. The default setting is "Ring All".
Music On Hold	<p>Select the Music On Hold class for the call queue.</p> <p>Note: Music On Hold classes can be managed from Web GUI→PBX Settings→Music On Hold.</p>
Max Queue Length	Configure the maximum number of calls to be queued at once. This number does not include calls that have been connected with agents. It only includes calls not connected yet. The default setting is 0, which means unlimited. When the maximum value is reached, the caller will be treated with busy tone followed by the next calling rule after attempting to enter the queue.
Wrapup Time	Configure the number of seconds before a new call can ring the queue after the last call on the agent is completed. If set to 0, there will be no delay between calls

	to the queue. The default setting is 10 seconds.
Retry Time	Configure the number of seconds to wait before ringing the next agent.
Ring Time	Configure the number of seconds an agent will ring before the call goes to the next agent. The default setting is 30 seconds.
Auto Record	If enabled, the calls on the call queue will be automatically recorded. The recording files can be accessed in Queue Recordings under Web GUI→ Call Features → Call Queue .
Max Wait Time	Configure the timeout after which users will be disconnected from the call queue. The default setting is "60". 0 means unlimited. Note: It is recommended to configure "Wait Time" longer than the "Wrapup Time".
Welcome Prompt	If enabled, users can upload an audio file that will be played as an Initial tone when dialing the queue number.
Destination	Once Max Wait Time has been configured, select to which destination send the calls that have timed out. The default is to "Hang up" the call.
Destination Prompt Cycle	Configure the voice prompt cycle (in seconds) of the call queue. Once all agents are busy and the voice prompt will be played, and you can press the appropriate key to transfer to failover destination.
Custom Prompt	When playing a custom prompt, press 1 to transfer to failover destination.
Destination	Select failover destination to send callers after pressing 1 upon hearing the custom prompt.
Advanced Settings	
<ul style="list-style-type: none"> - Virtual Queue - Caller Announcement - Queue Chairman 	Refer to Call Center Settings and Enhancements section for detailed information about these features.
Enable Position Announcement	If enabled, the system will inform callers waiting in the queue of their positions in line.

Enable Wait Time Announcement	If enabled, the estimated wait time for the call to get answered will periodically be announced to the caller. Note: Wait time will not be announced if less than one minute.
Announcement Interval	The interval at which caller positions and estimated wait times will be announced.
Enable Agent Login	Enables agent login/logout feature for static agents.
Leave When Empty	<p>Configure whether the callers will be disconnected from the queue or not if the queue has no agent anymore. The default setting is "Strict".</p> <ul style="list-style-type: none"> • Yes Callers will be disconnected from the queue if all agents are paused or invalid. • No Never disconnect the callers from the queue when the queue is empty. • Strict Callers will be disconnected from the queue if all agents are paused, invalid or unavailable.
Dial in Empty Queue	<p>Configure whether the callers can dial into a call queue if the queue has no agent. The default setting is "No".</p> <ul style="list-style-type: none"> • Yes Callers can always dial into a call queue. • No Callers cannot dial into a queue if all agents are paused or invalid. • Strict Callers cannot dial into a queue if the agents are paused, invalid or unavailable.
Failover Destination	Choose the destination where the call will be directed when the queue is empty or when all the agents are not logged in, here are the destinations that can be

	<p>configured:</p> <ul style="list-style-type: none"> • Play Sound. • Extension. • Voicemail. • Queues. • Ring Group. • Voicemail Group. • IVR. • External Number.
Enable Agent Login	Enabling agent login will cause the dynamic agents to be unavailable.
Queue Chairman	The queue chairman can log into his web portal to operate the queue.
Report Hold Time	If enabled, the FCM630A will report (to the agent) the duration of time of the call before the caller is connected to the agent. The default setting is "No".
Replace Display Name	If enabled, the FCM will replace the caller display name with the Call Queue name so that the caller knows the call is incoming from a Call Queue.
Enable Feature Codes	Enable feature codes option for call queue. For example, *83 is used for "Agent Pause"
Autofill	Configure to enable autofill.
Dynamic Login Password	If enabled, the configured PIN number is required for dynamic agent to log in. The default setting is disabled.
Alert-Info	When present in an INVITE request, the Alert-info header field specifies an alternative ring tone to the UAS.
Agents	
Static Agents	Go to "Agents" Tab and Select the available users to be the static agents in the call queue. Choose from the available users on the left to the static agents list on the right. Click on <input type="checkbox"/> <input type="checkbox"/> to choose. And use UP and Down arrow to select the order of the agent within the call queue.

Static Agents limitation:

To guarantee a high level of audio quality with the call queue feature, FCMs will limit the number of static agents allowed to be assigned depending on the FCM model used. If the user attempts to configure the number of static agents to be more than the maximum allowed number, a warning message will appear.

The following table lists the maximum number of static agents for each FCM model:

Table 75: Static Agent Limitation

FCM Model	Max Static Agents in Call Queue
FCM630A	75

Click on "Global Queue Settings" to configure Agent Login Extension Postfix and Agent Logout Extension Postfix. Once configured, users could log in the call queue as dynamic agent.

Dynamic Agent Login Settings

Agent Login Code Suffix:

Agent Logout Code Suffix:

Example: If 6500 is the queue extension,
Agent Login Extension Suffix is *,
Agent Logout Extension Suffix is **,
dial **6500*** to log in and **6500**** to log out.

Figure 140: Agent Login Settings

For example, if the call queue extension is 6500, Agent Login Extension Postfix is * and Agent Logout Extension Postfix is **, users could dial 6500* to login to the call queue as dynamic agent and dial 6500** to logout from the call queue. Dynamic agent does not need to be listed as static agent and can log in/log out at any time.

- Call queue feature code "Agent Pause" and "Agent Unpause" can be configured under Web GUI→**Call Features**→**Feature Codes**. The default feature code is *83 for "Agent Pause" and *84 for "Agent Unpause".

Note: When dialing the “Agent Pause” feature code, users can specify the reason for it. The following reasons are available: (1) Lunch, (2) Hourly Break, (3) Backoffice, (4) Email, and (5) Wrap.

- Queue recordings are shown on the Call Queue page under “Queue Recordings” Tab. Click on  to download the recording file in .wav format; click on  to delete the recording file. To delete multiple recording files by one click, select several recording files to be deleted and click on “Delete Selected Recording Files” or click on “Delete All Recording Files” to delete all recording files.

Call Center Settings and Enhancements

FCM supports light weight call center features including virtual queue and position announcement, allowing the callers to know their position on the call queue and giving them the option to either stay on the line waiting for their turn or activate a callback which will be initiated by the FCM once an agent is free.

To configure call center features, press on  an existing call queue and go under the advanced settings tab.

Following parameters are available:

Table 76: Call Center Parameters

Enable Virtual Queue	Enable virtual queue to activate call center features.
Virtual Queue Period	Configure the time in (s) after which the virtual queue will take effect and the menu will be presented to the caller to choose an option. Default is 20s.
Virtual Queue Mode	<p>Offered to caller after timeout: After the virtual queue period passes, the caller will enter the virtual call queue and be presented with a menu to choose an option, the choices are summarized below:</p> <ul style="list-style-type: none"> • Press * to set current number as callback number. • Press 0 to set a callback number different than current caller number. • Press # to keep waiting on the call queue.

	<p>Triggered on user request: In this mode, the callers can activate the virtual queue by pressing 2, then they will be presented with the menu to choose an option as below:</p> <ul style="list-style-type: none"> • Press * to set current number as callback number. • Press 0 to set a callback number different than current caller number. • Press # to keep waiting on the call queue.
Virtual Queue Outbound Prefix	System will add this prefix to dialed numbers when calling back users.
Enable Virtual Queue Timeout	When this option is enabled and after a caller registers a call back request on the virtual queue. While all the agents are busy, the FCM will call an agent once he/she is idle again, this timeout is used for how long the FCM continues calling the agent and if the agent doesn't answer the call, then the callback request will timeout and expire.
Write Timeout	Configure the virtual queue callback timeout period in seconds.
Enable Virtual Queue Position Announcement	<p>Enable the announcement of the caller's position periodically.</p> <p>Note: Queue position will now be announced to the caller upon entering the queue.</p>
Position Announcement Interval	Configure the period of time in (s) during which the FCM will announce the caller's position in the call queue.
Enable Virtual Queue Wait Time Announcement	When enabled the FCM will announce the estimated queue wait time to callers if the estimated wait time is longer than 1 minute.
Queue Chairman	Select the extension to act as chairman of the queue (monitoring).
Virtual Queue Welcome Prompt	Click on "Upload Audio File" to upload the VQ welcome prompt.
Enable Agent Login	When enabled, statics agents can conveniently log in and out of a queue by configuring a programmable key on their phones as a shortcut.

Queue Auto fill enhancement:

The waiting callers are connecting with available members in a parallel fashion until there are no more available members or no more waiting callers.

For example, in a call queue with linear method, if there are two available agents, when two callers call in the queue at the same time, FCM will assign the two callers to each of the two available agents at the same time, rather than assigning the second caller to second available agent after the first agent answers the call from the first caller.

Queue Statistics

Along with call center features, users can also gather detailed call queue statistics allowing them to make better changes/decision to manage better the call distribution and handling based on time, agent, and queue. To access call queue statistics, go to Web GUI→Call Features→Call Queue and click on “Call Queue Statistics”, the following page will be displayed:

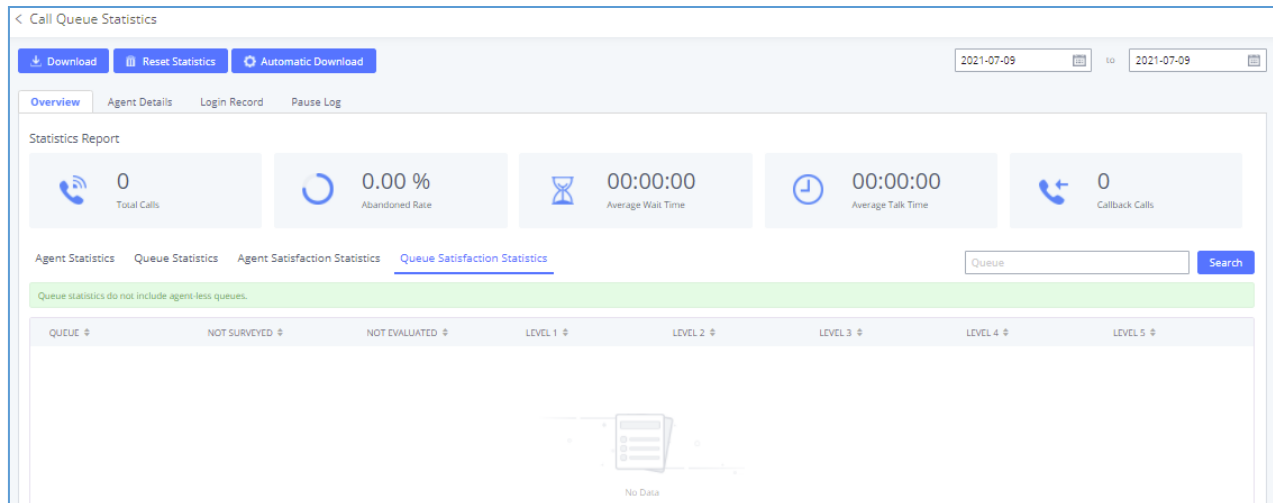

Figure 141: Call Queue Statistics

- Agent statistics: shows the number of calls and call-related information of agents;
- Queue Statistics: counts the number of calls in the queue and information such as calls, waiting, and callback;
- Agent satisfaction statistics used for user's rating of agents;
- Queue satisfaction statistics counts the score survey statistics.

The overview page performs seat statistics, queue statistics, seat satisfaction statistics, and queue satisfaction statistics according to the business. Agent statistics record the number of calls and call-related information of agents; queue counts the number of calls in the queue and information such as calls, waiting, and callback; agent satisfaction statistics are survey statistics based on user ratings of agents; queue satisfaction statistics are user-queue the score survey statistics

By selecting a time interval, administrators can get detailed statistics for agent(s) such as total calls, answered calls etc, as well as for the queue(s) such as ABANDONED CALLS also a detailed information for the queue's call log by clicking on Options→Information button and the below window will pop up:

Details				
Queue:	6500	Total Calls:	3	
Answered Calls:	1	Abandoned Calls:	2	
Answered Rate:	33.33 %	Average Wait Time:	00:00:03	
Total Calls Answered Calls Abandoned Calls				
DATE	CALLER ID	ABANDONED	WAIT TIME	TALK TIME
2020-12-02 09:38:09	1005	Yes	00:00:00	00:00:00
2020-12-02 09:38:48	1005	Yes	00:00:00	00:00:00
2020-12-02 09:39:01	1005	No	00:00:03	00:00:04

Figure 142: Queue's call log details

User can download statistics on CSV format by clicking on the “Download”, also the statistics can be cleared using “Reset Statistics” button.

The statistics can be automatically sent to a specific email address on a preconfigured Period, this can be done by clicking on “Automatic Download”, and user will be directed to below page where he can configure the download period (Day/Week/Month) and the Email where the statistics will be sent (Email settings should be configured correctly):

Automatic Download

Automatically send call queue statistics to the configured email address at the specified frequency and time.

Automatic Download:

Report Type: All Overview Agent Details Login Record Pause Log

Automatic Download:

Period:

Email: [Email Template](#)

Figure 143: Automatic Download Settings - Queue Statistics

Significantly more information is now available FCM's queue statistics page. In addition to the information presented in previous firmware, users can now view a call log that displays calls to all agents and queues, a dynamic agent login/logout record, and a pause log. Statistics reports for these new pages can be obtained by pressing the Download button in the top left corner of the Call Queue Statistics page. The reports are in .CSV format and will be packaged into a single tar.gz file upon download.

Agent Details is a call log that shows every call to each individual agent from all queues. The following information is available:

- Time – the date and time the call was received.
- Agent – the agent that was rung for the call.
- Queue – the queue that the call went to.
- Caller ID Number – the CID of the caller
- Abandoned – indicates whether the call was picked up or not by that specific agent. If the call rang several agents simultaneously, and this specific agent did not pick up the call, the call will be considered abandoned even if a different agent in the same queue picked it up.
- Wait Time – the amount of time that the call was waiting in queue after dialing in.
- Talk Time – the duration of the call after it was picked up by agent.

TIME	AGENT	QUEUE	CALLER ID NUMBER	ABANDONED	WAIT TIME	TALK TIME
2019-11-08 10:56:36	2000	6500	1000	No	00:00:05	00:00:29
2019-11-08 11:09:07	2000	6500	1000	No	00:00:07	00:01:51
2019-11-08 11:18:17	2000	6500	1000	Yes	00:00:04	00:00:00

Figure 144: Agent details

Login Record is a report that shows the timestamps of dynamic agent logins and logouts and calculates the amount of time the dynamic agents were logged in. Dynamic agents are extensions that log in and out either via agent login/logout codes (configured in Global Queue Settings page). A new record will be created only when an agent logs out. The following information is available:

- Agent – the extension that logged in and out.

- Queue – the queue that the extension logged in and out of.
- Login Time – the time that the extension logged into the queue.
- Logout Time – the time that the extension logged out of the queue.
- Login Duration – the total length of time that the extension was logged in.

AGENT	QUEUE	LOGIN TIME	LOGOUT TIME	LOGIN DURATION
2000	6500	2019-11-08 09:48:53	2019-11-08 09:53:00	00:04:07
2000	6500	2019-11-08 09:53:10	2019-11-08 09:55:22	00:02:12

Figure 145: Login Record

Pause Log is a report that shows the times of agent pauses and unpauses and calculates the amount of time that agents are paused. If an agent is part of several queues, an entry will be created for each queue. An entry will only be created after an agent unpauses. The following information is available:

- Agent – the extension that paused and unpaused.
- Queue – the queue that the agent is in.
- Pause Time – the time that the agent paused.
- Resume Time – the time that the agent unpaused.
- Pause Duration – the total length of time the agent was paused for.

AGENT	QUEUE	PAUSE TIME	RESUME TIME	PAUSE DURATION
2000	6500	2019-11-08 11:32:00	2019-11-08 11:33:33	00:01:33
2000	6500	2019-11-08 11:32:00	2019-11-08 11:33:33	00:01:33

Figure 146: Pause Log

Switchboard

Switchboard is a Web GUI tool for call queue monitoring and management, admin can access to it from the menu Call Features → Call Queue then press “Switchboard”.

Following page will be displayed:

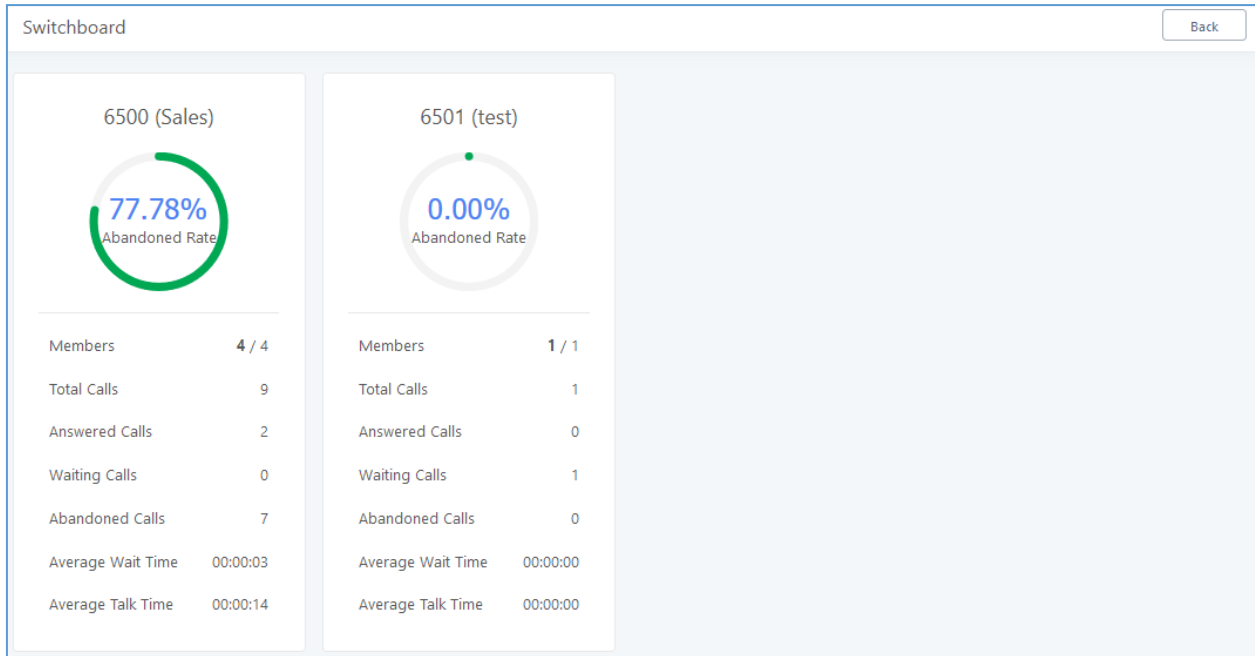

Figure 147: Switchboard Summary

Page above summarizes the available queues statistics and if one of the queues is clicked the user will be redirected to page below:

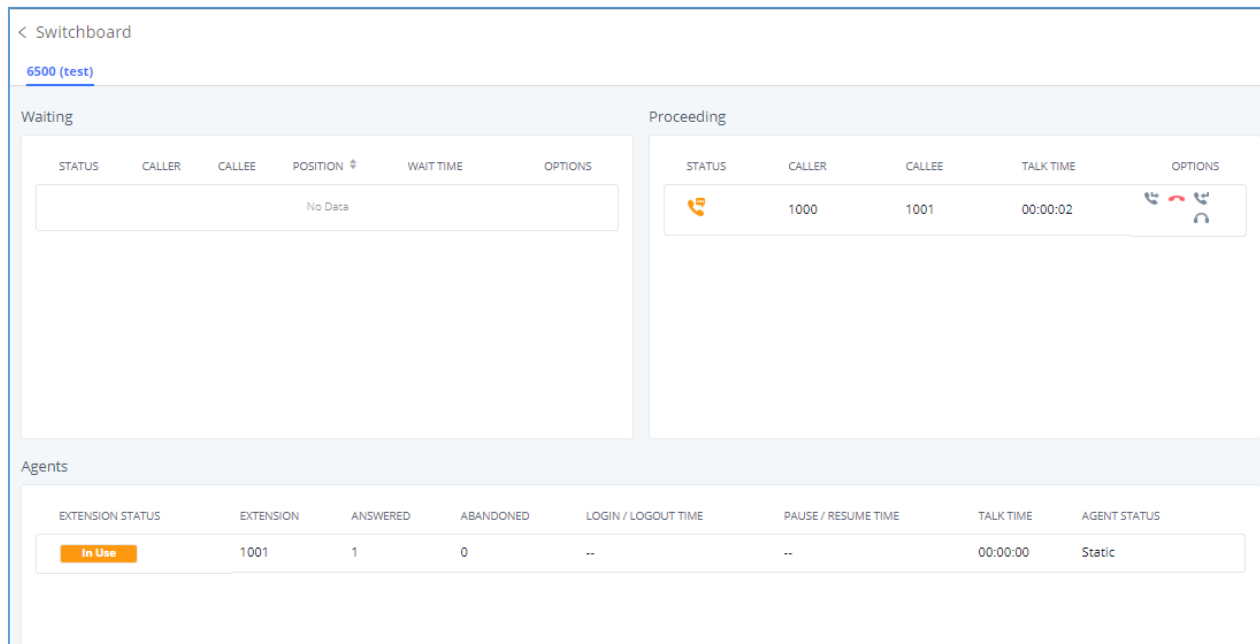

Figure 148: Call Queue Switchboard

The table below gives a brief description for the main menus:

Table 77: Switchboard Parameters

Waiting	This menu shows the current waiting calls along with the caller id and the option to hang-up call by pressing on the  button.
Proceeding	Shows the current established calls along with the caller id and the callee (agent) as well as the option to hang-up, transfer, add meeting or barge-in the call.
Agents	Displays the list of agents in the queue and the extension status (idle, ringing, in use or unavailable) along with some basic call statistics and agent's mode (static or dynamic). Note: the dashboard will show the number of calls (answered and abandoned) of each agent. For dynamic agents, it will count the number of calls starting from the last login time.

There are three different privilege levels for Call Queue management from the switchboard: Super Admin, QueueChairman, and Queue Agent.

- **Super Admin** - Default admin of the FCM. Call queue privileges include being able to view and edit all queue agents, monitor, and execute actions for incoming and ongoing calls for each extension in Switchboard, and generate Call Queue reports to track performance.
- **Queue Chairman** - User appointed by Super Admin to monitor and manage an assigned queue extension via Switchboard. The Queue Chairman can log into the FCM user portal with his extension number and assigned user password. To access the Switchboard, click on “*Value-added Features*” in the side menu and click on “*Call Queue*”. In the image below, User 1001 is the Queue Chairman appointed to manage Queue Extension 6500 and can see all the agents of the queue in the Switchboard.

The screenshot shows the Switchboard interface for extension 6500 (test). It features two call log tables and an agents table.

STATUS	CALLER	CALLEE	POSITION	WAIT TIME	OPTIONS
	1002	6500	1	00:00:08	

STATUS	CALLER	CALLEE	TALK TIME	OPTIONS
	1004	1003	00:00:27	

EXTENSION STATUS	EXTENSION	ANSWERED	ABANDONED	LOGIN / LOGOUT TIME	PAUSE / RESUME TIME	TALK TIME	AGENT STATUS
Ringing	1000	0	2	--	--	00:00:00	Static
In Use	1003	1	0	--	--	00:00:00	Static

Figure 149: Queue Chairman

- **Queue Agent** - User appointed by Super Admin to be a member of a queue extension. A queue agent can log into the FCM user portal with his extension number and assigned user password. To access the Switchboard, click on “*Value-added Features*” in the side menu and click on “*Call Queue*”. However, a queue agent can view and manage only his own calls and statistics, but not other agents’ in the queue extension. In the image below, User 1000 is a queue agent and can see only his own information in the Switchboard.

< Switchboard

[6500 \(test\)](#)

Waiting						Proceeding				
STATUS	CALLER	CALLEE	POSITION	WAIT TIME	OPTIONS	STATUS	CALLER	CALLEE	TALK TIME	OPTIONS
	1000	6500	1	00:00:01		No Data				

EXTENSION STATUS	EXTENSION	ANSWERED	ABANDONED	LOGIN / LOGOUT TIME	PAUSE / RESUME TIME	TALK TIME	AGENT STATUS
Ringing	1001	1	1	--	--	00:00:04	Static

Figure 150: Queue Agent

Global Queue Settings

As explained before, under this section users can configure the feature codes for Dynamic agent login and logout, and also can now customize the keys for virtual queue options like shown below.

Global Queue Settings

Dynamic Agent Login Settings

Agent Login Code Suffix:

Agent Logout Code Suffix:

Example: If 6500 is the queue extension,
Agent Login Extension Suffix is *,
Agent Logout Extension Suffix is **,
dial **6500*** to log in and **6500**** to log out.

Virtual Queue Callback Key Settings

* Call Back Current Number:

* Custom Callback Number:

* Continue Waiting:

Figure 151: Global Queue Settings

Table 78: Global Queue Settings

Dynamic Agent Login Settings	
Agent Login Code Suffix	Configure the code to dial after the queue extension to log into the queue (i.e. queue extension + suffix). If no suffix is configured, dynamic agents will not be able to log in
Agent Logout Code Suffix	Configure the code to dial after the queue extension to log out of the queue (i.e. queue extension + suffix). If no suffix is configured, dynamic agents will not be able to log out.
Virtual Queue Callback Key Settings	
Call Back Current Number	Press the feature key configured to set your current number as callback number.
Custom Callback Number	Press these feature key configured to set a custom callback number.
Continue Waiting	Press the feature key configured to continue waiting.

PICKUP GROUPS

The FCM630A supports pickup group feature which allows users to pick up incoming calls for other extensions if they are in the same pickup group, by dialing "Pickup Extension" feature code (by default *8).

Configure Pickup Groups

Pickup groups can be configured via Web GUI → **Call Features** → **Pickup Groups**.

- Click on  to create a new pickup group.
- Click on  to edit the pickup group.
- Click on  to delete the pickup group.

Select extensions from the list on the left side to the right side.

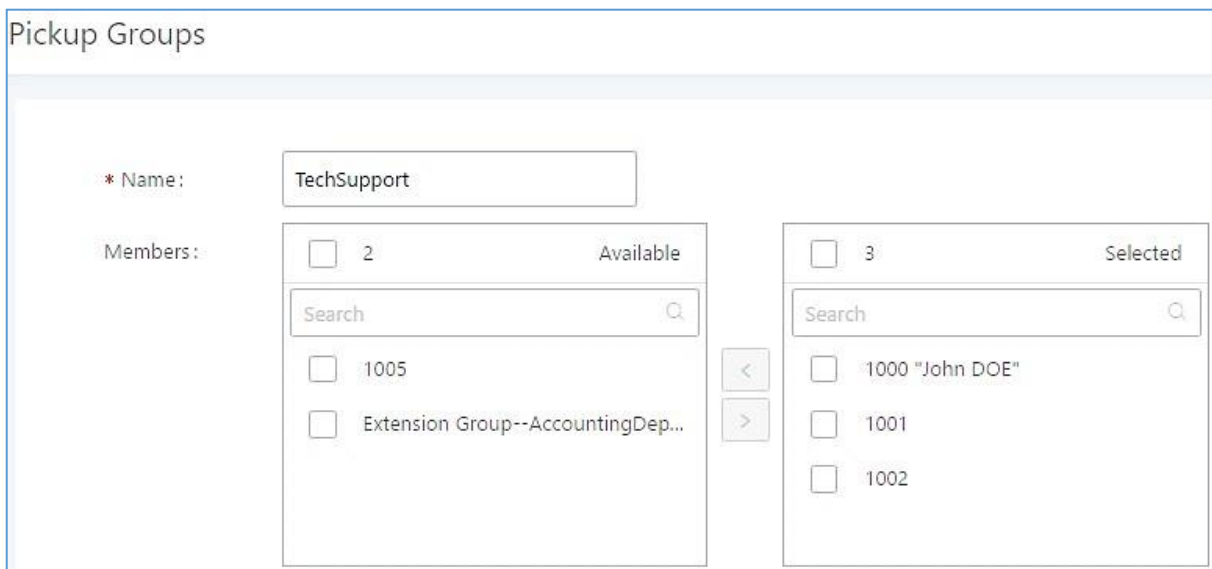

Figure 152: Edit Pickup Group

Configure Pickup Feature Code

When picking up the call for the pickup group member, the user only needs to dial the pickup feature code. It is not necessary to add the extension number after the pickup feature code. The pickup feature code is configurable under Web GUI → Call Features → Feature Codes.

The default feature code for call pickup extension is *8, otherwise if the person intending to pick up the call knows the ringing extension they can use ** followed by the extension number in order to perform the call pickup operation. The following figure shows where you can customize these features codes

The screenshot shows the 'Feature Codes' configuration page. At the top, there are tabs for 'Feature Maps', 'DND/Call Forward', and 'Feature Codes'. Below the tabs are two buttons: 'Reset All' and 'Default All'. The main area contains a list of feature codes, each with an input field and a checkbox. The 'Pickup Extension' field, which contains the value '*8', is highlighted with a red rectangular box. Other feature codes include 'Voicemail Access Code' (*98), 'Agent Pause' (*83), 'Paging Prefix' (*81), 'Blacklist Add' (*40), 'Pickup on Ringing Prefix' (**), 'Direct Dial Mobile Phone Prefix' (*88), 'Call Completion Cancel' (*12), 'Listen Spy' (*54), 'Barge Spy' (*56), 'PMS Wakeup Service' (*35), 'Presence Status' (*48), 'Voicemail Group Access Code' (*99), 'My Voicemail' (*97), 'Agent Unpause' (*84), 'Intercom Prefix' (*80), 'Blacklist Remove' (*41), 'Pickup In-call Prefix' (*45), 'Direct Dial Voicemail Prefix' (*), 'Call Completion Request' (*11), 'Enable Spy' (checkbox), 'Whisper Spy' (*55), 'Wakeup Service' (*36), 'Update PMS Room Status' (*23), and 'Dynamic Agent Logout' (*85).

Feature Code	Value	Enabled
* Voicemail Access Code:	*98	<input checked="" type="checkbox"/>
* Agent Pause:	*83	<input checked="" type="checkbox"/>
* Paging Prefix:	*81	<input checked="" type="checkbox"/>
* Blacklist Add:	*40	<input checked="" type="checkbox"/>
* Pickup on Ringing Prefix:	**	<input checked="" type="checkbox"/>
* Pickup Extension:	*8	<input checked="" type="checkbox"/>
* Direct Dial Mobile Phone Prefix:	*88	<input checked="" type="checkbox"/>
* Call Completion Cancel:	*12	<input checked="" type="checkbox"/>
* Listen Spy:	*54	<input type="checkbox"/>
* Barge Spy:	*56	<input type="checkbox"/>
* PMS Wakeup Service:	*35	<input checked="" type="checkbox"/>
* Presence Status:	*48	<input checked="" type="checkbox"/>
* Voicemail Group Access Code:	*99	<input checked="" type="checkbox"/>
* My Voicemail:	*97	<input checked="" type="checkbox"/>
* Agent Unpause:	*84	<input checked="" type="checkbox"/>
* Intercom Prefix:	*80	<input checked="" type="checkbox"/>
* Blacklist Remove:	*41	<input checked="" type="checkbox"/>
* Pickup In-call Prefix:	*45	<input type="checkbox"/>
* Direct Dial Voicemail Prefix:	*	<input checked="" type="checkbox"/>
* Call Completion Request:	*11	<input checked="" type="checkbox"/>
Enable Spy:	<input type="checkbox"/>	<input type="checkbox"/>
* Whisper Spy:	*55	<input type="checkbox"/>
* Wakeup Service:	*36	<input checked="" type="checkbox"/>
* Update PMS Room Status:	*23	<input checked="" type="checkbox"/>
* Dynamic Agent Logout:	*85	<input checked="" type="checkbox"/>

Figure 153: Edit Pickup Feature Code

MUSIC ON HOLD

Music On Hold settings can be accessed via Web GUI→PBX Settings→Music On Hold. In this page, users could configure music on hold class and upload music files. The "default" Music On Hold class already has 5 audio files defined for users to use.

<input type="checkbox"/>	DISABLED/ENABLED	SOUND FILE	OPTIONS
<input type="checkbox"/>	ON	macroform-cold_day.wav	
<input type="checkbox"/>	ON	macroform-robot_dity.wav	
<input type="checkbox"/>	ON	macroform-the_simplicity.wav	
<input type="checkbox"/>	ON	manolo_camp-morning_coffee.wav	
<input type="checkbox"/>	ON	reno_project-system.wav	

Figure 154: Music On Hold Default Class

- Click on "Create New MOH Class" to add a new Music On Hold class.
- Click on to configure the MOH class sort method to be "Alpha" or "Random" for the sound files.
- Click on next to the selected Music On Hold class to delete this Music On Hold class.
- Click on Upload to start uploading. Users can upload:
 - Single files with 8KHz Mono Music file, or
 - Music on hold files in a compressed package with .tar, .tar.gz and .tgz as the suffix. The file name can only be letters, digits, or special characters -_

- the size for the uploaded file should be less than 30M, the compressed file will be applied to the entireMoH.
- Users could also download all the music on hold files from FCM. In the Music On Hold page, click on  and the file will be downloaded to your local PC.
- Click on  to disable it from the selected Music On Hold Class.
- Click on  to enable it from the selected Music On Hold Class.
- Select the sound files and click on  to delete all selected Music On Hold files.

The FCM630A allows Users to select the Music On Hold file from WebGUI to play it. The FCM630A will initiate a call to the selected extension and play this Music On Hold file once the call is answered.

Steps to play the Music On Hold file:

1. Click on the  button for the Music On Hold file.
2. In the prompted window, select the extension to playback and click .

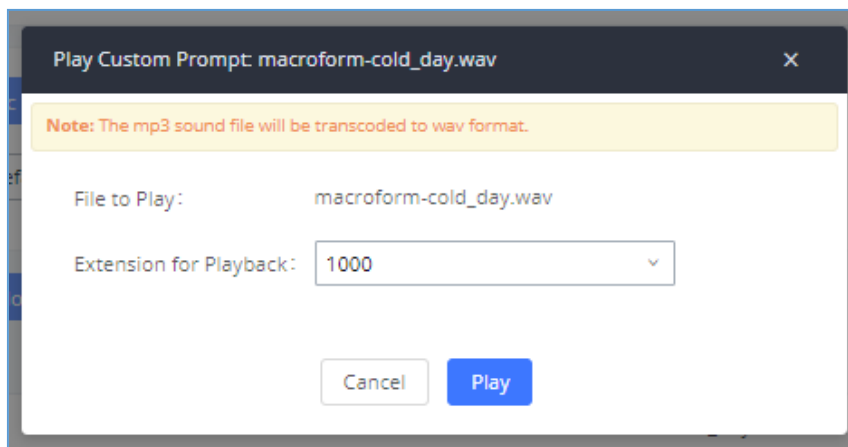

Figure 155: Play Custom Prompt

3. The selected extension will ring.
4. Answer the call to listen to the music playback.

Users could also record their own Music On Hold to override an existing custom prompt, this can be done by following those steps:

1. Click on .
2. A message of confirmation will pop up, as shown below.

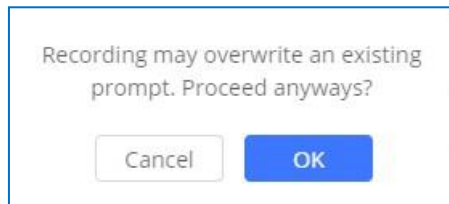

Figure 156: Information Prompt

3. Click .
4. In the prompted window, select the extension to playback and click .

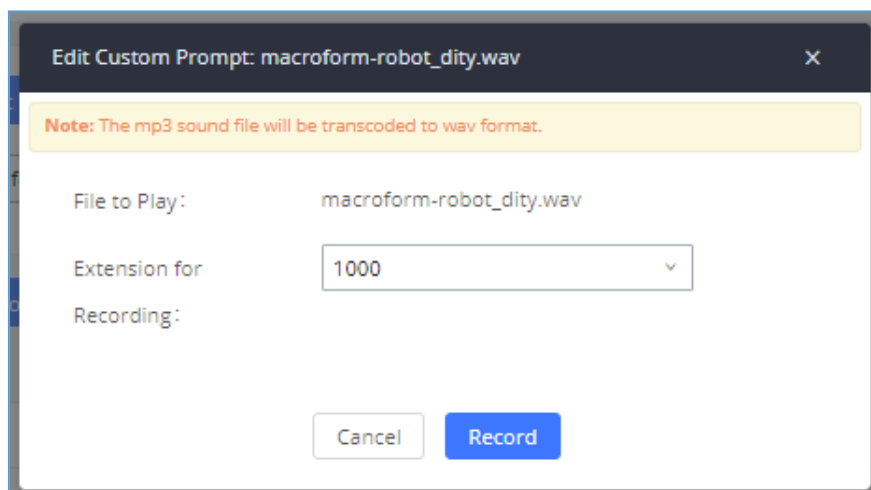

Figure 157: Record Custom Prompt

5. Answer the call and start to record your new music on hold
6. Hangup the call and refresh Music On Hold page then you can listen to the new recorded file.

 **Notes:**

Once the MOH file is deleted, there are two ways to recover the music files.

- Users could download the MOH file from this link:

<http://downloads.asterisk.org/pub/telephony/sounds/releases/asterisk-moh-opsound-wav-2.03.tar.gz>

After downloading and unzip the pack, users could then upload the music files to FCM.

- Factory reset could also recover the MOH file on the FCM.
-

BUSY CAMP-ON

The FCM630A supports busy camp-on/call completion feature that allows the PBX to camp on a called party and inform the caller as soon as the called party becomes available given the previous attempted call has failed.

The configuration and instructions on how to use busy camp-on/call completion feature can be found in the following guide:

http://download.fiberme.com/docs/FCM630A_Busy_Camp_on_Guide.pdf

PRESENCE

FCM does support SIP presence feature which allows users to advertise their current availability status and willingness to receive calls, this way other users can use their phones in order to monitor the presence status of each user and decide whether to call them or not based on their advertised availability.

This feature is different than BLF which is used to monitor the dialog status for each extension (Ringing, Idle or Busy). Instead, the SIP presence module gives more options for users to choose which state they want to put themselves in.

In order to configure the presence status of an extension from the web GUI, users can access the menu of configuration using one of the two following methods:

- From admin account, go under the menu **Extension/Trunk**→**Extensions** and choose the desired extension to edit then navigate to the “Features” tab.

OR

- From the User Portal, go under the menu **Basic Information**→**Extensions** and navigate to the Features tab to have the following options.

The screenshot displays the SIP Presence Configuration interface. At the top, the 'Call Transfer' section includes a 'Presence Status' dropdown menu currently set to 'Available'. Below this, there are five tabs: 'Available', 'Away', 'Chat', 'Custom Presence Status', and 'Unavailable'. The 'Available' tab is selected. The main configuration area contains several dropdown menus: 'Call Forward Unconditional' (None), 'Call Forward No Answer' (None), 'Call Forward Busy' (None), 'CFU Time Condition' (All Time), 'CFN Time Condition' (All Time), and 'CFB Time Condition' (All Time). Below these, there is a 'Do Not Disturb' checkbox (unchecked) and a 'DND Time Condition' dropdown (All Time). At the bottom, there is an 'FWD Whitelist' input field with a red minus icon and a blue plus icon labeled 'Add FWD Whitelist'.

Figure 158: SIP Presence Configuration

Select which status to set from the presence status selection drop list, six options are available and below is a brief description of these states:

Table 79: SIP Presence Status

Available	The contact is online and can participate in conversations/phone calls.
Away	The contact is currently away (ex: for lunch break).
Chat	The contact has limited conversation flexibility and can only be reached via chat.
Do Not Disturb	The Contact is on DND (Do Not Disturb) mode.
Custom Presence Status	Please enter the presence status for this mode on the Web GUI. Up to 64 characters.
Unavailable	The contact is unreachable for the moment, please try to contact later.

Another option to set the presence status and which is more practical is using the feature code from the user's phone, one the user dials the feature code (default is *48), a prompt will be played to select which status they want to put themselves in, by pressing the corresponding key.

The feature code can be enabled and customized from the Web GUI→**Call Features**→**Feature Codes**.

* Voicemail Access Code:	<input type="text" value="*98"/>	<input checked="" type="checkbox"/>	* My Voicemail:	<input type="text" value="*97"/>	<input checked="" type="checkbox"/>
* Agent Pause:	<input type="text" value="*83"/>	<input checked="" type="checkbox"/>	* Agent Unpause:	<input type="text" value="*84"/>	<input checked="" type="checkbox"/>
* Paging Prefix:	<input type="text" value="*81"/>	<input checked="" type="checkbox"/>	* Intercom Prefix:	<input type="text" value="*80"/>	<input checked="" type="checkbox"/>
* Blacklist Add:	<input type="text" value="*40"/>	<input checked="" type="checkbox"/>	* Blacklist Remove:	<input type="text" value="*41"/>	<input checked="" type="checkbox"/>
* Call Pickup on Ringing:	<input type="text" value="**"/>	<input checked="" type="checkbox"/>	* Pickup In-call:	<input type="text" value="*45"/>	<input type="checkbox"/>
* Pickup Extension:	<input type="text" value="*8"/>	<input checked="" type="checkbox"/>	* Direct Dial Voicemail Prefix:	<input type="text" value="*"/>	<input checked="" type="checkbox"/>
* Direct Dial Mobile Phone Prefix:	<input type="text" value="*88"/>	<input checked="" type="checkbox"/>	* Call Completion Request:	<input type="text" value="*11"/>	<input checked="" type="checkbox"/>
* Call Completion Cancel:	<input type="text" value="*12"/>	<input checked="" type="checkbox"/>	Enable Spy:	<input type="checkbox"/>	
* Listen Spy:	<input type="text" value="*54"/>		* Whisper Spy:	<input type="text" value="*55"/>	
* Barge Spy:	<input type="text" value="*56"/>		* Wakeup Service:	<input type="text" value="*36"/>	<input checked="" type="checkbox"/>
* PMS Wakeup Service:	<input type="text" value="*35"/>	<input checked="" type="checkbox"/>	* Update PMS Room Status:	<input type="text" value="*23"/>	<input checked="" type="checkbox"/>
* Presence Status:	<input type="text" value="*48"/>	<input checked="" type="checkbox"/>	* Dynamic Agent Logout:	<input type="text" value="*85"/>	<input checked="" type="checkbox"/>

Figure 159: SIP Presence Feature Code

When a user does change his/her SIP presence status by making a call using presence feature code, the FCM will create a corresponding CDR entry showing the call as Action type = PRESENCE_STATUS.

STATUS	CALL FROM	CALL TO	ACTION TYPE	START TIME	CALL TIME	TALK TIME	ACCOUNT CODE	RECORDING FILE OPTIONS
	*1000*1000	*48	PRESENCE_STATUS	2019-12-11 17:55:33	0:00:13	0:00:13	-	-
	admin VFAX [T...	998653221	DIAL	2019-12-11 17:51:09	0:00:22	0:00:22	-	-
	*1000*1000	6500	QUEUE[6500]	2019-12-11 17:32:45	0:00:04	0:00:00	-	-

Figure 160: Presence Status CDR

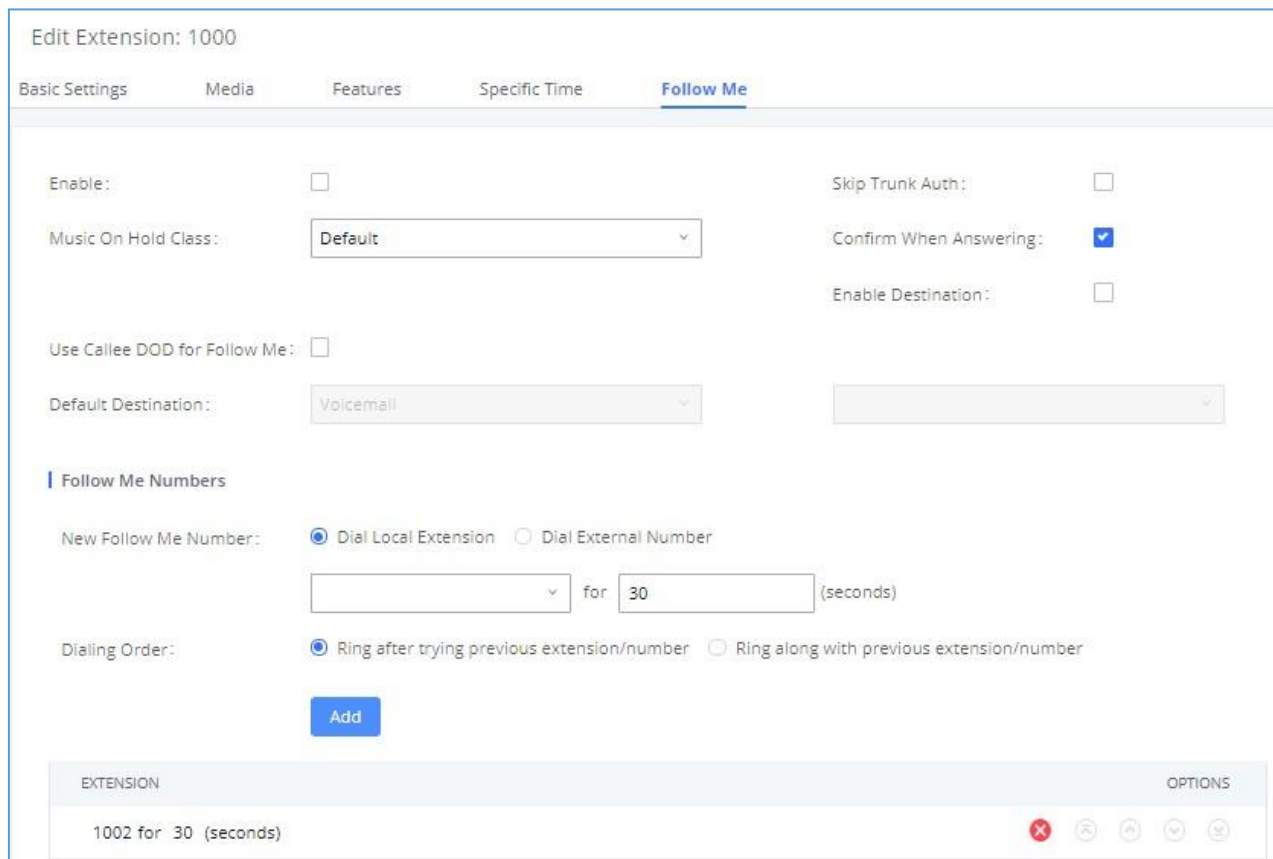

FOLLOW ME

Follow Me is a feature on the FCM630A that allows users to direct calls to other phone numbers and have them ring all at once or one after the other. Calls can be directed to users' home phone, office phone, mobile and etc. The calls will get to the user no matter where they are. Follow Me option can be found under extension settings page Web GUI → Extension/Trunk → Extensions.

To configure follow me:

1. Choose the extension and click on .
2. Go to the Follow me tab to add destination numbers and enable the feature.

Edit Extension: 1000

Basic Settings Media Features Specific Time **Follow Me**

Enable: Skip Trunk Auth:

Music On Hold Class: Default Confirm When Answering:

Use Callee DOD for Follow Me: Enable Destination:

Default Destination: Voicemail

Follow Me Numbers

1002 for 30 (seconds)	<input type="button" value="X"/> <input type="button" value="↶"/> <input type="button" value="↷"/> <input type="button" value="↺"/> <input type="button" value="↻"/>

Figure 161: Edit Follow Me

- Click on  to add local extensions or external numbers to be called after ringing the extension selected in the first step.
- Once created, it will be displayed on the follow me list. And you can click on  to delete the Follow Me.

The following table shows the Follow Me configuration parameters:

Table 80: Follow Me Settings

Enable	Configure to enable or disable Follow Me for this user.
Skip Trunk Auth	If external number is added in the Follow Me, please make sure this option is enabled or the “Skip Trunk Auth” option of the extension is enabled, otherwise the external Follow Me number cannot be reached.
Music On Hold Class	Configure the Music On Hold class that the caller would hear while tracking users
Confirm When Answering	By default, it is enabled, and user will be asked to press 1 to accept the call or to press 2 to reject the call after answering a Follow Me call. If it is disabled, the Follow Me call will be established once after the user answers.
Enable Destination	When enabled, the call will be routed to the default destination if no one in the Follow Me extensions answers the call.
Default Destination	Configure the destination if no one in the Follow Me extensions answers the call. The available options are: <ul style="list-style-type: none"> • Extension • Voicemail • Queues • Ring Group • Voicemail Group

	<ul style="list-style-type: none"> • IVR • External Number
Follow Me Numbers	The added numbers are listed here. Click on   to arrange the order. Click on  to delete the number. Click on  to add new numbers.
New Follow MeNumber	Add a new Follow Me number which could be a 'Local Extension' or 'External Number'. The selected dial plan should have permissions to dial the defined external number.
Dialing Order	Select the order in which the Follow Me destinations will be dialed to reach the user: ring all at once or ring one after the other.

Click on "Follow Me Options" under Web GUI→Extension/Trunk→Extension page to enable or disable the options listed in the following table.

Table 81: Follow Me Options

Playback Incoming Status Message	If enabled, the PBX will playback the incoming status message before starting the Follow Me steps.
Record the Caller's Name	If enabled, the PBX will record the caller's name from the phone so it can be announced to the callee in each step.
Playback Unreachable Status Message	If enabled, the PBX will playback the unreachable status message to the caller if the callee cannot be reached.

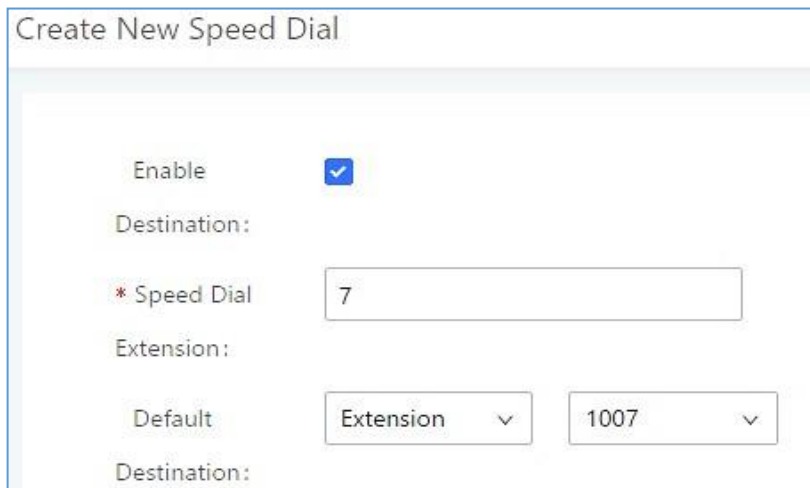

SPEED DIAL

The FCM630A supports Speed Dial feature that allows users to call a certain destination by pressing one or four digits on the keypad. This creates a system-wide speed dial access for all the extensions on the FCM630A.

To enable Speed Dial, on the FCM630A Web GUI, go to page Web GUI→**Call Features**→**Speed Dial**.

User should first click on **+ Add**. Then decide from one digit up to four digits combination used for Speed Dial and select a dial destination from “Default Destination”. The supported destinations include extension, voicemail, meeting room, voicemail group, IVR, ring group, call queue, page group, DISA, Dial by Name and external number.

Total: 5 Goto

Figure 163: List of Speed Dial

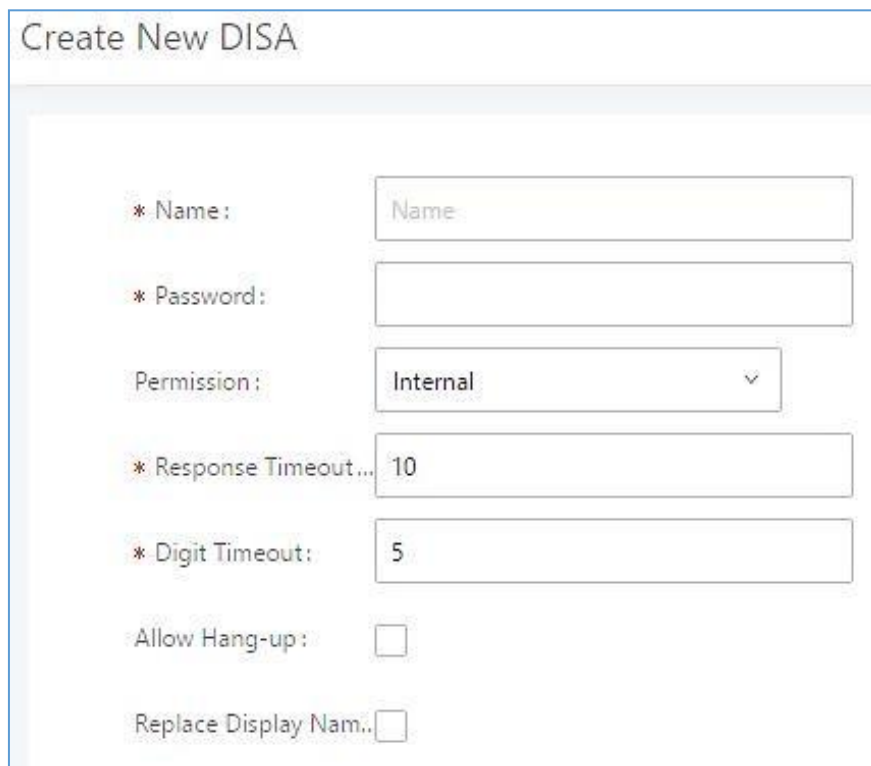

DISA

In many situations, the user will find the need to access his own IP PBX resources, but he is not physically near one of his extensions. However, he does have access to his own cell phone. In this case, we can use what is commonly known as DISA (Direct Inward System Access). Under this scenario, the user will be able to call from the outside, whether it is using his cell phone, pay phone, regular PSTN, etc. After calling into FCM630A, the user can then dial out via the SIP trunk connected to FCM630A as it is an internal extension.

The FCM630A supports DISA to be used in IVR or inbound route. Before using it, create new DISA under WebGUI→Call Features→DISA.

- Click on  to add a new DISA.
- Click on  to edit the DISA configuration.
- Click on  to delete the DISA.

The screenshot shows a web form titled "Create New DISA". The form contains the following fields and options:

- * Name:
- * Password:
- Permission: (dropdown menu)
- * Response Timeout...:
- * Digit Timeout:
- Allow Hang-up:
- Replace Display Nam..:

Figure 164: Create New DISA

The following table details the parameters to set and configure DISA feature on FCM630A PBX.

Table 82: DISA Settings

Name	Configure DISA name to identify the DISA.
Password	Configure the password (digit only) required for the user to enter before using DISA to dial out. Note: The password must be at least 4 digits.
Permission	Configure the permission level for DISA. The available permissions are "Internal", "Local", "National" and "International" from the lowest level to the highest level. The default setting is "Internal". If the user tries to dial outbound calls after dialing into the DISA, the FCM630A will compared the DISA's permission level with the outbound route's privilege level. If the DISA's permission level is higher than (or equal to) the outbound route's privilege level, the call will be allowed to go through.
Response Timeout	Configure the maximum amount of time the FCM630A will wait before hangingup if the user dials an incomplete or invalid number. The default setting is 10 seconds.
Digit Timeout	Configure the maximum amount of time permitted between digits when the user is typing the extension. The default setting is 5 seconds.
Allow Hangup	If enabled, during an active call, users can enter the FCM630A Hangup feature code (by default it is *0) to disconnect the call or hang up directly. A new dial tone will be heard shortly for the user to make a new call. The default setting is "No".
Replace Display Name	If enabled, the FCM will replace the caller display name with the DISA name.

Once successfully created, users can configure the inbound route destination as "DISA" or IVR key event as "DISA". When dialing into DISA, users will be prompted with password first. After entering the correct password, a second dial tone will be heard for the users to dial out.

EMERGENCY

FCM supports configuration and management of numbers to be called in emergency situation, thus bypassing the regular outbound call routing process and allowing users in critical situation to dial out for emergency help with the possibility to have redundant trunks as point of exit in case one of the lines is down.

FCM630A is also now in full compliance with Kari's Law and Ray Baum's Act, for more information, please refer to the following links:

<https://www.fcc.gov/mlts-911-requirements>

http://download.fiberme.com/docs/FCM630A_Emergency_Calls_Guide.pdf

In addition, Emergency calls can be automatically recorded by toggling on the new Auto Record and recordings can be viewed in the new Emergency Recordings tab on the same page. Additionally, users can have these recordings be sent to the configured email address(es).

Email alerts are also supported after enabling the notification for the event under "**Maintenance → System Events**"

To configure emergency numbers, users need to follow below steps:

1. Navigate on the web GUI under "**Call Features → Emergency Calls**"
2. Click on  to add a new emergency number.
3. Configure the required fields "Name, Emergency Number and Trunk(s) to be used to reach the number".
4. Save and apply the configuration.

Figure 165: Emergency Number Configuration

The table below gives more description of the configuration Parameters when creating emergency numbers.

Table 83: Emergency Numbers Parameters

Name	Configure the name of the emergency call. For example, "emergency911","emergency211" and etc.
Emergency Number	Config the emergency service number. For example,"911","211" and etc.
Emergency Level	Select the emergency level of the number. Level "3" means the most urgent.
Disable Hunt on Busy	If this option is not enabled, when the lines of trunks which the coming emergency call routes by are completely occupied, the line-grabbing function will automatically cut off a line from all busy lines so that the coming emergency call can seize it for dialing out. This option is not enabled by default.
Custom Prompt	This option sets a custom prompt to be used as an announcement to the person receiving an emergency call. The file can be uploaded from the page "Custom Prompt". Click "Prompt" to add additional record.
Use Trunks	Select the trunks for the emergency call. Select one trunk at least and select five trunks at most.
Members Notified	Select the members who will be notified when an emergency call occurs.
Strip	Specify the number of digits that will be Stripped from the beginning of the dialed number before the call is placed via the selected trunk.
Prepend	Specify the digits to be Prepend before the call is placed via the trunk. Those digits will be prepended after the dialing number is stripped.
Auto Record	When enabled, emergency call will be automatically recorded.
Send Recording File	When enabled recording files will be sent to the configured email address.
Email Address	The email address to where the recording files will be sent.

CALLBACK

Callback is designed for users who often use their mobile phones to make long distance or international calls which may have high service charges. The callback feature provides an economic solution for reduce the cost from this.

The callback feature works as follows:

1. Configure a new callback on the FCM630A.
2. On the FCM630A, configure destination of the inbound route for sip trunk to callback.
3. Save and apply the settings.
4. The user calls the trunk number of the FCM630A using the mobile phone, which goes to callbackdestination as specified in the inbound route.
5. Once the user hears the ringback tone from the mobile phone, hang up the call on the mobile phone.
6. The FCM630A will call back the user.
7. The user answers the call.
8. The call will be sent to DISA or IVR which directs the user to dial the destination number.
9. The user will be connected to the destination number.

In this way, the calls are placed and connected through trunks on the FCM630A instead of to the mobile phone directly. Therefore, the user will not be charged on mobile phone services for long distance or international calls.

To configure callback on the FCM630A, go to Web GUI→Call Features→Callback page and click on

[+ Create New Callback](#)

. Configuration parameters are listed in the following table.

Table 84: Callback Configuration Parameters

Name	Configure a name to identify the Callback. (Enter at least two characters)
CallerID Pattern	Configure the pattern of the callers allowed to use this callback. The caller who places the inbound call needs to have the CallerID match this pattern so that the caller can get callback after hanging up the call. Note: If leaving as blank, all numbers are allowed to use this callback.

Outbound Prepend	Configure the prepend digits to be added at before dialing the outside number. The number with prepended digits will be used to match the outbound route. '-' is the connection character which will be ignored.
Delay Before Callback	Configure the number of seconds to be delayed before calling back the user.
Destination	Configure the destination which the callback will direct the caller to. Two destinations are available: <ul style="list-style-type: none">• IVR• DISA The caller can then enter the desired number to dial out via FCM630A trunk.

BLF AND EVENT LIST

BLF

The FCM630A supports BLF monitoring for extensions, ring group, call queue, meeting room and parking lot. For example, on the user's phone, configure the parking lot number 701 as the BLF monitored number. When there is a parked call on 701, the LED for this BLF key will light up in red, meaning a call is parked against this parking lot. Pressing this BLF key can pick up the call from this parking lot.

Note:

On the FIBERME FAP series phones, the MPK supports "Call Park" mode, which can be used to park the call by configuring the MPK number as call park feature code (e.g., 700). MPK "Call Park" mode can also be used to monitor and pickup parked call if the MPK number is configured as parking lot (e.g., 701).

Event List

Besides BLF, users can also configure the phones to monitor event list. In this way, both local extensions on the same FCM630A and remote extensions on the VOIP trunk can be monitored. The event list setting is under Web GUI → **Call Features** → **Event List**.

- Click on "Add" to add a new event list.
- Sort selected extensions manually in the Eventlist
- Click on  to edit the event list configuration.
- Click on  to delete the event list.

Table 85: Event List Settings

URI	Configure the name of this event list (for example, office_event_list). Please note the URI name cannot be the same as the extension name on the FCM630A. The valid characters are letters, digits, _ and -.
------------	--

Local Extensions	Select the available extensions/Extension Groups listed on the local FCM630A to be monitored in the event list.
Remote Extensions	If LDAP sync is enabled between the FCM630A and the peer FCM630A, the remote extensions will be listed under "Available Extensions". If not, manually enter the remote extensions under "Special Extensions" field.
Special Extensions	Manually enter the remote extensions in the peer/register trunk to be monitored in the event list. Valid format: 5000,5001,9000

Create New Event List

* URI:

Event Type:

Local Extensions:

<input type="checkbox"/> 9 items Available <input type="text" value="Search here"/> <ul style="list-style-type: none"> <input type="checkbox"/> 1003 "Betty" <input type="checkbox"/> 1004 <input type="checkbox"/> 1005 "Will" <input type="checkbox"/> 1006 "Iala" <input type="checkbox"/> 1007 "Kiki" 	<input type="button" value="←"/> <input type="button" value="→"/> <input type="button" value="↑"/> <input type="button" value="↓"/>	<input type="checkbox"/> 3 items Selected <input type="text" value="Search here"/> <ul style="list-style-type: none"> <input type="checkbox"/> 1000 "Mia" <input type="checkbox"/> 1001 "John" <li style="background-color: #e0f0ff;"><input type="checkbox"/> 1002 "Chris"
---	--	---

<input type="checkbox"/> 0 item Available <input type="text" value="Search here"/> <div style="text-align: center; padding: 20px 0;">None</div>	<input type="button" value="←"/> <input type="button" value="→"/> <input type="button" value="↑"/> <input type="button" value="↓"/>	<input type="checkbox"/> 0 item Selected <input type="text" value="Search here"/> <div style="text-align: center; padding: 20px 0;">None</div>
---	--	--

Special Extensions:

Figure 167: Create New Event List

Remote extension monitoring works on the FCM630A via event list BLF, among Peer SIP trunks or Register SIP trunks (register to each other). Therefore, please properly configure SIP trunks on the FCM630A first before using remote BLF feature. Please note the SIP end points need support event list BLF in order to monitor remote extensions.

When an event list is created on the FCM630A and remote extensions are added to the list, the FCM630A will send out SIP SUBSCRIBE to the remote FCM630A to obtain the remote extension status. When the SIP end points register and subscribe to the local FCM630A event list, it can obtain the remote extension status from this event list. Once successfully configured, the event list page will show the status of total extension and subscribers for each event list. Users can also select the event URI to check the monitored extension's status and the subscribers' details.

Notes:

- To configure LDAP sync, please go to FCM630A Web GUI → **Extension/Trunk** → **VoIP Trunk**. You will see "Sync LDAP Enable" option. Once enabled, please configure password information for the remote peer FCM630A to connect to the local FCM630A. Additional information such as port number, LDAP outbound rule, LDAP Dialed Prefix will also be required. Both the local FCM630A and remote FCM630A need enable LDAP sync option with the same password for successful connection and synchronization.
 - Currently LDAP sync feature only works between two FCM630As.
 - (Theoretically) Remote BLF monitoring will work when the remote PBX being monitored is non-FCM630A PBX. However, it might not work the other way around depending on whether the non-FCM630A PBX supports event list BLF or remote monitoring feature.
-

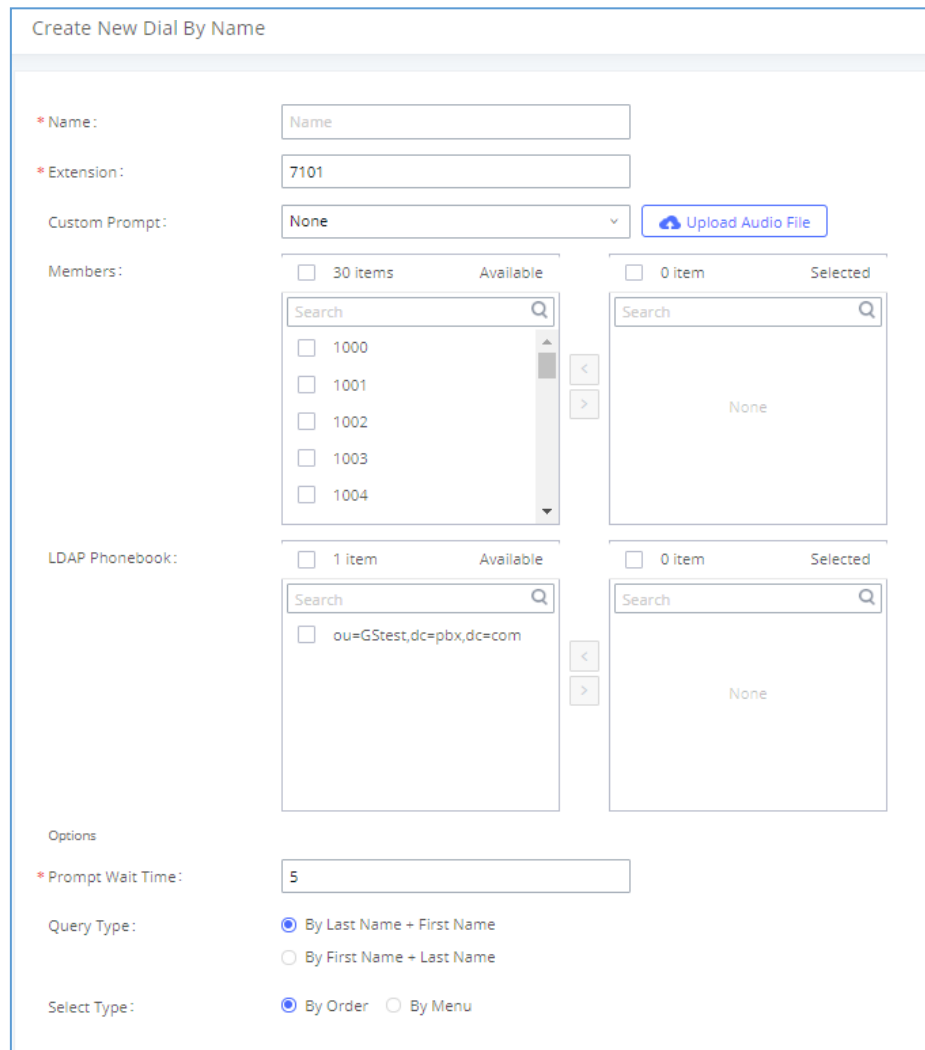

DIAL BY NAME

Dial by Name is a feature on the PBX that allows caller to search a person by first or last name via his/her phone's keypad. The administrator can define the Dial by Name directory including the desired extensions in the directory and the searching type by "first name" or "last name". After dialing in, the PBX IVR/Auto Attendant will guide the caller to spell the digits to find the person in the Dial by Name directory. This feature allows customers/clients to use the guided automatic system to contact the enterprise employees without having to know the extension number, which brings convenience and improves business image for the enterprise.

Dial by Name Configuration

The administrators can create the dial by name group under Web GUI→Call Features→Dial By Name.

Create New Dial By Name

* Name:

* Extension:

Custom Prompt: [Upload Audio File](#)

Members:

Select Type: By Order By Menu

Figure 168: Create Dial by Name Group

User Settings

First Name: John Last Name: DOE

Email Address: [] * User Password: *****

* Language: Default * Concurrent Registration... 1

Mobile Phone Number: []

Figure 169: Configure Extension First Name and Last Name

1. Name

Enter a Name to **identify** the Dial by Name group.

2. Extension

Configure the direct dial extension for the Dial By Name group.

3. Custom Prompt

This option sets a custom prompt for directory to announce to a caller. The file can be uploaded from the page "Custom Prompt". Click "Upload Audio File" to add additional record.

4. Available Extensions/Selected Extensions

Select available extensions from the left side to the right side as the directory for the Dial By Name group. Only the selected extensions here can be reached by the Dial By Name IVR when dialing into this group. The extensions here must have a valid first name and last name configured under Web GUI → Extension/Trunk → Extensions in order to be searchable in Dial By Name directory through IVR. By specifying the extensions here, the administrators can make sure unscreened calls will not reach the company employee if he/she does not want to receive them directly.

5. Prompt Wait Time

Configure "Prompt Wait Time" for Dial By Name feature. During Dial By Name call, the caller will need to input the first letters of First/Last name before this wait time is reached. Otherwise, timeout will occur, and the call might hang up. The timeout range is between 3 and 60 seconds.

6. Query Type

Specify the query type. This defines how the caller will need to enter to search the directory. By First

Name: enter the first 3 digits of the first name to search the directory.

By Last Name: enter the first 3 digits of the last name to search the directory.

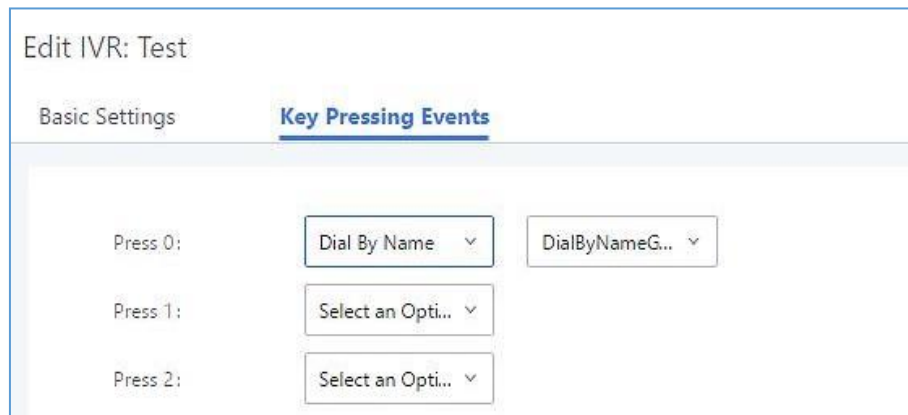

7. Select Type

Specify the select type on the searching result. The IVR will confirm the name/number for the party the caller would like to reach before dialing out.

By Order: After the caller enters the digits, the IVR will announce the first matching party's name and number. The caller can confirm and dial out if it is the destination party, or press * to listen to the next matching result if it is not the desired party to call.

By Menu: After the caller enters the digits, the IVR will announce 8 matching results. The caller can press number 1 to 8 to select and call or press 9 for results in next page.

The Dial by Name group can be used as the destination for inbound route and key pressing event for IVR. The group name defined here will show up in the destination list when configuring IVR and inbound route. If Dial by Name is set as a key pressing event for IVR, user could use "*" to exit from Dial by Name, then re-enter IVR and start a new event. The following example shows how to use this option.

The screenshot shows a web interface for editing an IVR configuration. The title is "Edit IVR: Test". There are two tabs: "Basic Settings" and "Key Pressing Events", with the latter being active. Below the tabs, there are three rows of configuration for key presses:

Key Press	Event	Destination
Press 0:	Dial By Name	DialByNameG...
Press 1:	Select an Opti...	
Press 2:	Select an Opti...

ACTIVE CALLS AND MONITOR

The active calls on the FCM630A are displayed in Web GUI→System Status→Active Calls page. Users can monitor the status, hang up the call as well as barge in the active calls in real time manner.

Active Calls Status

To view the status of active calls, navigate to Web GUI→System Status→Active Calls. The following figure shows extension 1000 is calling 1005. 1005 is ringing.

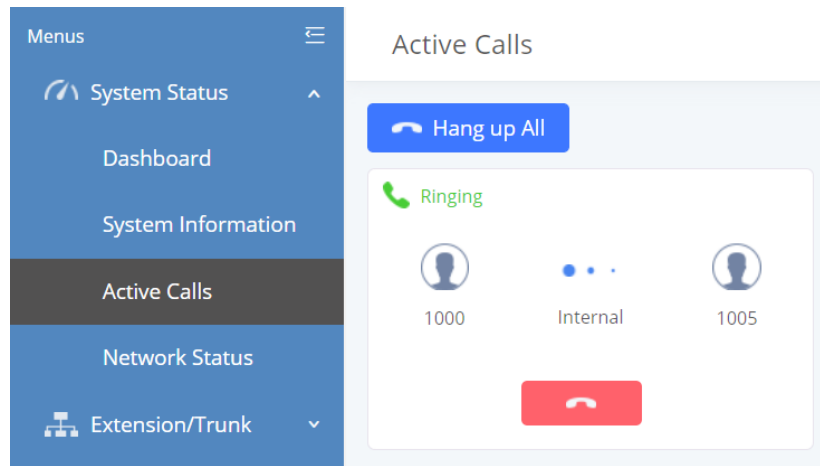

Figure 172: Status→PBX Status→Active Calls - Ringing

The following figure shows the call between 1000 and 1005 is established.

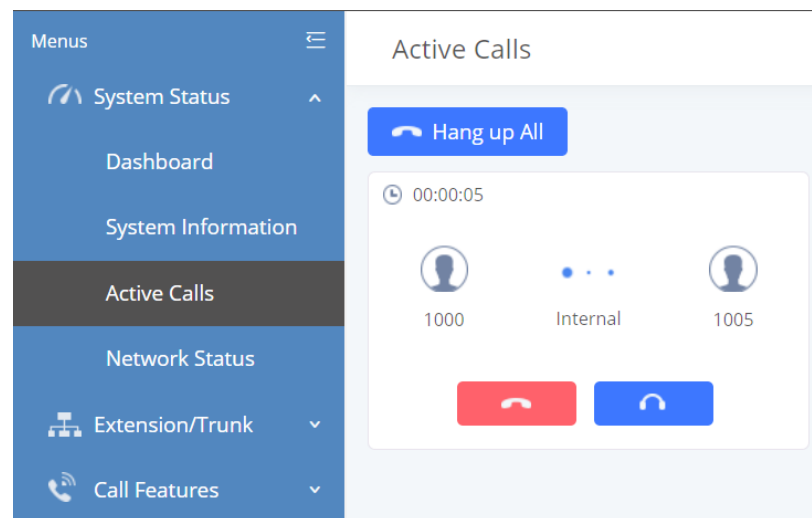

Figure 173: Status→PBX Status→Active Calls – Call Established

The gray color of the active call means the connection of call time is less than half an hour. It means this call is normal.

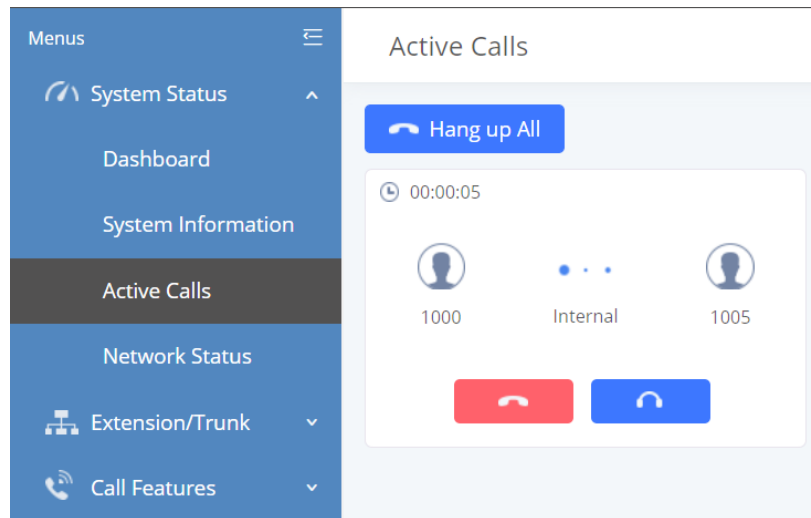

Figure 174: Call Connection less than half hour

The orange color of the active call means the connection of call time is greater than half an hour but less than one hour. It means this call is a bit long.

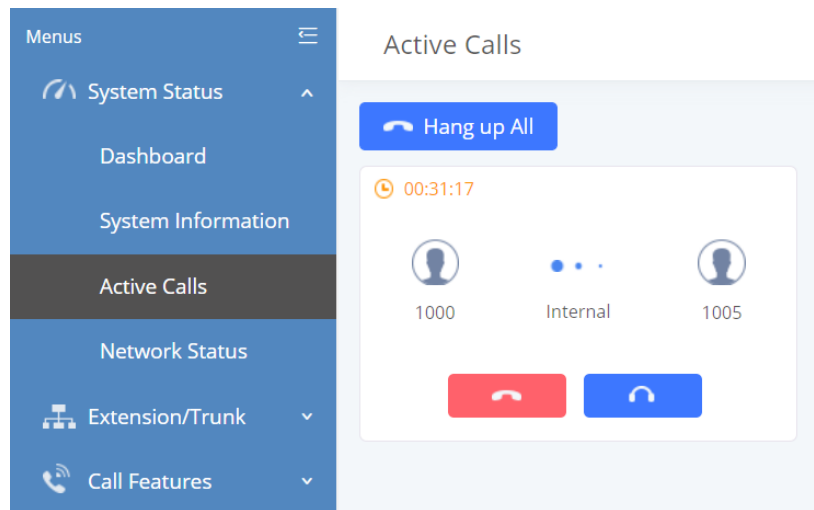

Figure 175: Call Connection between half an hour and one hour

The red color of the active call means the connection of call time is more than one hour. It means this call could be abnormal.

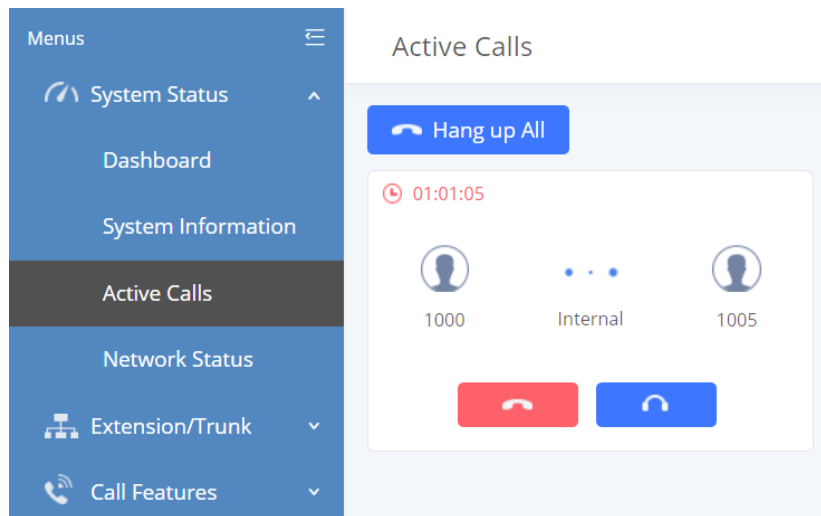

Figure 176: Call Connection more than one hour

Hang Up Active Calls

To hang up an active call, click on  icon in the active call dialog. Users can also click on  to hang up all active calls.

Call Monitor

During an active call, click on icon  and the monitor dialog will pop up.

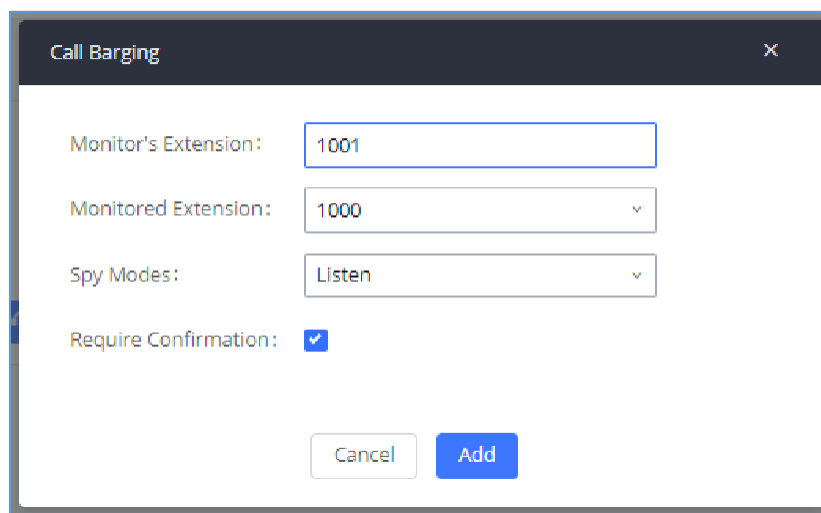

Figure 177: Configure to Monitor an Active Call

In the “Monitor” dialog, configure the following to monitor an active call:

1. Enter an available extension for “Monitor’s Extension” which will be used to monitor the active call.
2. “Monitored Extension” must be one of the parties in the active call to be monitored.
3. Select spy mode. There are three options in “Spy Mode”.

- **Listen**

In “Listen” mode, the extension monitoring the call can hear both parties in the active call but the audio of the user on this extension will not be heard by either party in the monitored active call.

- **Whisper**

In “Whisper” mode, the extension monitoring the call can hear both parties in the active call. The user on this extension can only talk to the selected monitored extension and he/she will not be heard by the other party in the active call. This can be usually used to supervise calls.

- **Barge**

In “Barge” mode, the extension monitoring the call can talk to both parties in the active call. The call will be established similar to three-way meeting.

4. Enable or disable “Require Confirmation” option. If enabled, the confirmation of the invited monitor’s extension is required before the active call can be monitored. This option can be used to avoid adding participant who has auto-answer configured, or call forwarded to voicemail.
5. Click on “Add”. An INVITE will be sent to the monitor’s extension. The monitor can answer the call and start monitoring. If “Require Confirmation” is enabled, the user will be asked to confirm to monitor the call.

Another way to monitor active calls is to dial the corresponding feature codes from an extension. Please refer to

[Table 86: FCM630A Feature Codes] and **[Call Recording]** section for instructions.

CALL FEATURES

The FCM630A supports call recording, transfer, call forward, call park and other call features via feature code. This section lists all the feature codes in the FCM630A and describes how to use the call features.

Feature Codes

Table 86: FCM630A Feature Codes

Feature Maps	
Blind Transfer	<ul style="list-style-type: none"> • Default code: #1 • Enter the code during active call. After hearing "Transfer", you will hear dial tone. Enter the number to transfer to. Then the user will be disconnected, and transfer is completed. • Options: <ul style="list-style-type: none"> <li style="text-align: center;">Disable Allow Caller: Enable the feature code on caller side only. Call Forward Unconditional Activate	<ul style="list-style-type: none"> • Default Code: *72 • Enter the code and follow the voice prompt. Or enter the code followed by the extension to forward the call.
Call Forward Unconditional Deactivate	<ul style="list-style-type: none"> • Default Code: *73
Remote Call Forward Enable	<p>Enable this option and configure the Remote Call Forward Whitelist below to allow specific extensions to dial the remote call forwarding feature codes to set call forwarding for any extension.</p>

Feature Codes

Voicemail Access Code	<ul style="list-style-type: none"> • Default Code: *98 • Enter *98 and follow the voice prompt. Or dial *98 followed by the extension and # to access the entered extension's voicemail box.
My Voicemail	<ul style="list-style-type: none"> • Default Code: *97 • Press *97 to access the voicemail box.
Agent Pause	<ul style="list-style-type: none"> • Default Code: *83 • Pause the agent in all call queues.

Agent Unpause	<ul style="list-style-type: none"> • Default Code: *84 • Unpause the agent in all call queues.
Paging Prefix	<ul style="list-style-type: none"> • Default Code: *81 • To page an extension, enter the code followed by the extension number.
Intercom Prefix	<ul style="list-style-type: none"> • Default Code: *80 • To intercom an extension, enter the code followed by the extension number.
Blacklist Add	<ul style="list-style-type: none"> • Default Code: *40 • To add a number to blacklist for inbound route, dial *40 and follow the voice prompt to enter the number.
Blacklist Remove	<ul style="list-style-type: none"> • Default Code: *41 • To remove a number from current blacklist for inbound route, dial *41 and follow the voice prompt to remove the number.
Call Pickup on Ringing	<ul style="list-style-type: none"> • Default Code: ** • To pick up a call for any extension xxxx, enter the code followed by the extension number xxxx.
Pickup In-call	<ul style="list-style-type: none"> • Default Code: *45 (Disabled by default). • If “Pickup In-call” feature is enabled, only the extensions added in “Allowed to seamless transfer” in the extension’s Seamless Transfer Privilege Control List” can pick up the call.
Pickup Extension	<ul style="list-style-type: none"> • Default Code: *8 • This code is for the pickup group, which can be assigned for each extension on the extension configuration page. • If there is an incoming call to an extension, the other extensions within the same pickup group can dial *8 directly to pick up the call.

Direct Dial Voicemail Prefix	<ul style="list-style-type: none"> • Default Code: * • This code is for the user to directly dial or transfer to an extension's voicemail. • For example, directly dial *5000 will have to call go into the extension 5000's voicemail. If the user would like to transfer the call to the extension 5000's voicemail, enter *5000 as the transfer target number.
Direct Dial Mobile Phone Prefix	<ul style="list-style-type: none"> • Default Code: *88 • If you have the permission to call mobile phone number, use this prefix plus the extension number can dial the mobile phone number of this extension directly.
Call Completion Request	<ul style="list-style-type: none"> • Default Code: *11 • This code is for the user who wants to use Call Completion to complete a call.
Call Completion Cancel	<ul style="list-style-type: none"> • Default Code: *12 • This code is for the user who wants to cancel Call Completion request.
Enable Spy	Check this box to enable spy feature codes. Disabled by default.
Listen Spy	<ul style="list-style-type: none"> • Default Code: *54 (“Enable Spy” needs to be checked) • This is the feature code to listen in on a call to monitor performance. Monitor’s line will be muted, and neither party will hear from the monitor’s extension.
Whisper Spy	<ul style="list-style-type: none"> • Default Code: *55 (“Enable Spy” needs to be checked) • This is the feature code to speak to one side of the call (for example, whisper to employees to help them handle a call). Only one side will be able to hear from the monitor’s extension.
Barge Spy	<ul style="list-style-type: none"> • Default Code: *56 (“Enable Spy” needs to be checked) • This is the feature code to join in on the call to assist both parties

<p>Wakeup Service</p>	<ul style="list-style-type: none"> • Default Code: *36 • Dial this code to access FCM wakeup service, you can add, update, activate or deactivate wakeup service.
<p>PMS Wakeup Service</p>	<ul style="list-style-type: none"> • Default Code: *35 • Dial this code to access FCM PMS wakeup service, you can add, update, activate or deactivate PMS wakeup service.
<p>PMS Remote Wakeup Service</p>	<ul style="list-style-type: none"> • Default Code: *37 • Allows the user to add, update, activate, and deactivate PMS wakeup service for other extensions.
<p>Update PMS Room Status</p>	<ul style="list-style-type: none"> • Default Code: *23 • Use this code with maid code to update PMS room status. Choose the status to set after hearing the prompt, for example: for maid 001 dial *23001 and then 1 after hearing the prompt.
<p>Presence Status</p>	<ul style="list-style-type: none"> • Dial this code to set the presence status of the extension. • Possible options are: <ul style="list-style-type: none"> 1:"unavailable" 2:"available" 3:"away" 4:"chat" 5:"dnd" 6:"userdef"
<p>Dynamic Agent Logout</p>	<ul style="list-style-type: none"> • Default Code: *85 • Use this code to logout the dynamic agent from all queues.

The FCM630A also allows user to one click enable / disable specific feature code as shown below:

Figure 178: Enable/Disable Feature codes

Parking Lot

User can create parking lots and their related slots under Web GUI → Call Features → Parking Lot. In the Parking Lot page, users can create lots of their own. This allows different groups within an organization to have their own parking lots instead of sharing one large parking lot with others. While creating a new parking lot, users can assign it a range that they think is appropriate for the group that will use the parking lot.

Figure 179: Parking Lot

User can create a new Parking lot by clicking on button “Add”:

Create New Parking Lot
Cancel Save

• Parking Lot Extension:

• Parking Slots:

• Parking Timeout (s):

Fallover Destination:

Forward to Destination on Timeout:

• Parking Lot Name:

Use parklot as extension:

Music on Hold Playlists:

Ring-All Callback on Timeout:

Figure 180: New Parking Lot

Table 87: Parking Lot

Parking Lot Extension	<ul style="list-style-type: none"> • Default Extension: 700 • During an active call, initiate blind transfer and then enter this code to park the call.
Parking Lot Name	<ul style="list-style-type: none"> • Set a name to the parking lot
Parked Slots	<ul style="list-style-type: none"> • Default Extension: 701-720 • These are the extensions where the calls will be parked, i.e., parking lots that the parked calls can be retrieved.
Use Parklot as Extension	<ul style="list-style-type: none"> • If checked, the parking lot number can be used as extension. The user can transfer the call to the parking lot number to park the call. Please note this parking lot number range might conflict with extension range.
Parking Timeout (s)	<ul style="list-style-type: none"> • Default setting is 300 seconds, and the maximum limit is 99.999 seconds. • This is the timeout allowed for a call to be parked. After the timeout, if the call is not picked up, the extension who parks the call will be called back.
Music On Hold Classes	Select the Music on Hold Class.

Failover Destination	Configures a callback failover destination when the extension that is called back is busy. The call will be routed to the destination number and this reduces the chance of dropping parked calls.
Ring All Callback on Timeout	If enabled, all registered endpoints of the extension will ring when callback occurs. Otherwise, only the original endpoint will be called back.
Forward to destination on timeout	If enabled, the call will be routed to the configured destination upon timeout. Otherwise, the call will be routed back to the original caller.
Timeout Destination	This option appears once Forward to Destination on Timeout is enabled. Upon park timeout, the call will be routed to the configured destination.
Parking Lot Timeout Alert-Info	Adds an Alert-Info header to parking lot callbacks after the Parking Timeout has been reached.

Call Park

The FCM630A provides call park and call pickup features via feature code.

Park a Call

There are two feature codes that can be used to park the call.

- *Feature Maps* → *Call Park (Default code #72)*

During an active call, press #72 and the call will be parked. Parking lot number (default range 701 to 720) will be announced after parking the call.

- *Feature Misc* → *Call Park (Default code 700)*

During an active call, initiate blind transfer (default code #1) and then dial 700 to park the call. Parking lot number (default range 701 to 720) will be announced after parking the call.

Retrieve Parked Call

To retrieve the parked call, simply dial the parking lot number and the call will be established. If a parked call is not retrieved after the timeout, the original extension who parks the call will be called back.

Call Recording

The FCM630A allows users to record audio during the call. If "Auto Record" is turned on for an extension, ringgroup, call queue or trunk, the call will be automatically recorded when there is established call with it. Otherwise, please follow the instructions below to manually record the call.

1. Make sure the feature code for "Start/Stop Call Recording" is configured and enabled.
2. After establishing the call, enter the "Start/Stop Call Recording" feature code (by default it is *3) followed by # or SEND to start recording.
3. To stop the recording, enter the "Start/Stop Call Recording" feature code (by default it is *3) followed by # or SEND again. Or the recording will be stopped once the call hangs up.
4. The recording file can be retrieved under Web GUI → **CDR**. Click on  to show and play the recording or click on  to download the recording file.

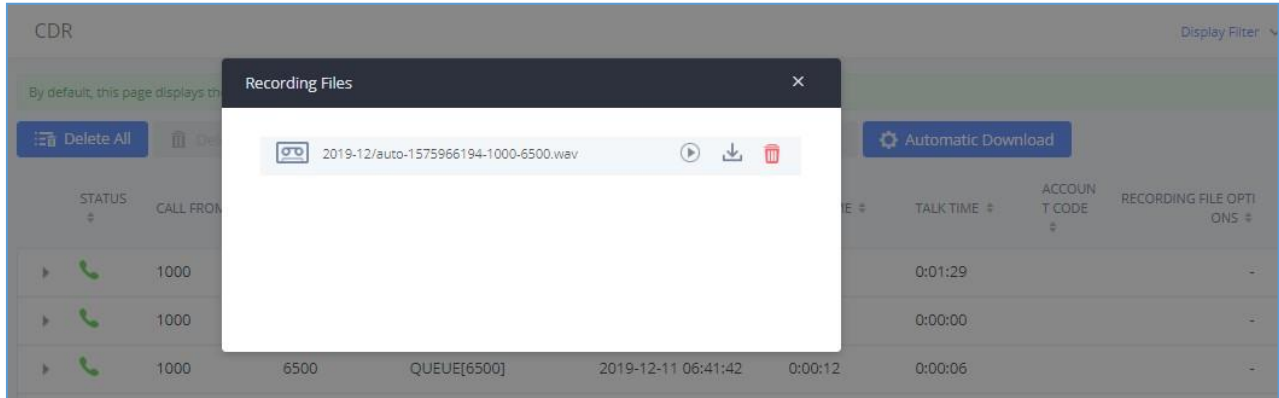

Figure 181: Download Recording File from CDR Page

The above recorded call's recording files are also listed under the FCM630A Web GUI→CDR→Recording Files.

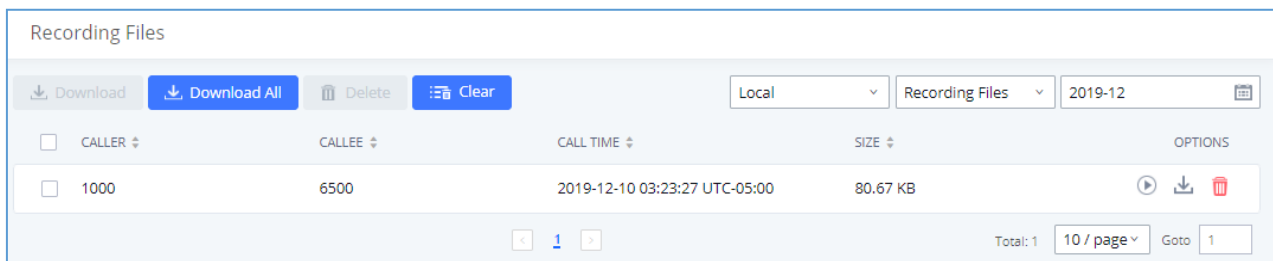

Figure 182: Download Recording File from Recording Files Page

Enable Spy

If “Enable Spy” option is enabled, feature codes for Listen Spy, Whisper Spy and Barge Spy are available for users to dial from any extension to perform the corresponding actions.

Assume a call is on-going between extension A and extension B, user could dial the feature code from extensionC to listen on their call (*54 by default), whisper to one side (*55 by default), or barge into the call (*56 by default).Then the user will be asked to enter the number to call, which should be either side of the active call, extensionA or B in this example.

 **Caution:**

“Enable Spy” allows any user to listen to any call by feature codes. This may result in the leakage of user privacy.

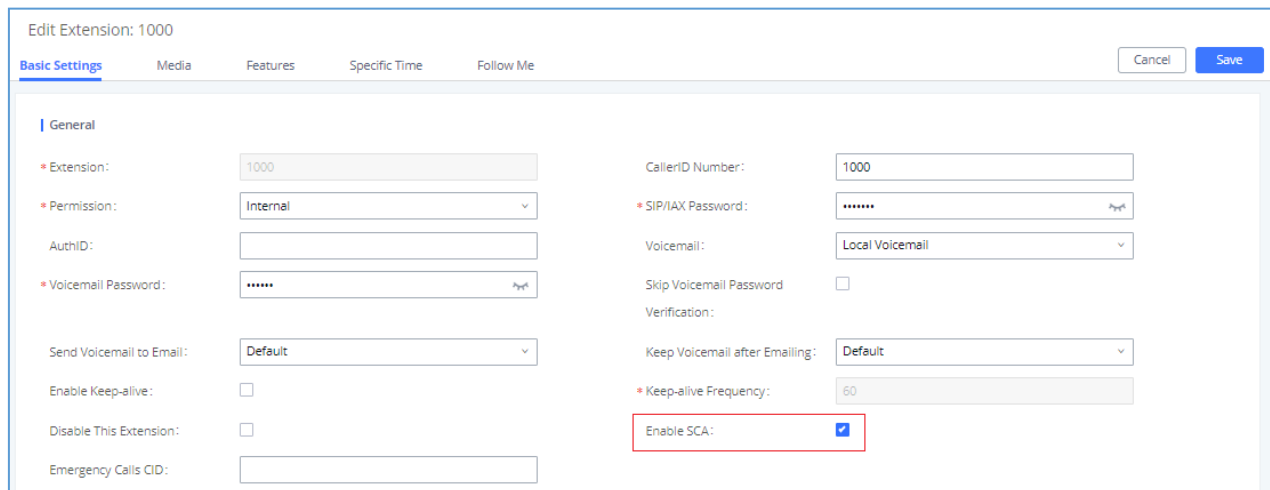

Shared Call Appearance (SCA)

Shared Call Appearance (SCA) functionality has been added to the FCM. With SCA, users can assign multiple devices to one extension, configure endpoints to monitor that extension, make actions on behalf of that extension such as viewing call status and placing and receiving calls, and even barging into existing calls. To configure the SCA functionality, please follow the steps below:

1. Users can enable SCA by navigating to the Extensions page, editing the desired extension, and enabling the option SCA.

Note: With SCA enabled, the Concurrent Registrations field can only have a value of 1.

The screenshot shows the 'Edit Extension: 1000' configuration page. The 'Basic Settings' tab is active. In the 'General' section, the 'Enable SCA' checkbox is checked and highlighted with a red box. Other visible settings include Extension: 1000, Permission: Internal, CallerID Number: 1000, SIP/IAX Password: masked, Voicemail: Local Voicemail, Skip Voicemail Password: unchecked, Verification: (empty), Send Voicemail to Email: Default, Keep Voicemail after Emailing: Default, Keep-alive Frequency: 60, and Emergency Calls CID: (empty). Buttons for 'Cancel' and 'Save' are in the top right.

Figure 183: Enabling SCA option under Extension's Settings

2. After enabling the option, navigate to *Call Features* → *SCA*. The newly enabled SCA extension will be listed. Click the "+" button under the Options column to add a number that will share the main extension's call appearance, which will be called private numbers.

SCA					
SCA Number Group		SCA Line Status			
STATUS	SHARED LINE	ROLE	IP AND PORT	SUBSCRIBED	OPTIONS
Unavailable	1000	shared	--	no	 
Total: 1					10 / page Goto 1

Figure 184: SCA Number Configuration

3. Configure the private number as desired.

Add Private Number ✕

* Private Number:

Related Shared Line:

Enable This Number:

Allow Origination from This Number:

Allow Termination to This Number:

Figure 185: SCA Private Number Configuration

4. Once the private number has been created, users must now register a device to it. To properly register a device to the private number, use the configured private number as the SIP User ID. Auth ID and Password will be the same as the main extensions. Once registration is complete, SCA is now configured.

Edit SCA Number Group:

* Shared Line Number:

Allow Call Retrieve from

Another Location:

Alert All Appearances for

Group Paging Calls:

Multiple Call Arrangement:

Allow Bridging between

Locations:

Bridge Warning Tone:

Figure 186: SCA Options

- Next, configure the VPK or MPK to Share for both the main extension and the private number. SCA is now configured for both endpoint devices.

The following table describe the SCA Number configuration setting:

Table 88: Add SCA Private Number

Private Number	Configures the private number for the SCA.
Related Shared Line	Display the related shared line.
Enable This Number	Whether enable this private number. If not enabled, this private number is only record in DB, it will not affect other system feature.
Allow Origination from This Number	Enable this option will allow calling from this private number. By default, it is enabled.

Allow Termination to ThisNumber	Enable this option will allows calls to this private number. By default, it is enabled.
--	---

The following table describes the options available when editing the SCA number:

Table 89: Editing the SCA Number

Shared Line Number	While SCA is enabled, this number will be the same as the extension number.
Allow Call Retrieve from Another Location	Allows remote call retrieval. Must be enabled in public hold. By default, it is enabled.
Alert All Appearances for Group Paging Calls	Allows all SCA group members to ring when the SCA shared number is paged. If disabled, only the SCA shared number will ring when paged. By default, it is disabled.
Multiple Call Arrangement	Allows simultaneous calls in an SCA group. By default, it is disabled.
Allow Bridging betweenLocations	Allows location bridging for SCA group. Must be enabled when using the Barge-In feature. By default, it is disabled.
Bridge Warning Tone	<p>Configures the notification in the bridge when another party join.</p> <ul style="list-style-type: none"> • None: No notification sound. • Barge-In only: Notification sound will play when another party join. • Barge-In and Repeat: Notification sound will play when another party joins and repeat every 30 seconds. <p>By default, it is set to “Barge-In Only”.</p>

ANNOUNCEMENT

The Announcement feature (not to be confused with Announcement Paging and Announcement Center) is a feature that allows users to set an unskippable audio file to play to callers before routing them to a configured destination. Announcements can be configured as a destination in the Inbound Routes page.

To configure Announcement, users need to follow below steps:

1. Navigate on the web GUI under “Call Features → Announcement”
2. Click on **+ Add** to add a new Announcement.
3. Configure the required fields Name, Prompt, Default Destination to be used for the announcement.

Save and apply the configuration.

Create New Announcement

* Name:

Prompt:

Default Destination:

Figure 187: Announcement settings

The table below gives more description of the configuration parameters when creating Announcement.

Table 90: Announcement Parameters

Name	Configure the name of the Announcement.
Prompt	Audio file that needs to be uploaded in order to be played for a specific destination.
Default Destination	Select the destination where to play the audio file.

PBX SETTINGS

This section describes internal options that have not been mentioned in previous sections yet. The settings in this section can be applied globally to the FCM630A, including general configurations, jitter buffer, RTP settings, ports config and STUN monitor. The options can be accessed via Web GUI→PBX Settings→General Settings.

PBX Settings/General Settings

Table 91: Internal Options/General

General Preferences	
Global Outbound CID	Configure the global CallerID used for all outbound calls when no other CallerID is defined with higher priority. If no CallerID is defined for extension or trunk, the global outbound CID will be used as CallerID.
Global Outbound CID Name	Configure the global CallerID Name used for all outbound calls. If configured, all outbound calls will have the CallerID Name set to this name. If not, the extension's CallerID Name will be used.
Ring Timeout	Configure the number of seconds to ring an extension before the call goes to the user's voicemail box. The default setting is 60. Note: This is the global value used for each extension if "Ring Timeout" field is left empty on the extension configuration page.
Call Duration Limit	Configure the maximum duration of call-blocking.
Maximum Call Duration (s)	The maximum call duration (in seconds). The default value 0 means no limit.
Warning Time (s)	The number of seconds before the maximum call duration is reached to play the warning tone to the caller.
Warning Repeat Interval (s)	The number of seconds that must pass after the first warning tone before another warning tone is played.
Enable 486 to Failover Trunk	Reroutes failed outbound calls that receive a 486 response through the failover trunk to retry the call. If disabled, calls that receive a 486 response will be

	terminated.
Record Prompt	If enabled, users will hear voice prompt before recording is started or stopped. For example, before recording, the FCM630A will play voice prompt "The call will be recorded". The default setting is "No".
Device Name	The name of the FCM you are using.
International Call Prefix	When this configuration is empty, International Call Prefix can be empty or +.
Meeting Max Concurrent Audio	Maximum number of participants that can be heard simultaneously in meetings. If the number of participants talking at any given point exceeds this value, the audio of the excess participants will not be heard.
Meeting Voice Indicator Sensitivity	Configures the sensitivity of the talking indicator in meetings. Setting this higher will make the talking indicator appear more easily for lower volumes of audio. Note: This does not adjust audio input sensitivity itself. Lower volumes of sounds may still be heard even if the talking indicator does not show the source.
Meeting Voice Quality	Voice quality of meetings.
Meeting AGC	During the recording process, the system automatically adjusts the volume according to the volume of the sound, so that the volume of the sound is as consistent as possible. Make it clearer and more pleasant to hear.

Extension Preferences

Enforce Strong Passwords	<p>If enabled, strong password will be enforced for the password created on the FCM630A. The default setting is "No".</p> <p style="text-align: center;">Strong Password Rules:</p> <ol style="list-style-type: none"> 1. Password for voicemail, voicemail group, outbound route, DISA, call queue and meeting require non-repetitive and non-sequential digits, with a minimum length of 4 digits. Repetitive digits pattern (such as 0000, 1111, 1234, 2345, and etc.), or common digits pattern (such as 111222, 321321 and etc.) are not allowed to be configured as password.
---------------------------------	--

"Enable Pick Extension". If "Enable Pick Extension" under zero config settings is selected, the extension list defined in "Pick Extension Segment" will be sent out to the device after receiving the device's request. This "Pick Extension Segment" should be a subset of the "Pick Extensions" range here.

- Auto Provision Extensions: 5000-6299

This sets the range for "Zero Config Extension Segment" which is the extensions can be assigned on the FCM630A to provision the end device.

- Meeting Extensions: 6300-6399
- Ring Group Extensions: 6400-6499
- Queue Extensions: 6500-6599
- Voicemail Group Extensions: 6600-6699
- IVR Extensions: 7000-7100
- Dial By Name Extensions: 7101-7199

PBX Settings/RTP Settings

RTP Settings

Table 92: Internal Options/RTP Settings

RTP Start	Configure the RTP port starting number. The default setting is 10000.
RTP End	Configure the RTP port ending address. The default setting is 20000.
Strict RTP	Configure to enable or disable strict RTP protection. If enabled, RTP packets that do not come from the source of the RTP stream will be dropped. The default setting is "Disable".

RTP Checksums	Configure to enable or disable RTP Checksums on RTP traffic. The default setting is "Disable".
ICE Support	Configure whether to support ICE. The default setting is enabled. ICE is the integrated use of STUN and TURN structure to provide reliable VoIP or video calls and media transmission, via a SIP request/ response model or multiple candidate endpoints exchanging IP addresses and ports, such as private addresses and TURN server address.
STUN Server	Configure STUN server address. STUN protocol is a Client/Server and also a Request/Response protocol. It is used to check the connectivity between the two terminals, such as maintaining a NAT binding entries keep-alive agreement. Valid format: [(hostname IP-address) [:' port] The default port number is 3478 if not specified.
BFCP UDP Start	Configure BFCP UDP port starting number. The default setting is 50000.
BFCP UDP End	Configure BFCP UDP port ending number. The default setting is 52999.
BFCP TCP Start	Configure BFCP TCP port starting number. The default setting is 53000.
BFCP TCP End	Configure BFCP TCP port ending number. The default setting is 55999.
TURN Server	Configure TURN server address. TURN is an enhanced version of the STUN protocol and is dedicated to the processing of symmetric NAT problems.
TURN Server Name	Configure turn server account name
TURN Server Password	Configure turn server account password.
Connection Protocol	Protocol used to connect to the TURN server.

Payload

The FCM630A payload type for audio codecs and video codes can be configured here.

Table 93: Internal Options/Payload

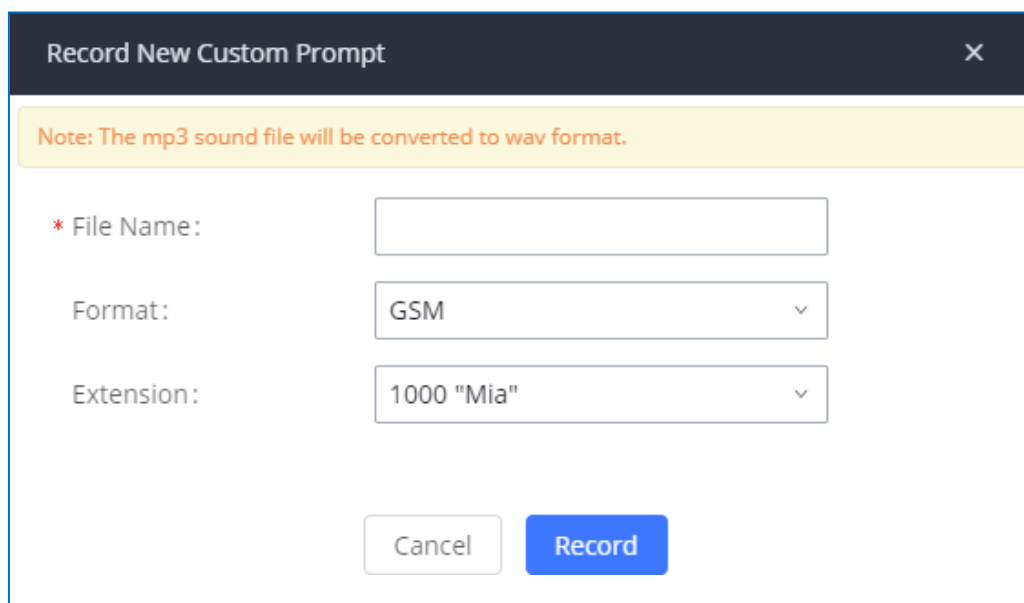

AAL2-G.726	Configure payload type for ADPCM (G.726, 32kbps, AAL2 codeword packing). The default setting is 112.
DTMF	Configured payload type for DTMF. The default setting is 101.
G.721 Compatible	Configure to enable/disable G.721 compatible. The default setting is Yes.
G.726	Configure the payload type for G.726 if "G.721 Compatible" is disabled. The default setting is 111.
iLBC	Configure the payload type for iLBC. The default setting is 97.
OPUS	Configure the payload type for OPUS. The default setting is 123.
Audio FEC PayloadType	Configure the Audio FEC Payload Type. The default setting is 127
Audio RED PayloadType	Configure the Audio RED Payload Type. Default setting is 122
H.264	Configure the payload type for H.264. The default setting is 99.
H.265	Configure the payload type for H.264. The default setting is 114.
H.263P	Configure the payload type for H.263+. The default setting is 100 103.
VP8	Configure the payload type for VP8. The default setting is 108.
Main Video FEC	Configure the Main Video FEC
RTP FECC	Configure the RTP FECC
RTX	Configure the RTX
G.722.1	G.722.1: Low-complexity coder, 24kbps.
G.722.1C	G.722.1C: Low-complexity coder, 48kbps.

PBX Settings/Voice Prompt Customization

Record New Custom Prompt

In the FCM630A Web GUI→**PBX Settings**→**Voice Prompt**→**Custom Prompt** page, click on “Record” and follow the steps below to record new IVR prompt.

Record New Custom Prompt

Note: The mp3 sound file will be converted to wav format.

* File Name:

Format:

Extension:

Cancel Record

Figure 188: Record New Custom Prompt

1. Specify the IVR file name.
2. Select the format (GSM or WAV) for the IVR prompt file to be recorded.
3. Select the extension to receive the call from the FCM630A to record the IVR prompt.
4. Click the “Record” button. A request will be sent to the FCM630A. The FCM630A will then call the extension for recording the IVR prompt from the phone.
5. Pick up the call from the extension and start the recording following the voice prompt.
6. The recorded file will be listed in the IVR Prompt web page. Users could select to re-record, play, or delete the recording.

Upload Custom Prompt

If the user has a pre-recorded IVR prompt file, click on “Upload” in Web GUI→PBX Settings→Voice Prompt→Custom Prompt page to upload the file to the FCM630A. The following are required for the IVR prompt file to be successfully uploaded and used by the FCM630A:

- PCM encoded.
- 16 bits.
- 8000Hz mono.
- In .mp3 or .wav format; or raw/ulaw/alaw/gsm file with .ulaw or .alaw suffix.
- File size under 5M.

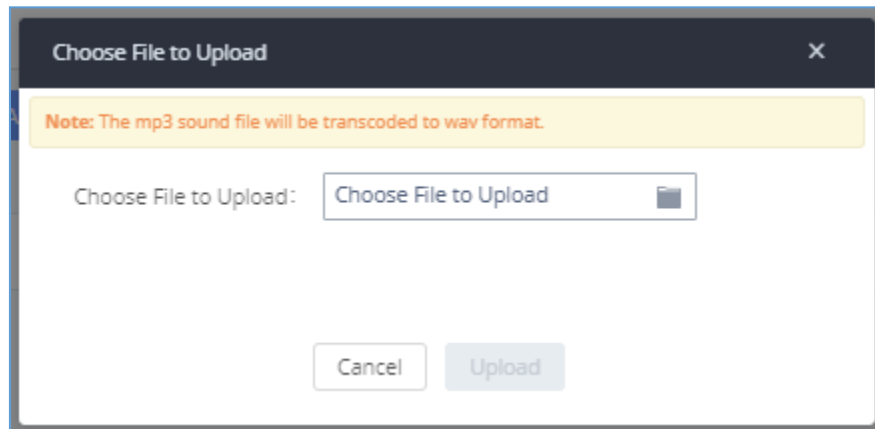

Figure 189: Upload Custom Prompt

Click on “choose file to upload” to start uploading. Once uploaded, the file will appear in the Custom Prompt webpage.

Download All Custom Prompt

On the FCM630A, the users can download all custom prompts from FCM Web GUI to local PC. To download all custom prompt, log in FCM Web GUI and navigate to PBX Settings→Voice Prompt→Custom Prompt and click on” Download All”. The following window will pop up in order to set a name for the downloaded file.

Figure 190: Download All Custom Prompt

Note: The downloaded file will have a .tar extension.

PBX Settings/ Call Failure Tone Settings

SIP Trunk Prompt Tone

Prompt Tone Settings tab has been added to the FCM to help users choose which prompt will be played by the FCM during call failure, the following voice message responses have been added and can be set to be played for 4XX, 5XX, and 6XX call failures:

- Default for 404 and 604 status codes: *“Your call can’t be completed as dialed. Please check the number and dial again.”*
- Default for 5xx status codes: *“Server error. Please check your device.”*
- Default for 403 and 603 status codes: *“The call was rejected by the server. Please try again later.”*
- Default for all other status codes: *“All circuits are busy now. Please try again later.”*

Additionally, custom voice messages recorded and uploaded in **PBX Settings**→**Voice Prompt**→**Custom Prompt** can be used for these failure responses instead of the default messages.

Call Failure Tone Settings

SIP Trunk Prompt Tone General Call Failure Tones

Specify the tones to play for various SIP trunk call failure scenarios.

Figure 192: General call Failure Prompts

PBX Settings/ File Storage Management

FCM supports automatic or manual recording of calls. Files are allowed to be saved in FCM local or external storage devices. Users can go to FCM630A Web GUI→PBXSettings→File Storage Management page and select whether to store the recording files in USB Disk, SD card or locally on the FCM630A.

File Storage Management

NTFS is the recommended file system for external storage devices.

Recording Files

Enable auto change:

Local:

Figure 193: Settings→ File Storage Management

- If **“Enable Auto Change”** is selected, the files will be automatically saved in the available USB Disk or SD card plugged into the FCM630A. If both USB Disk and SD card are plugged in, the files will be always saved in the USB Disk.
- If **“Local”** is selected, the files will be stored in FCM630A internal storage.
- If **“USB Disk”** or **“SD Card”** is selected, the files will be stored in the corresponding plugged in external storage device. Please note the options “USB Disk” and “SD Card” will be displayed only if they are plugged into the FCM630A.

Once “USB Disk” or “SD Card” is selected, click on “OK”. The user will be prompted to confirm to copy the local files to the external storage device.

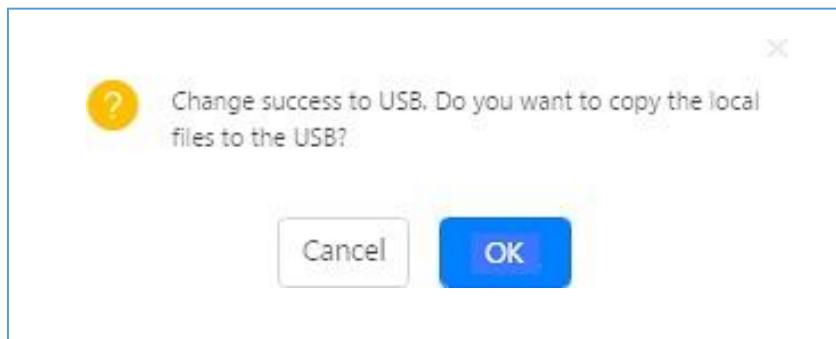

Figure 194: Recordings Storage Prompt Information

Click on “OK” to continue. The users will be prompted a new dialog to select the categories for the files to be copied over.

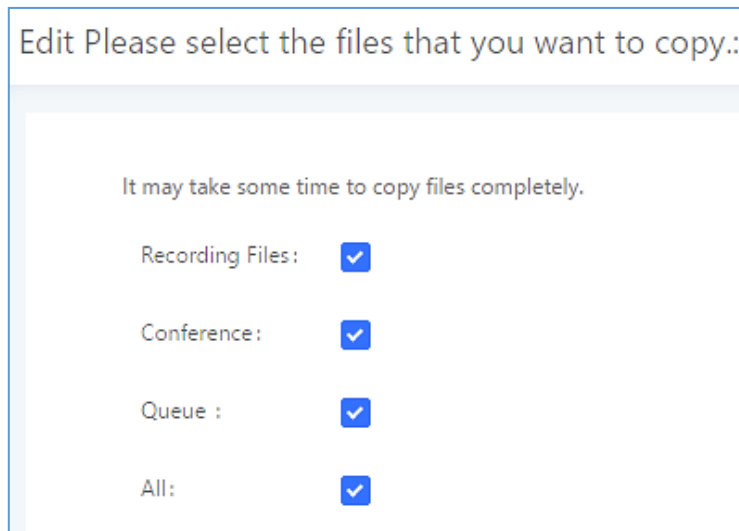

Figure 195: Recording Storage Category

On the FCM630A, users have the following options when select the categories to copy the files to the externaldevice:

- **Recording Files:** Copy the normal recording files to the external device.
- **Meeting:** Copy the meeting recording files to the external device.
- **Queue:** Copy the call queue recording files to the external device.
- **All:** Copy all recording files to the external device.

PBX Settings/NAS

The FCM supports adding and backing up recordings to a network-attached storage (NAS) server. Followingtable describes NAS settings:

Table 94: NAS Settings

Enable	Enabled / Disable the NAS recording functionality.
Host	Configure the Domain or IP address of the NAS server. Note: Currently, only IP addresses are supported in the Host/IP field.

Share Name	Specify the name of the shared folder.
Username	Specify the account username to access the NAS server.
Password	Configure the account password to access the NAS server.
Status	If configured correctly, the Status field will show "Mounted", and the newly added NAS server will be shown on the Mounted Netdisk List. Additionally, the NAS will appear as a selectable storage option in the PBX Settings→Recording Storage page and CDR→Recording Files page.

SIP SETTINGS

The FCM630A SIP global settings can be accessed via Web GUI→**PBX Settings**→**SIP Settings**.

SIP Settings/General

Table 95: SIP Settings/General

Realm For Digest Authentication	Configure the host name or domain name for the FCM630A. Realms MUST be globally unique according to RFC3261. The default setting is FIBERME.
Bind UDP Port	Configure the UDP port used for SIP. The default setting is 5060.
Bind IPv4 Address	Configure the IPv4 address to bind to. The default setting is 0.0.0.0, which means binding to all addresses.
Bind IPv6 Address	Configure the IPv6 address to bind to. The default is : "[::]" and it means to bind to all IP addresses.
Allow Guest Calls	<p>If enabled, the FCM630A allows unauthorized INVITE coming into the PBX and the call can be made. The default setting is "No".</p> <p>Warning:</p> <p>Please be aware of the potential security risk when enabling "Allow Guest Calls" as this will allow any user with the FCM630A address to dial into the FCM630A.</p>
Allow Transfer	If set to "No", all transfers initiated by the endpoint in the FCM630A will be disabled (unless enabled in peers or users). The default setting is "Yes".
MWI From	When sending MWI NOTIFY requests, this value will be used in the "From:" header as the "name" field. If no "From User" is configured, the "user" field of the URI in the "From:" header will be filled with this value.
Enable Diversion Header	If disabled, the FCM will not forward the diversion header.
Block Collect Calls	<p>If enabled, collect calls will be blocked.</p> <p>Note: Collect calls are indicated by the header "P-Asserted-Service-Info: service-code=Backward Collect Call, P-Asserted-Service-Info: service-code=Collect Call".</p>

Table 96: SIP Settings/Misc

Outbound SIP Registrations	
Register Timeout	Configure the register retry timeout (in seconds). The default setting is 20.
Register Attempts	Configure the number of registration attempts before the FCM630A gives up. The default setting is 0, which means the FCM630A will keep trying until the server side accepts the registration request.
Video	
Max Bit Rate (kb/s)	Configure the maximum bit rate (in kb/s) for video calls. The default setting is 384.
Support SIP Video	Select to enable video support in SIP calls. The default setting is "Yes".
Reject Non-Matching INVITE	If enabled, when rejecting an incoming INVITE or REGISTER request, the FCM630A will always reject with "401 Unauthorized" instead of notifying the requester whether there is a matching user or peer for the request. This reduces the ability of an attacker to scan for valid SIP usernames. The default setting is "No".
SDP Attribute Passthrough	
Enable Attribute Passthrough	If enable, and if the service does not know the attribute of FEC/FECC/BFCP, then the attribute will be passthrough.
Early Media	
Enable Use Final SDP	If enabled, call negotiation will use final response SDP.
Blind Transfer	
Allow callback when blind transfer fails	If enabled, the FCM will call back to the transferrer when blind transfer fails (reason of failure includes: busy and no answer). Note: This feature takes effect only on internal calls.

Blind transfer timeout	Configure the timeout in (s) for the transferrer waiting for the destination to answer. Default is 60s.
Hold	
Forward HOLD Requests	<p>Configure the FCM to forward HOLD requests instead of processing holds internally. This serves to meet the standards set by some providers that require HOLD requests to be passed along from endpoint to endpoint. This option is disabled by default.</p> <p>Note: Enabling this option may cause hold retrieval issues and MOH to not be heard.</p>

SIP Settings/Session Timer

Table 97: SIP Settings/Session Timer

Force Timer	If checked, always request, and run session timer.
Timer	If checked, run session timer only when requested by other UA.
Session Expire	Configure the maximum session refresh interval (in seconds). Default is 1800.
Min SE	Configure the minimum session refresh interval (in seconds). The default setting is 90.

SIP Settings/TCP and TLS

Table 98: SIP Settings/TCP and TLS

TCP Enable	Configure to allow incoming TCP connections with the FCM630A. The default setting is "Yes".
TCP Bind IPv4Address	Configure the IP address for TCP server to bind to. "0.0.0.0" means binding to all interfaces. The port number is optional, and the default port number is 5060. For example, 192.168.1.1:5062.
TCP Bind IPv6Address	Configure the IPv6 address for TCP server to bind to. "[::]" means bind to all interfaces. The port number is optional with the default being 5060. For example, [2001:0DB8:0000:0000:0000:0000:1428:0000]:5060.

TLS Enable	Configure to allow incoming TLS connections with the FCM630A. The default setting is "Yes".
TLS Bind IPv4Address	Configure the IPv4 address for TLS server to bind to. "0.0.0.0" means binding to all interfaces. The port number is optional, and the default port number is 5061. For example, 192.168.1.1:5063. Note: The IP address must match the common name (host name) in the certificate so that the TLS socket will not bind to multiple IP addresses.
TLS Bind IPv6Address	Configure the IPv6 address for TLS server to bind to. "[::]" means bind to all interfaces. The port number is optional with default being 5061. For example, [2001:0DB8:0000:0000:0000:0000:1428:0000]:5061. Note: The IP address must match the common name (host name) in the certificate so that the TLS socket will not bind to multiple IP addresses.
TLS Do Not Verify	If enabled, the TLS server's certificate will not be verified when acting as a client. The default setting is "Yes".
TLS Self-Signed CA	This is the CA certificate if the TLS server being connected to requires self-signed certificate, including server's public key. This file will be renamed as "TLS.ca" automatically. Note: The size of the uploaded ca file must be under 2MB.
TLS Cert	This is the Certificate file (*.pem format only) used for TLS connections. It contains private key for client and signed certificate for the server. This file will be renamed as "TLS.pem" automatically. Note: The size of the uploaded certificate file must be under 2MB.
TLS CA Cert	This file must be named with the CA subject name hash value. It contains CA's (Certificate Authority) public key, which is used to verify the accessed servers. Note: The size of the uploaded CA certificate file must be under 2MB.
TLS CA List	Display a list of files under the CA Cert directory.

SIP Settings/NAT

Table 99: SIP Settings/NAT

External Host	Configure a static IP address and port (optional) used in outbound SIP messages if the FCM630A is behind NAT. If it is a host name, it will only be looked up once.
Use IP address in SDP	If enabled, the SDP connection will use the IP address resolved from the external host.

External UDP Port	Configure externally mapped UDP port when the PBX is behind a static NAT or PAT.
External TCP Port	Configure the externally mapped TCP port when the FCM630A is behind a static NAT or PAT.
External TLS Port	Configures the externally mapped TLS port when FCM630A is behind a static NAT or PAT.
Local Network Address	<p>Specify a list of network addresses that are considered inside of the NAT network. Multiple entries are allowed. If not configured, the external IP address will not be set correctly.</p> <p>A sample configuration could be as follows:</p> <p style="text-align: center;">192.168.0.0/16</p>

SIP Settings/TOS

Table 100: SIP Settings/ToS

ToS for SIP	Configure the Type of Service for SIP packets. The default setting is None.
ToS for RTP Audio	Configure the Type of Service for RTP audio packets. The default setting is None.
ToS for RTP Video	Configure the Type of Service for RTP video packets. The default setting is None.
Default Incoming/Outgoing Registration Time	<p>Configure the default duration (in seconds) of incoming/outgoing registration.</p> <p style="text-align: center;">The default setting is 120.</p>
Max Registration/Subscription Time	Configure the maximum duration (in seconds) of incoming registration and subscription allowed by the FCM630A. The default setting is 3600.
Min Registration/Subscription Time	Configure the minimum duration (in seconds) of incoming registration and subscription allowed by the FCM630A. The default setting is 60.
Enable Relaxed DTMF	Select to enable relaxed DTMF handling. The default setting is "No".

DTMF Mode	Select DTMF mode to send DTMF. The default setting is RFC4733. If "Info" is selected, SIP INFO message will be used. If "Inband" is selected, a-law or u-law are required. When "Auto" is selected, "RFC4733" will be used if offered, otherwise "Inband" will be used. The default setting is "RFC4733".
RTP Timeout	During an active call, if there is no RTP activity within the timeout (in seconds), the call will be terminated. The default setting is no timeout. Note: This setting does not apply to calls on hold.
RTP Hold Timeout	When the call is on hold, if there is no RTP activity within the timeout (in seconds), the call will be terminated. This value of RTP Hold Timeout should be larger than RTP Timeout. The default setting is no timeout.
RTP Keep-alive	This feature can be used to avoid abnormal call drop when the remote provider requires RTP traffic during proceeding. For example, when the call goes into voicemail and there is no RTP traffic sent out from FCM, configuring this option can avoid voicemail drop. When configured, RTP keep-alive packet will be sent to remote party at the configured interval. If set to 0, RTP keep-alive is disabled.
100rel	Configure the 100rel setting on FCM630A. The default setting is "Yes".
Trust Remote Party ID	Configure whether the Remote-Party-ID should be trusted. The default setting is "No".
Send Remote Party ID	Configure whether the Remote-Party-ID should be sent or not. The default setting is "No".
Generate In-Band Ringing	Configure whether the FCM630A should generate Inband ringing or not. The default setting is "Never". <ul style="list-style-type: none"> • Yes: The FCM630A will send 180 Ringing followed by 183 Session Progress and in-band audio. • No: The FCM630A will send 180 Ringing if 183 Session Progress has not been sent yet. If audio path is established already with 183 then send in-band ringing. • Never: Whenever ringing occurs, the FCM630A will send 180 Ringing as long as 200OK has not been set yet. Inband ringing will not be generated even the end point device is not working properly.

Server User Agent	Configure the user agent string for the FCM630A.
Send Compact SIP Headers	If enabled, compact SIP headers will be sent. The default setting is "No".
Passthrough PAI Header	Passthrough PAI Header

SIP Settings/STIR/SHAKEN

To prevent robocalls, FCM now supports STIR/SHAKE protocols. Related options have been added as a new tab in the SIP Settings page.

<p>Device Name</p>	<p>Configure the device name.</p>
<p>Creditability</p>	<p>Configure the attestation level, which is the level of confidence of the carrier that the CID has not been spoofed. The following options are available:</p> <ul style="list-style-type: none"> • A (Full attestation) - The carrier is associated with the caller and the number. There is high confidence that the CID has not been spoofed. • B (Partial attestation) - The carrier is associated with the caller but not the number. There is uncertainty about whether the CID has been spoofed or not. • C (Gateway attestation) - The carrier is not associated with the caller and has no confidence at all about the number. Generally used for traceback.

Clicking on the **Certificate Settings** button will bring up the following window:

Figure 197: SIP Settings/STIR/SHAKEN – Certificate Settings

Table 102: SIP Settings/STIR/SHAKEN – Certificate Settings

Certificate Download Time (s)	Configure the public key download timeout period, the default value is 2 seconds.
Signature Valid Time (s)	Configure the validity period of the digital signature, the default value is 15 seconds.
Private Key	Configure the Private key. Note: The uploaded file must be less than 2MB in file size, only supports the .key format and must be ECC type. This file will automatically be renamed to "private.key".
Public Key	Configure the Public Key. Note: The uploaded file must be less than 2MB in file size, only supports the .crt format and must be ECC type. This file will automatically be renamed to "public.crt".

IAX SETTINGS

The FCM630A IAX global settings can be accessed via Web GUI→**PBX Settings**→**IAX Settings**.

IAX Settings/General

Table 103: IAX Settings/General

Bind Port	Configure the port number that the IAX2 will be allowed to listen to. The default setting is 4569.
Bind IPv4 Address	Force IAX2 to bind to a specific address instead of all addresses.
Bind IPv6 address	Configure the IPv6 address to bind to. "[::]" means to bind to all IP addresses.
IAX1 Compatibility	Select to configure IAX1 compatibility. The default setting is "No".
No Checksums	If selected, UDP checksums will be disabled and no checksums will be calculated/checked on systems supporting this feature. The default setting is "No".
Delay Reject	If enabled, the IAX2 will delay the rejection of calls to avoid DOS. The default setting is "No".
ADSI	Select to enable ADSI phone compatibility. The default setting is "No".
Music On Hold Interpret	Specify which Music On Hold class this channel would like to listen to when being put on hold. This music class is only effective if this channel has no music class configured and the bridged channel putting the call on hold has no "Music On Hold Suggest" setting.
Music On Hold Suggest	Specify which Music On Hold class to suggest to the bridged channel when putting the call on hold.
Bandwidth	Configure the bandwidth for IAX settings. The default setting is "Low".

IAX Settings/Registration

Table 104: IAX Settings/Registration

IAX Registration Options	
Min Reg Expire	Configure the minimum period (in seconds) of registration. The default setting is 60.
Max Reg Expire	Configure the maximum period (in seconds) of registration. The default setting is 3600.
IAX Thread Count	Configure the number of IAX helper threads. The default setting is 10.
IAX Max Thread Count	Configure the maximum number of IAX threads allowed. The default is 100.
Auto Kill	If enabled and no ACK is received for new messages after the specified wait time, the connection will be terminated.
Authentication Debugging	If enabled, authentication traffic in debugging will not show. The default is "No".
Codec Priority	<p>Configure codec negotiation priority. The default setting is "Reqonly".</p> <ul style="list-style-type: none"> • Caller Consider the callers preferred order ahead of the host's. • Host Consider the host's preferred order ahead of the caller's. • Disabled Disable the consideration of codec preference all together. • Reqonly This is the same as "Disabled", except when the requested format is not available. The call will only be accepted if the requested format is available.
Type of Service	Configure ToS bit for preferred IP routing.
IAX Trunk Options	
Trunk Frequency	Configure the frequency of trunk frames (in milliseconds). The default is 20.
Trunk Time Stamps	If enabled, time stamps will be attached to trunk frames. The default is "No".

IAX Settings/Security

Table 105: IAX Settings/Static Defense

Call Token Optional	Enter a single IP address (e.g., 1.1.1.1) or a range of IP addresses (1.1.1.1/255.255.255.255) for which call token validation is not required.
Max Call Numbers	Configure the maximum number of calls allowed for a single IP address.
Max Unvalidated Call Numbers	Configure the maximum number of Unvalidated calls for all IP addresses.
Max Call Numbers	Configure to limit the number of calls for a give IP address of IP range.
IP or IP Range	Enter the IP address (1.1.1.1) or a range of IP addresses (1.1.1.1/255.255.255.255) to be considered for call number limits.

API CONFIGURATION

The FCM630A supports third party billing interface API for external billing software to access CDR and call recordings on the PBX. The API uses HTTPS to request the CDR data and call recording data matching given parameters as configured on the third-party application.

API Configuration Parameters

Before accessing the API, the administrators need enable API and configure the access/authentication information on the FCM630A first under Value-added Features→API Configuration. The API configuration parameters are listed in the table below.

Note: The old version of the API interface only supports cdrapi, recapi and pmsapi functions, and will be removed, please use the new HTTPS API instead.

Table 106: Configuration Parameters (New)

HTTPS API Settings (New)	
Enable	Enable/Disable API. The default setting is enable.
Username	Configure the username for API Authentication.
Password	Configure the password for API Authentication.
Call Control	If enabled, 3 rd party applications will be able to manage inbound calls via API actions. acceptCall will accept incoming calls while refuseCall will reject them. If no actions are done within 10 seconds, calls will automatically be accepted.
Permitted IP (s)	Sets an IP address Access Control List (ACL) for addresses that are allowed to authenticate as this user. By default this is not set, meaning all IP addresses will be allowed. The format is: "xxx.xxx.xxx.xxx/255.255.255.255".

Table 107: Configuration Parameters (Old)

HTTPS API Settings (Old)
Basic Settings

Enable	Enable/Disable API. The default setting is disabled.
TLS Bind Address	<p>Configure the IP address for TLS server to bind to. "0.0.0.0" means binding to all interfaces. The port number is optional, and the default port number is 8443. The IP address must match the common name (host name) in the certificate so that the TLS socket will not bind to multiple IP addresses.</p> <p>The default setting is 0.0.0.0:8443.</p>
Username	Configure the username for TLS authentication.
Password	Configure the password for TLS authentication.
Permitted IP(s)	<p>Specify a list of IP addresses permitted to use the API. This creates an API-specific access control list. Multiple entries are allowed.</p> <p>For example, "192.168.40.3/255.255.255.255" denies access from all IP addresses except 192.168.40.3.</p> <p>By default, this is blank, which indicates that no IP addresses are allowed to use this API.</p>
Other Settings	
TLS Private Key	Upload TLS private key. The size of the key file must be under 2MB. This file will be renamed as 'private.pem' automatically.
TLS Cert	Upload TLS cert. The size of the certificate must be under 2MB. This is the certificate file (*.pem format only) for TLS connection. This file will be renamed as "certificate.pem" automatically. It contains private key for the client and signed certificate for the server.
API Module	
CDR API	Enable/disable CDR API module.
REC API	Enable/disable REC API module.
PMS API	Enable/disable PMS API module.

For more details on CDR API (Access to Call Detail Records), REC API (Access to Call Recording Files) and

PMS API, please refer the document in the link here:

Table 109: API Configuration Parameters

CDR Real-time Output Settings	
Enable	Enables real-time CDR output module. This module connects to selected IP addresses and ports and posts CDR strings as soon as it is available.
Server Address	CDR server IP address

Port	CDR server IP port
Upload Prompts User Configuration	
Username	Username used to upload prompts.
Password	Password used to upload prompts.

Upload Voice Prompt via API

Customers now can use the “Upload Prompts User Configuration” to upload/replace voice prompt files as an alternative method to the manual upload method on FCM PBX Settings → Voice Prompt → Custom Prompt.

The workflow of the prompt file upload goes as:

An HTTP/HTTPS request is sent to the FCM to upload/replace a voice prompt file, the request should include authentication details to the FCM and the name of the file to be uploaded. Then the FCM will contact an FTP server that should be hosted on the same IP address of the HTTP/HTTPS requester and download the prompt file from the FTP server.

The steps and conditions to upload the voice prompt via API are listed below:

1. Configure the prompt User under **value-added Features** → **API Configuration** → **Upload Prompts User Configuration**. By default, the username and password for voice prompt user are “Username: uploader; Password: uploader123”.

API Configuration

< HTTPS API Settings(Old) CDR Real-time Output Settings Upload Prompts User Configuration >

Cancel Save

Upload Prompts User Configuration

* Username:

* Password:

Figure 198: Upload Prompt User Configuration

2. Hash the password of the user configured to an MD5 Encryption format.
3. Set the permission on the FTP server to Anonymous on the local computer hosting the FTP server and make sure that the default FTP port 21 is used.

4. Send an HTTP/HTTPS command to trigger the Prompt file upload on the FCM. If FCM's HTTP server is set to HTTPS, the example of the request sent to the FCM is:

<https://192.168.124.89:8089/cgi?action=uploadprompt&username=uploader&password=9191a6394c21b3aabd779213c7179462&filename=test.mp3>

If FCM's HTTP server is set to HTTP, the example of the request sent to the FCM is:

<http://192.168.124.89:8089/cgi?action=uploadprompt&username=uploader&password=9191a6394c21b3aabd779213c7179462&filename=test.mp3>

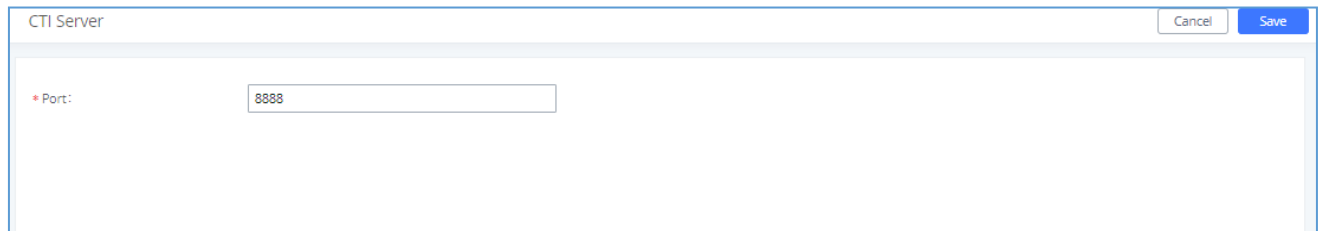

Note: If the File name on the HTTP/HTTPS request exists already on the FCM's Custom voice prompts list the existing file will be overwritten by the new file downloaded from the FTP server.

CTI SERVER

FCM does support CTI server capabilities which are designed to be a part of the CTI solution suite provided by FIBERME.

Users can change the listening port under the menu page, Web GUI → **Value-added Features** → **CTI Server** as shown on below screenshot:

The screenshot shows a web browser window titled "CTI Server". In the top right corner, there are "Cancel" and "Save" buttons. The main content area contains a label "* Port:" followed by a text input field containing the number "8888".

Figure 199: CTI Server Listening port

ASTERISK MANAGER INTERFACE (RESTRICTED ACCESS)

The FCM630A supports Asterisk Manager Interface (AMI) with restricted access. AMI allows a client program to connect to an Asterisk instance commands or read events over a TCP/IP stream. It is particularly useful when the system admin tries to track the state of a telephony client inside Asterisk.

User could configure AMI parameters on FCM630A Web GUI→**Value-added Features**→**AMI**. For details on how to use AMI on FCM630A, please refer to the following AMI guide:

http://download.fiberme.com/docs/FCM630A_AMI_Guide.pdf

 **Warning:**

Please do not enable AMI on the FCM630A if it is placed on a public or untrusted network unless you have taken steps to protect the device from unauthorized access. It is crucial to understand that AMI access can allow AMI user to originate calls and the data exchanged via AMI is often very sensitive and private for your FCM630A system. Please be cautious when enabling AMI access on the FCM630A and restrict the permission granted to the AMI user. By using AMI on FCM630A you agree you understand and acknowledge the risks associated with this.

CRM INTEGRATION

Customer relationship management (CRM) is a term that refers to practices, strategies and technologies that companies use to manage and analyze customer interactions and data throughout the customer lifecycle, with the goal of improving business relationships with customers.

The FCM630A support the following CRMs: SugarCRM, vTigerCRM, ZohoCRM, Salesforce CRM and ACT! CRM, which allows users to look for contact information in the Contacts, Leads and / or Accounts tables, show the contact record in CRM page, and saves the call information in the contact's history.

SugarCRM

Configuration page of the SugarCRM can be accessed via admin login, on the FCM WebGUI → **Value-added Features** → **CRM**.

Figure 200: SugarCRM Basic Settings

1. Select “SugarCRM” from the CRM System Dropdown in order to use SugarCRM.

Table 110: SugarCRM Settings

CRM System	Select a CRM system from the dropdown menu, four CRM systems are available: SugarCRM, vTigerCRM, ZohoCRM (v1&v2), Salesforce and ACT! CRM.
CRM Server Address	Enter the IP address of the CRM server.

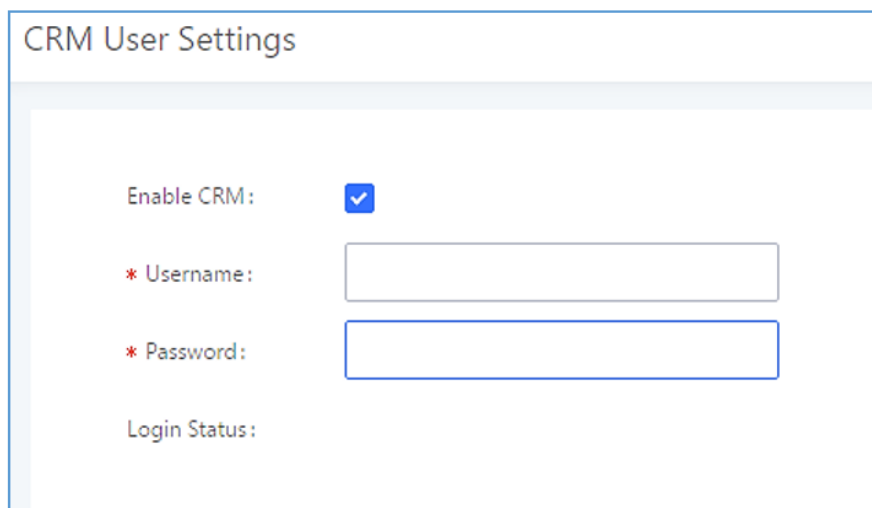

Add Unknown Number	Add the new number to this module if it cannot be found in the selected module.
Contact Lookups	Select from the “ Available ” list of lookups and press   to select where the FCM can perform the lookups on the CRM tables, Leads, Accounts, and Contacts.

Once settings on admin access are configured:

2. Click on  and .
3. Logout from admin access.
4. Login to the FCM as user and navigate under “User Portal→Value-added Feature→CRM User Settings”.

Click on “**Enable CRM**” and enter the username/password associated with the CRM account then click on

 and . The status will change from “Logged Out” to “Logged In”. User can start then using SugarCRM features.

The screenshot shows the 'CRM User Settings' form. It includes a title bar 'CRM User Settings' and a light blue header. The form contains the following fields:

- Enable CRM:** A checkbox that is checked with a blue checkmark.
- * Username:** A text input field with a red asterisk indicating it is required.
- * Password:** A text input field with a red asterisk indicating it is required.
- Login Status:** A label for the status field, which is currently empty.

Figure 201: CRM User Settings

VTigerCRM

Configuration page of the vTigerCRM can be accessed via admin login, on the FCM WebGUI→**Value-addedFeatures**→**CRM**.

Figure 202: vTigerCRM Basic Settings

1. Select “vTigerCRM” from the CRM System Dropdown in order to use vTigerCRM.

Table 111: vTigerCRM Settings

CRM System	Select a CRM system from the dropdown menu, four CRM systems are available: SugarCRM, vTigerCRM, ZohoCRM (v1&v2), Salesforce and ACT! CRM.
CRM Server Address	Enter the IP address of the CRM server.
Add Unknown Number	Add the new number to this module if it cannot be found in the selected module.
Contact Lookups	Select from the “ Available ” list of lookups and press   to select where the FCM can perform the lookups on the CRM tables, Leads, Organizations, and Contacts.

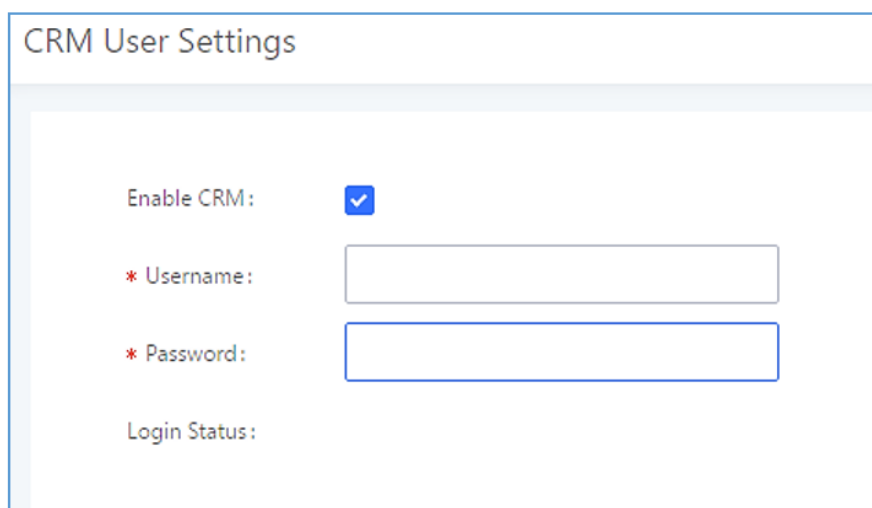

Once settings on admin access are configured:

2. Click on and .
3. Logout from admin access.
4. Login to the FCM as user and navigate under “User Portal→Value-added Feature→CRM User Settings”.

Click on “**Enable CRM**” and enter the username/password associated with the CRM account then click on

and . The status will change from “Logged Out” to “Logged In”. User can start then using SugarCRM features.

Figure 204: ZohoCRM Basic Settings

1. Select “ZohoCRM” from the CRM System Dropdown in order to use ZohoCRM.

Table 112: ZohoCRM Settings

CRM System	Select a CRM system from the dropdown menu, four CRM systems are available: SugarCRM, vTigerCRM, ZohoCRM (v1&v2), Salesforce and ACT! CRM.
CRM Server Address	Enter the IP address of the CRM server.
Add Unknown Number	Add the new number to this module if it cannot be found in the selected module.
Contact Lookups	Select from the “ Available ” list of lookups and press to select where the FCM can perform the lookups on the CRM tables, Leads, Accounts, and Contacts.

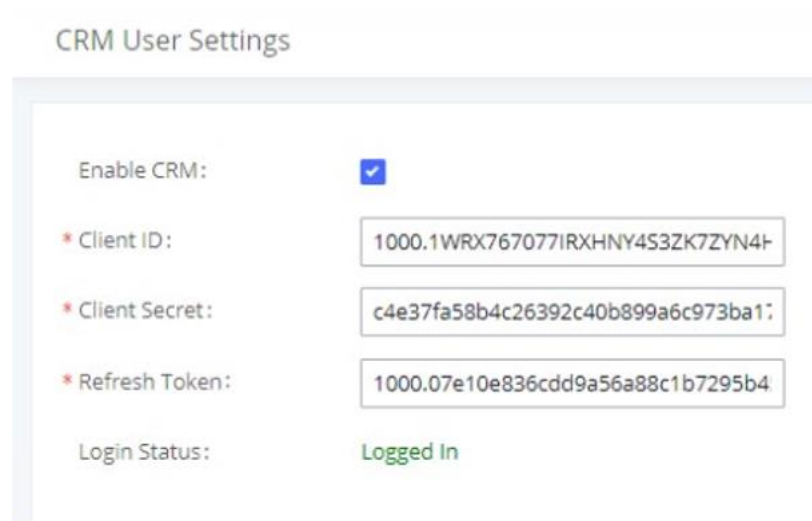

Once settings on admin access are configured:

2. Click on **Save** and **Apply Changes**.
3. Logout from admin access.
4. Login to the FCM as user and navigate under “User Portal→Value-added Feature→CRM User Settings”.

Click on “**Enable CRM**” and enter the username/password associated with the CRM account then click on

Save and **Apply Changes**. The status will change from “Logged Out” to “Logged In”. User can start then using Zoho CRM features.

The screenshot shows the 'CRM User Settings' interface. It includes a section for 'Enable CRM' with a checked checkbox. Below this are three input fields for 'Client ID', 'Client Secret', and 'Refresh Token', each containing a long alphanumeric string. At the bottom, the 'Login Status' is displayed as 'Logged In' in green text.

Field	Value
Enable CRM:	<input checked="" type="checkbox"/>
* Client ID:	1000.1WRX7670771RXHNY453ZK7ZYN4+
* Client Secret:	c4e37fa58b4c26392c40b899a6c973ba1;
* Refresh Token:	1000.07e10e836cdd9a56a88c1b7295b4
Login Status:	Logged In

* Password: pjdajdlka123@!

* Security Token: mkjhamjkhndfjkeFZEfljxwa!@jkjhbamklcel

Login Status:

Figure 207: Salesforce User Settings

ACT! CRM

Configuration page of the ACT! CRM can be accessed via admin login, on the FCM Web GUI→Value-added Features→CRM”.

The configuration steps of the ACT! CRM are as follows:

1. Navigate to **Value-Added Features→CRM** and select the “ACT! CRM” option.

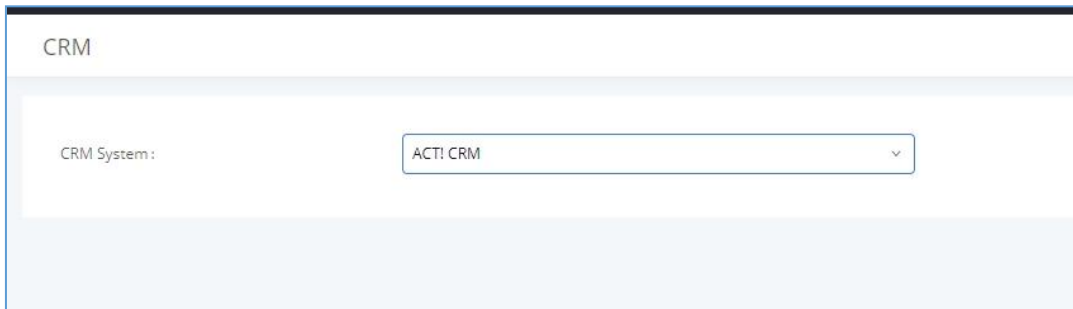

A screenshot of a web interface showing a dropdown menu for 'CRM System'. The menu is open, and 'ACT! CRM' is selected. The interface has a light blue header with the text 'CRM' and a light blue background for the dropdown options.

Figure 208: Enabling ACT! CRM

2. Log into the FCM as a regular user and navigate to **Value-Added Features**→**CRM User Settings** and check “Enable CRM” option and enter the username and password, which will be the ACT! CRM account’s **API Key** and **Developer Key**, respectively. To obtain these, please refer to the ACT! CRM API developer’s guide here: <https://mycloud.act.com/act/Help>

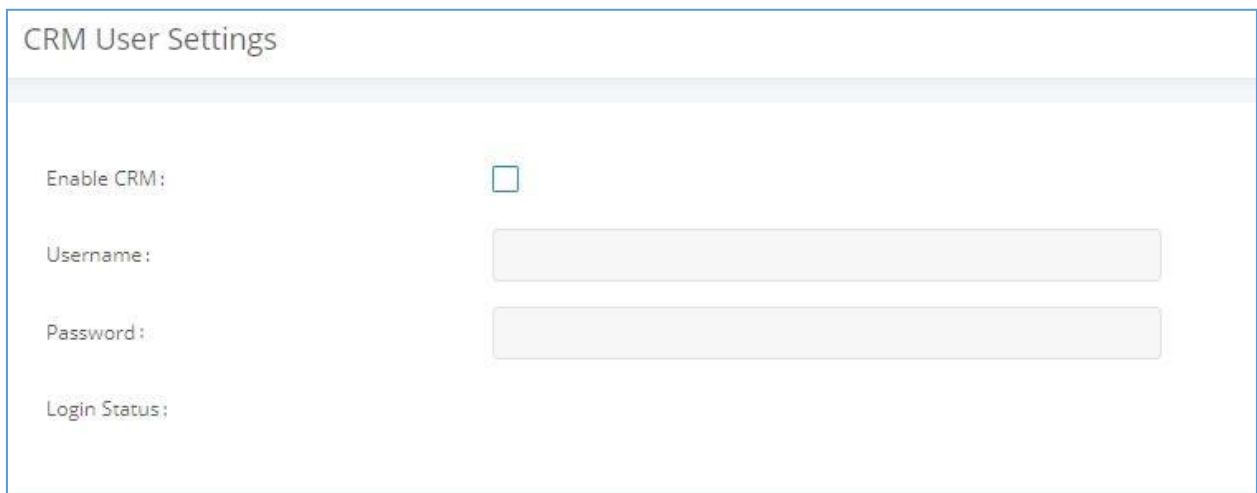

A screenshot of the 'CRM User Settings' form. The form has a light blue header with the text 'CRM User Settings'. Below the header, there are four fields: 'Enable CRM:' with an unchecked checkbox, 'Username:' with a text input field, 'Password:' with a text input field, and 'Login Status:' with a text input field.

Figure 209: Enabling CRM on the User Portal

Note: For more information on the ACT! CRM integration, please refer to the ACT! CRM documentation on our website.

PMS INTEGRATION

FCM630A supports Hotel Property Management System PMS, including check-in/check-out services, wakeupcalls, room status, Do Not Disturb which provide an ease of management for hotel applications. This feature can be found on Web GUI→Value-added Features→PMS.

Note: The PMS integration on FCM is currently supported only with one of the three following solutions. The

PMS module built-in the FCM supports the following features based on each solution:

Table 114: PMS Supported Features

Feature	Mitel	HMobile	HSC	IDS
Check-In	✓	✓	X	✓
Check-out	✓	✓	X	✓
Wake-up Call	✓	✓	X	✓
Name Change	✓	X	✓	X
Update	X	✓	X	✓
Set Credit	✓	X	X	X
Set Station Restriction	✓	X	✓	X
Room Status	X	✓	X	✓
Room Move	X	✓	X	✓
Do Not Disturb	X	✓	✓	X
Mini Bar	X	✓	X	✓
MSG	X	✓	X	X
MWI	X	X	✓	X
Unconditional Call Forward	X	X	✓	X

HMobile PMS Connector

In this mode, the system can be divided into three parts:

- PMS (Property Management System)
- PMSI (Property Management System Interface)
- PBX

FIBERME FCM630A has integrated HMobile Connect PMSI which supports a large variety of PMS software providing following hospitality features: Check-in, Check-out, set Room Status, Wake-up call and more.

The following figure illustrates the communication flow between the FCM and PMS software, which is done through a middleware system (HMobile Connect) acting as interface between both parties.

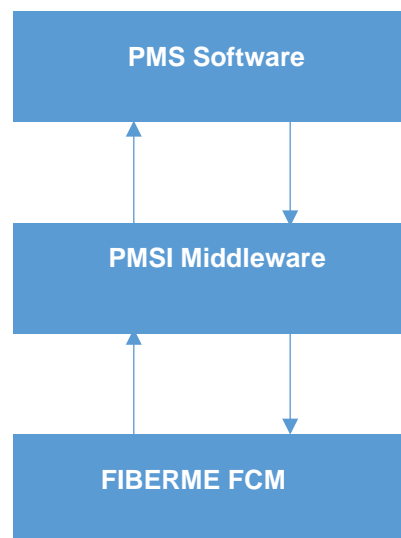

Figure 210: FCM & PMS interaction

HSC PMS

In this mode, the system can be divided into two parts:

- PMS (Property Management System)
- PBX

FIBERME FCM630A has integrated HSC PMS providing following features:

- Changing Display Name
- Set Station Restriction
- Call forwarding
- DND
- Name Change
- MWI

Note:

1. Added support for receiving HTTP GET keep-alive messages from HSC PMS. This will allow the PMS to be aware of its connection to the FCM and take the appropriate actions such as raising alarms, sending notifications, etc.
2. Added support for HTTP GET requests from HSC PMS to retrieve FCM extension information. FCM can provide the following information:
 - extension – FCM extension number
 - name – extension display name / CID name
 - mwi – MWI state
 - permission – permission level of the extension
 - cfw – call forwarding always number
 - dnd – DND state
 - language – display language of the extension in ISO 639-1 format

The FCM should respond with either 200 OK or 404 responses.

3. Added HTTPS support

The following figure illustrates the communication flow between the PBX (FIBERME FCM630A) and PMS software (HSC). The communication between both parties is direct with no middleware.

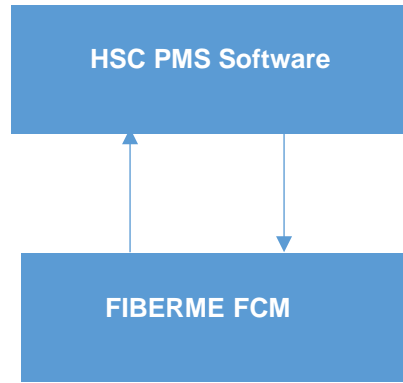

Figure 211: FCM & HSC PMS interaction

Mitel PMS

In this mode, the system can be divided into two parts:

- PMS (Property Management System)
- PBX

FIBERME FCM630A has integrated Mitel PMS providing following hospitality features: Check-in, Check-out, set Room Status, Wake-up call and more.

The following figure illustrates the communication flow between the PBX (FIBERME FCM630A) and PMS software (Mitel). The communication between both parties is direct with no middleware.

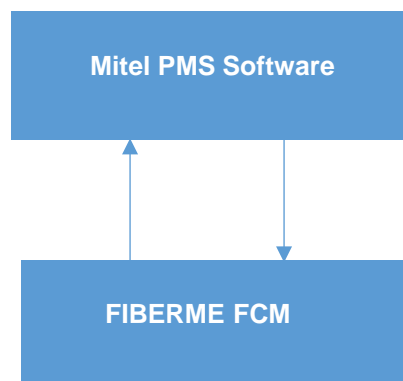

Figure 212: FCM & Mitel PMS interaction

IDS PMS

In this mode, the system can be divided into two parts:

- PMS (Property Management System)
- PBX

The FIBERME FCM630A integrates IDS PMS to set room status, Mini Bar, wake up calls, activate/deactivate dialing permissions, and more.

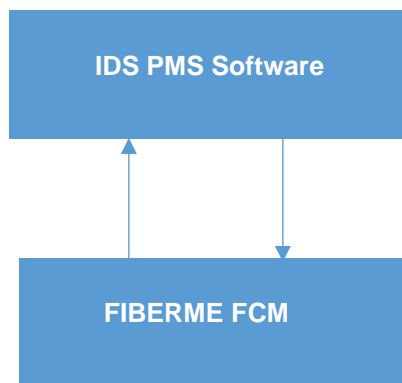

Figure 213: FCM & IDS PMS interaction

PMS API

The PMS API allows users to use their own middleware to work with PMS systems instead of currently supported integrations.

Additionally, this API allows access to read and modify certain FCM parameters that current supported PMS integrations cannot. To use this, users must first enable and configure the HTTPS API settings.

For more details, please refer to online [HTTPS API](#), Pmsapi section.

Connecting to PMS

On the FCM WebGUI → **Value-added Features** → **PMS** → **Basic Settings**” set the connection information for the PMS platform.

Table 115: PMS Basic Settings

Field	Description
PMS Module	Users can select the desired PMS module from the drop-down list. <ul style="list-style-type: none"> • Hmobile. • Mitel. • HSC. • IDS. • PMS API.
Wakeup Prompt	Prompt used when answering the wakeup calls it can be customized from “PBX Settings→Voice Prompt→Custom Prompt.”
PMS URL	Enter the PMS system URL
FCM Port	Enter the Port used by the PMS system
Username	Enter the Username to connect to the PMS system
Password	Enter the password to connect to the PMS system
Site	Enter PMS site
Back Up Voicemail Recordings	If enabled, this option allows backing up voicemail recordings to external storage after check-out. Note: This option is available only when the PMS Module is set to PMS API.
Email address	Email address to send voicemail recordings to upon backup.

In order to use some PMS features please activate the feature code associated under **“Call Features→FeatureCodes”**

- Update PMS Room Status
- PMS Wake Up Service

PMS Features

Room Status

User can create Rooms by clicking on "Add Room", the following Figure will be displayed then.

Create New Room

* Address:

* Room Number:

* Extension:

Guest Account:

Guest Category Code:

Guest Credit Money:

Maid Code:

Arrival Date:

Departure Date:

Figure 214: Create New Room

Click “Save” to create the new room, the fields above can be configured from the PMS platform, once set the following screen will be shown:

PMS

Basic Settings **Room Status** Wakeup Service Mini Bar Maid

[+ Add Room](#) [Delete Selected Rooms](#) [+ Batch Add Rooms](#)

<input type="checkbox"/>	ADDRESS	ROOM NUMBER	EXTENSION	ROOM STATUS	USER NAME	GUEST CATEGORY CODE	ARRIVAL DATE	DEPARTURE DATE	OPTIONS
<input type="checkbox"/>	1000	1000	1000	Check-out					✎ ✖

Total: 1 / page Goto

User can create a batch of rooms as well by clicking on [+ Batch Add Rooms](#), the following window will pop up:

Batch Add Rooms

* Start Address Number:

* Start Room Number:

* Start Extension:

* Create Number:

Figure 216: Add batch rooms

Wake Up Service

In order to create a New Wake up service, user can click on "Add", the following window will pop up:

Create New Wakeup Service

* Room Number:

* Select Time:

* Action Status:

Type:

Figure 217: Create New Wake Up Service

Table 116: PMS Wake up Service

Field	Description
Room Number	Select the room number where to call with a limitation of 63 characters.
Select Time	Set the time of the wakeup call
Action Status	Show the status of the call: <ul style="list-style-type: none"> <u>Programmed</u>: the call is scheduled for the time set

	<ul style="list-style-type: none"> • <u>Cancelled</u>: the call is canceled • <u>Executed</u>: the wakeup call is made <p>Note: Editing an already executed wakeup service will automatically change the</p>
Type	<ul style="list-style-type: none"> • <u>Single</u>: The call will be made once on the specific time. • <u>Daily</u>: The call will be repeated every day on the specific time

Once the call is made on the time specified, the following figure show the status of the wakeup call.

ROOM NUMBER	ACTION STATUS	TYPE	ANSWER STATUS	DATE	TIME	OPTIONS
1000	Programmed	Single	No action	2019-12-12	08:00	 

Figure 218: Wakeup Call executed

This call has been executed but has been rejected, that why we can see the **“Busy”** status.

Mini Bar

In order to create a new mini bar, click on “Add Mini Bar” under FCM WebGUI→**Value-added Features**→**PMS**→**Mini Bar**, the following window will pop up:

Create New Mini Bar

* Code:

* Name:

* Prompt:

Skip Maid and Password

Authentication:

Enable Continuous Multi Goods

Billing:

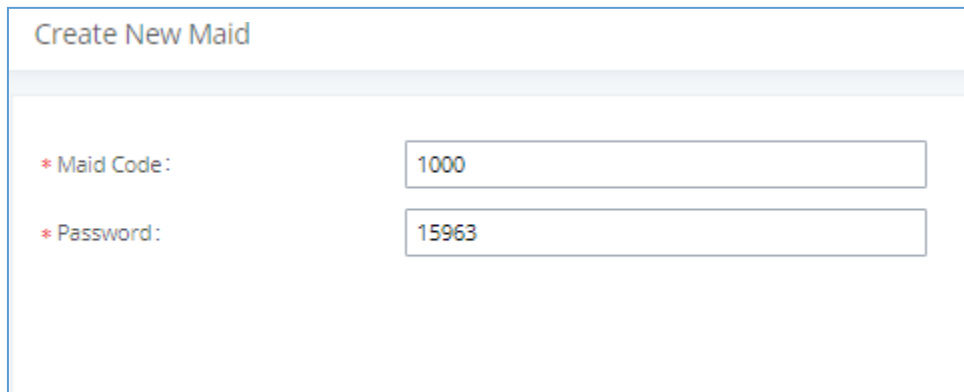

Figure 219: Create New Mini Bar

Table 117: Create New Mini Bar

Code	Enter a non-existing extension number to be dialed when using the mini bar feature.
Name	Enter a name for the mini bar.
Prompt	Select the Prompt to play once connected to the mini bar.
Skip Maid and Password Authentication	If enabled, the default maid code will be 0000, no authentication is required. (Enter 0000 followed by # to access the consumer goods)
Enable Continuous Multi Goods Billing	If enabled, please separate the goods' codes by*.

In order to create a new maid, click on [+ Create New Maid](#) under FCM WebGUI → **Value-added Features** → **PMS** → **Maid**.

The screenshot shows a web form titled "Create New Maid". It contains two input fields: "Maid Code" with the value "1000" and "Password" with the value "15963". Each field is preceded by a red asterisk indicating a required field.

Figure 220: Create New Maid

Table 118: Create New Maid

Maid Code	Enter the Code to use when the maid wants to use the Mini Bar.
Password	Enter the password associated with the maid.

In order to create a new consumer goods, click on [+ Create New Consumer Goods](#) under FCM WebGUI→**Value-added Features**→**PMS**→**Mini Bar**, the following window will popup.

Create New Consumer Goods

* Code:

* Name:

Figure 221: Create New Consumer Goods

Code	Enter the Goods Code.
Name	Enter the Name of the Goods

Figure 222: Mini Bar

WAKEUP SERVICE

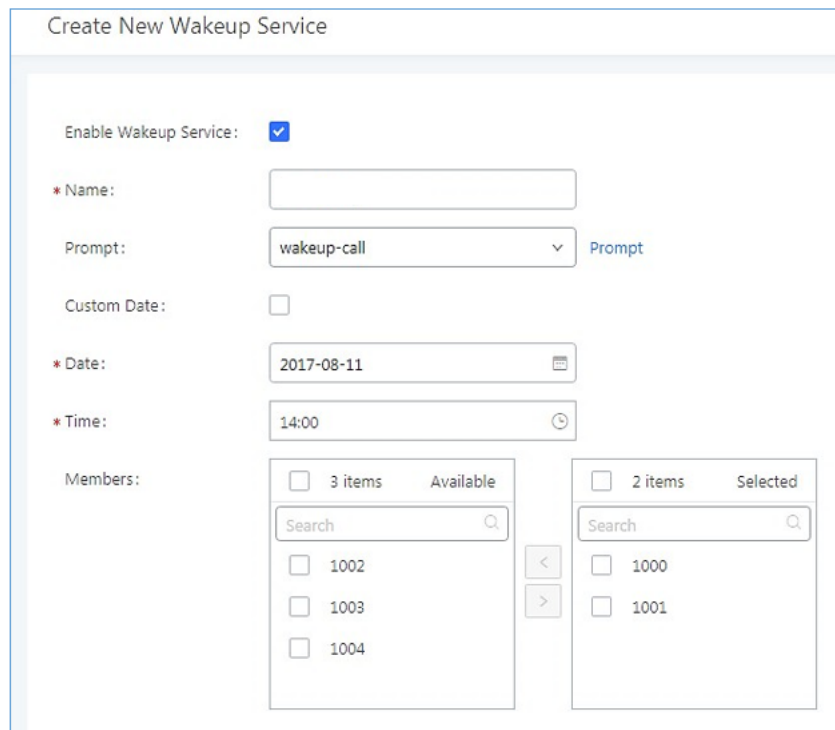

The Wake Up service can be used to schedule a reminder or wake up calls to any valid destination. This service is available on the FCM630A as a separated module.

There are three ways to set up Wakeup Service:

- Using admin login
- Using user portal
- Using feature code

Wake Up Service using Admin Login

1. Login to the FCM as admin.
2. Wake Up service can be found under Web GUI → **Value-added Features** → **Wakeup Service**, click on "Add" to create a new wakeup service. The following window will pop up.

The screenshot shows a web form titled "Create New Wakeup Service". The form contains the following fields and options:

- Enable Wakeup Service:** A checked checkbox.
- * Name:** An empty text input field.
- Prompt:** A dropdown menu with "wakeup-call" selected and a "Prompt" label.
- Custom Date:** An unchecked checkbox.
- * Date:** A date input field showing "2017-08-11".
- * Time:** A time input field showing "14:00".
- Members:** Two side-by-side lists of members. The left list is titled "3 items Available" and contains members 1002, 1003, and 1004. The right list is titled "2 items Selected" and contains members 1000 and 1001. Both lists have a search bar and navigation arrows between them.

Figure 223: Create New Wakeup Service

- Fill out the required fields and select the members to add to the wakeup group.

Table 119: Wakeup Service

Enable Wakeup Service	Enable Wakeup service.
Name	Enter a name (up to 64 characters) to identify the wakeup service.
Prompt	Select the prompt to play for that extension.
Custom Date	If disabled, users can select a specific date and time. If enabled users can select multiple days of the week to perform the wakeup.
Date	Select the date or dates when to performs the wakeup call.
Time	Select the time when to play the wakeup call.
Members	Select the members involved within the wakeup service group.

- Click **Save** and **Apply Changes** to apply the changes.

A wakeup service entry is created. The FCM will send a wakeup call to every extension in the member list at the scheduled date and time.

Note: the wakeup service has a limitation on how many members can be added and they are 50 members.

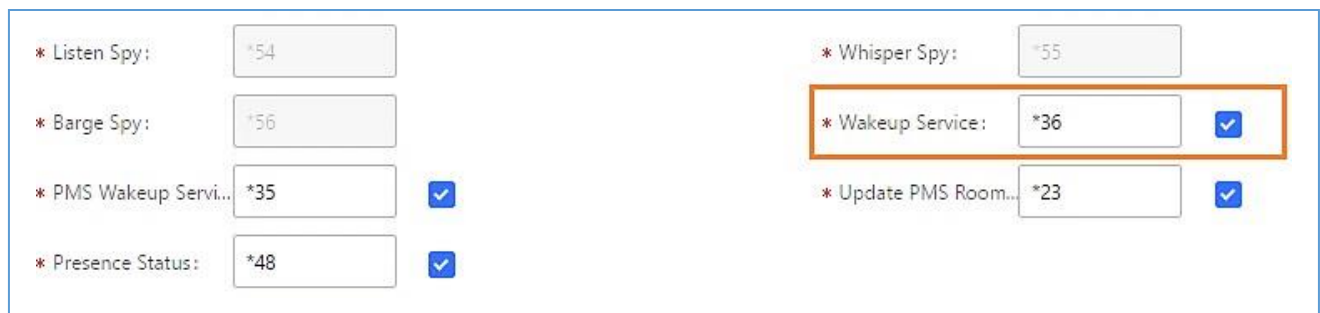

Wake Up Service from User Portal

1. Login to the user portal on the FCM630A.
2. Wake Up service can be found under “Value-added Features→Wakeup Service”, click on “Add” to create a new wakeup service.
3. Configures the Name, Prompt, Date and Time for the user to make the wakeup to.
4. Click and to apply the changes.

Wake Up Service using Feature Code

1. Login to the FCM as admin.
2. Enable “Wakeup Service” from the WebGUI under “Call Features→Feature Codes”.

* Listen Spy:	<input type="text" value="*54"/>	
* Barge Spy:	<input type="text" value="*56"/>	
* PMS Wakeup Servi...	<input type="text" value="*35"/>	<input checked="" type="checkbox"/>
* Presence Status:	<input type="text" value="*48"/>	<input checked="" type="checkbox"/>
* Whisper Spy:	<input type="text" value="*55"/>	
* Wakeup Service:	<input type="text" value="*36"/>	<input checked="" type="checkbox"/>
* Update PMS Room...	<input type="text" value="*23"/>	<input checked="" type="checkbox"/>

3. Click and to apply the changes.
4. Dial “*36” which is the feature code by default to access to the FCM wakeup service to add, update, activate or deactivate FCM wakeup service.

ANNOUNCEMENTS CENTER

The FCM630A supports Announcements Center feature which allows users to pre-record and store voice message into FCM630A with a specified code. The users can also create group with specified extensions. When the code and the group number are dialed together in the combination of code + group number, the specified voice message is sent to all group members and only extensions in the group will hear the voice message.

The screenshot displays the 'Announcement Center' configuration page. On the left is a navigation sidebar with categories like 'Call Features', 'PBX Settings', 'System Settings', 'Maintenance', 'CDR', and 'Value-added Features'. The main area shows two data tables. The first table, 'Announcement Center', has columns for CODE, NAME, and OPTIONS, with one entry: CODE '55', NAME 'FIBERME'. The second table, 'Group', has columns for NUMBER, NAME, MEMBERS, and OPTIONS, with one entry: NUMBER '334', NAME 'IT', MEMBERS '1000, 1001, 1002'. Both tables include pagination (Total: 1, 10/page, Goto 1) and '+ Add' buttons.

Figure 224: Announcements Center

Announcements Center Settings

Table 120: Announcements Center Settings

Name	Configure a name for the newly created Announcements Center to identify this announcement center.
Code	<p>Enter a code number for the custom prompt. This code will be used in combination with the group number. For example, if the code is 55, and group number is 666. The user can dial 55666 to send prompt 55 to all members in group 666.</p> <p style="text-align: center;">Note:</p> <p>The combination number must not conflict with any number in the system such as extension number or meeting number.</p>
Custom Prompt	This option is to set a custom prompt as an announcement to notify group members. The file can be uploaded from page 'Custom Prompt'. Click 'Prompt' to add additional record.
Ring Timeout	Configure the ring timeout for the group members. The default value is 30 seconds.
Auto Answer	If set to Yes the Auto answer will be enabled by the members.

Group Settings

Table 121: Group Settings

Name	<p>Configure a name for the newly created group to identify the group.</p> <p style="text-align: center;">Note: Name cannot exceed 64 characters.</p>
Number	Configure the group number. The group number is used in combination with the code. For example, if group number is 666, and code is 55. The user can dial

	55666 to send prompt 55 to all members in group 666. Note: The combination number must not conflict with any number in the system such as extension number or meeting number and cannot exceed 64 characters.
Members	Select the group members from the available list.

Announcements Center feature can be found under Web GUI→**Value-added Features**→**Announcements Center**. The following example demonstrates the usage of this feature.

1. Click  to add new group.
2. Give a name to the newly created group.
3. Create a group number which is used with code to send voice message.
4. Select the extensions to be included in the group, who will receive the voice message.

Create New Group

* Name:

* Number:

Members:

<input type="checkbox"/> 246 items Available	<input type="checkbox"/> 3 items Selected
<input type="checkbox"/> 1008 <input type="checkbox"/> 1009 <input type="checkbox"/> 1010 <input type="checkbox"/> 1011 <input type="checkbox"/> 1012	<input type="checkbox"/> 1004 <input type="checkbox"/> 1005 <input type="checkbox"/> 1006

Figure 225: Announcements Center Group Configuration

In this example, group “Technical” has number 222. Extension 1004, 1005 and 1006 are in this group.

1. Click [+ Add Announcement Center](#) to create a new Announcement Center.
2. Give a name to the newly created Announcement Center.
3. Specify the code which will be used with group number to send the voice message to.
4. Select the message that will be used by the code from the Custom Prompt drop down menu. To create anew Prompt, please click “Prompt” link and follow the instructions in that page.

Create New Announcement Center

* Name:	<input type="text" value="FIBERME_Test"/>
* Code:	<input type="text" value="33"/>
* Custom Prompt:	<input type="text" value="Welcome.wav"/> Upload Audio File
* Ring Timeout (s):	<input type="text" value="30"/>
* Auto Answer:	<input type="text" value="No"/>

Figure 226: Announcements Center Code Configuration

Code and Group number are used together to direct specified message to the target group. All extensions in the group will receive the message. For example, we can send code 33 to group 222 by dialing 33222 from any extension registered to the FCM630A. All the members in group 222 which are extension 1004, 1005 and 1006 will receive this voice message after they pick up the call.

QUEUE METRICS

The Queue Metrics docking tool provides an interface for FCM system and QM docking. Pass the FCM call queuereport to QM in a richer form. Queue Metrics is a call center control platform that supports login and logout of frequently used agents in the call center, provides call reports, real-time queue monitoring and other functions.

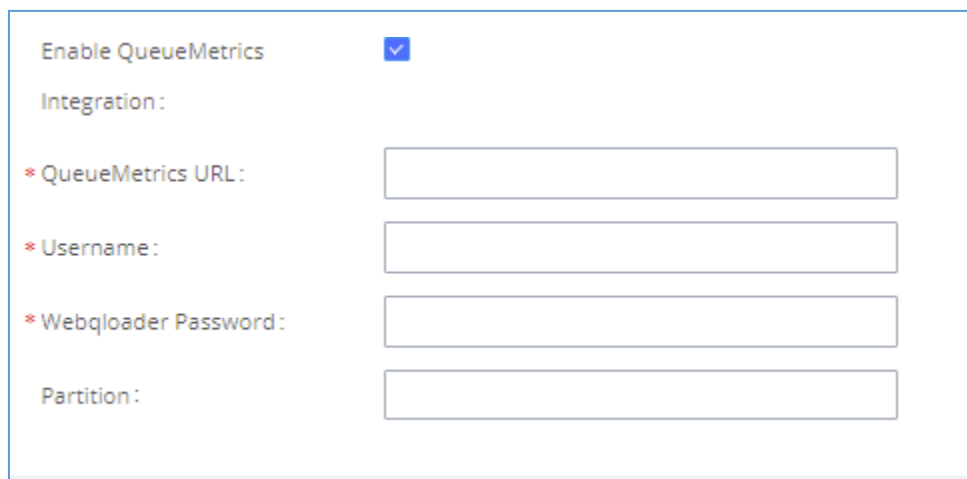

Figure 228: Queue Metrics

Table 122: Queue Metrics configuration parameters

Enable QueueMetrics Integration	Disabled by default.
QueueMetrics URL	Enter the URL of the QueueMetrics on-premise server you have installed. (i.e. http://xxx.xxx.xxx.xxx:8080/queuemetrics .)
username	Configure the username
Webqloader Password	Configure the user password.
Partition	Configure the data storage partition identifier.

STATUS AND REPORTING

PBX Status

The FCM630A monitors the status for Trunks, Extensions, Queues, Meeting Rooms, Interfaces and Parking lot. It presents administrators the real-time status in different sections under Web GUI→System Status→Dashboard.

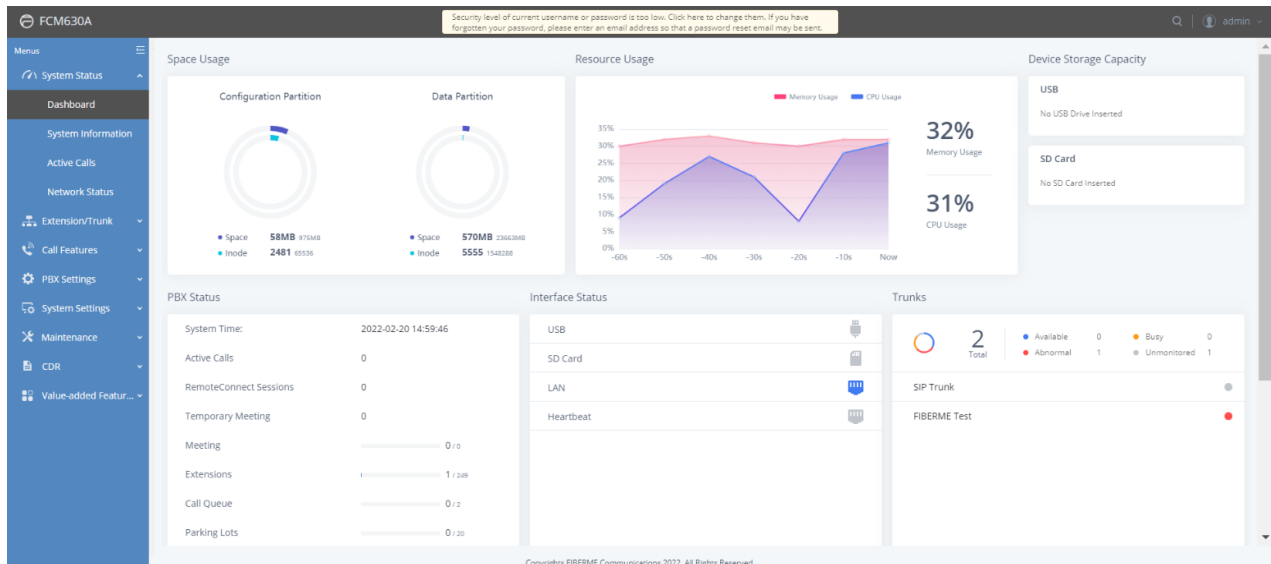

Figure 229: Status→PBX Status

Trunks

Users could see all the configured trunk status in this section.

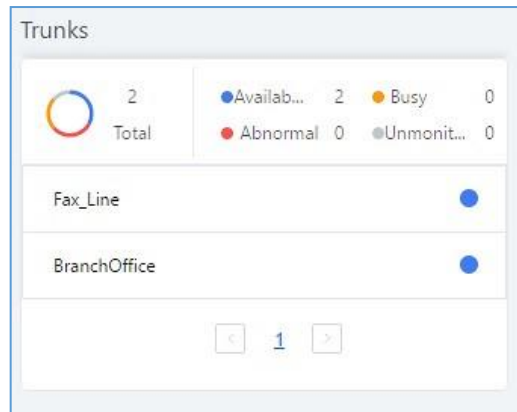

Figure 230: Trunk Status

Table 123: Trunk Status

<p>Status</p>	<p>Display trunk status.</p> <ul style="list-style-type: none"> <p><u>SIP Peer trunk status:</u></p> <p>Unreachable: The hostname cannot be reached.</p> <p>Unmonitored: Heartbeat feature is not turned on to be monitored.</p> <p>Reachable: The hostname can be reached.</p> <p><u>SIP Register trunk status:</u></p> <p>Registered</p> <p>Unrecognized Trunk</p>
<p>Trunks</p>	<p>Display trunk name</p>
<p>Type</p>	<p>Display trunk Type:</p> <ul style="list-style-type: none"> SIP IAX
<p>Username</p>	<p>Display username for this trunk.</p>
<p>Port/Hostname/IP</p>	<p>Display Hostname/IP for VoIP (SIP/IAX) trunk.</p>

Extensions

Extensions Status can be seen from the same configuration page, users can go under Web GUI→Extension/Trunk→Extensions and following page will be displayed listing the extensions and their status information.

<input type="checkbox"/>	STATUS	PRESENCE STA...	EXTENSION	NAME	TYPE	IP AND PORT	EMAIL...	OPTIONS
<input type="checkbox"/>	● Ringing	Available	1000		SIP(WebRTC)	192.168.5.199:5070

	SD Card disconnected.
	LAN/WAN connected.
	LAN/WAN not configured.
	LAN/WAN disconnected.

System Status

The FCM630A system status can be accessed via Web GUI→Status→System Status, which displays the following system information.

General

Under Web GUI→**System Status**→**System Information**→**General**, users could check the hardware and software information for the FCM630A. Please see details in the following table.

Table 126: System Status→General

System Status → System Information → General	
Model	Product model.
Part Number	Product part number.
System Time	Current system time. The current system time is also available on the upper right of each web page.
Up Time	System up time since the last reboot.
Boot	Boot version.
Core	Core version.
Base	Base version.
Program	Program version. This is the main software release version.
Recovery	Recovery version.
Lang	Lang version

Network

Under Web GUI→**System Status**→**System Information**→**Network**, users could check the network information for the FCM630A. Please see details in the following table.

Table 127: System Status→Network

System Status→System Status→Network	
MAC Address	Global unique ID of device, in HEX format. The MAC address can be found on the label coming with original box and on the label located on the bottom of the device.
IPv4 Address	IPv4 address.
IPv6 Address Link	IPv6 address
Gateway	Default gateway address.
Subnet Mask	Subnet mask address.
DNS Server	DNS Server address.
Duplex Mode	Duplex Mode
Speed	Speed

Storage Usage

Users could access the storage usage information from Web GUI→**System Status**→**Dashboard**→**StorageUsage**. It shows the available and used space for Space Usage and Inode Usage.

Space Usage includes:

- **Configuration partition**

This partition contains PBX system configuration files and service configuration files.

- **Data partition**

Voicemail, recording files, IVR file, Music on Hold files etc.

- **USB disk**

USB disk will display if connected.

- **SD Card**

SD Card will display if connected.

Inode Usage includes:

- **Configuration partition**

- **Data partition**

- **Note:**

Inode is the pointer used for file reference in the system. The system usually has limited resources of pointers

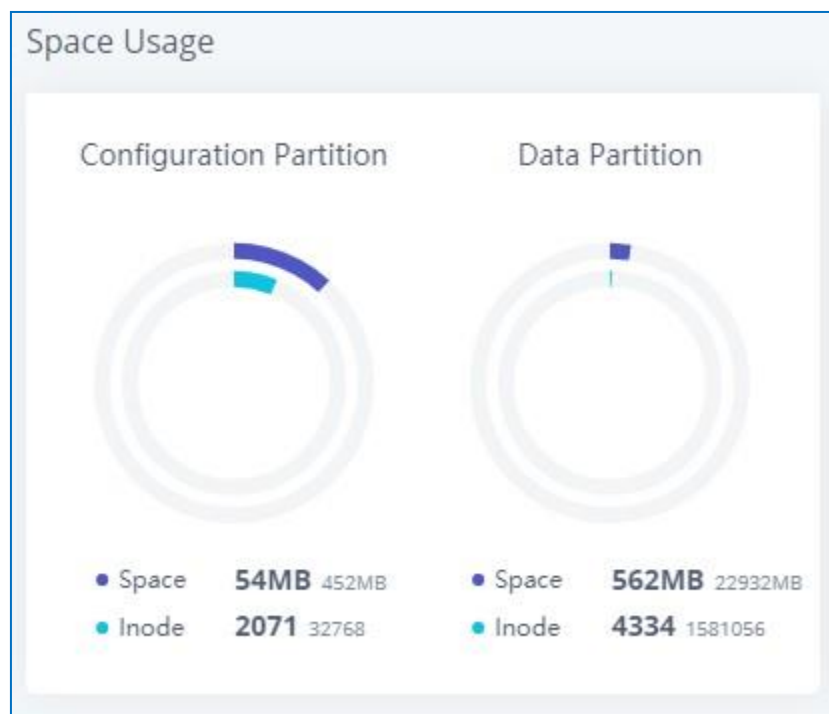

Figure 233: System Status→Storage Usage

Resource Usage

When configuring and managing the FCM630A, users could access resource usage information to estimate the current usage and allocate the resources accordingly. Under Web GUI → System Status → Dashboard → Resource Usage, the current CPU usage and Memory usage are shown in the pie chart.

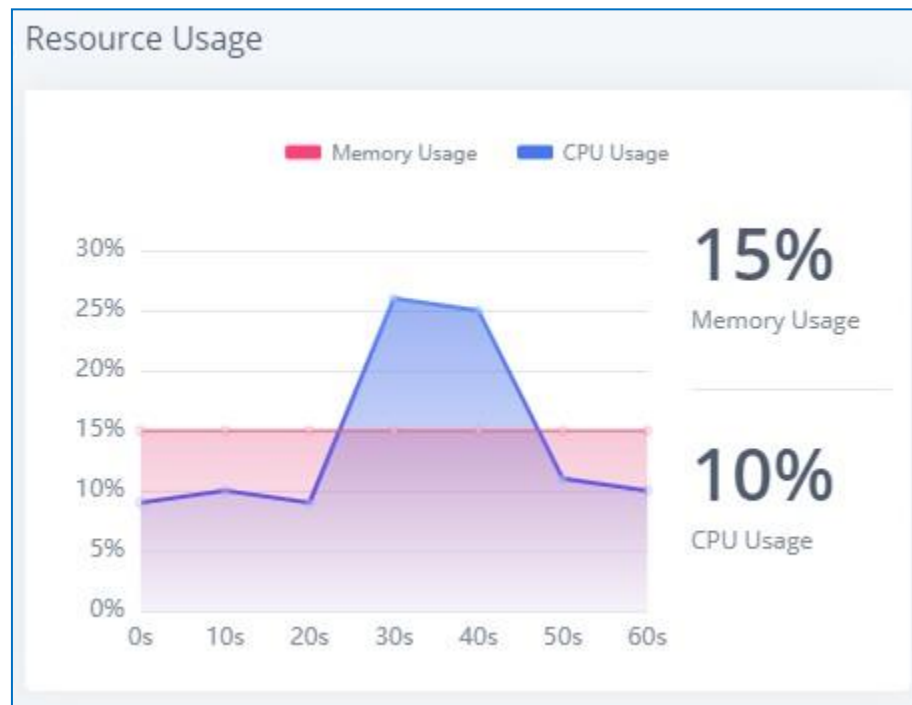

Figure 234: System Status→Resource Usage

System Events

The FCM630A can monitor important system events, log the alerts, and send Email notifications to the system administrator.

Alert Events List

The system alert events list can be found under Web GUI → Maintenance → System Events. The following event and their actions are currently supported on the FCM630A which will have alert and/or Email generated if occurred:

System Events

Alert Log **Alert Events List** Alert Contact Cancel Save

Delivery Method:

Email Alert Interval:

Alert On
 Alert Off
 Email Notification On
 Email Notification Off
 HTTP Notification On
 HTTP Notification Off

27	Data Sync Backup

Click on  to configure the parameters for each event. See examples below.

1. Fail2ban blocking

If the system Fail2ban is blocking, the event will be recorded in the alert log.

2. User login banned

If user login is blocked, the event will be recorded in the alert log.

3. System Crash

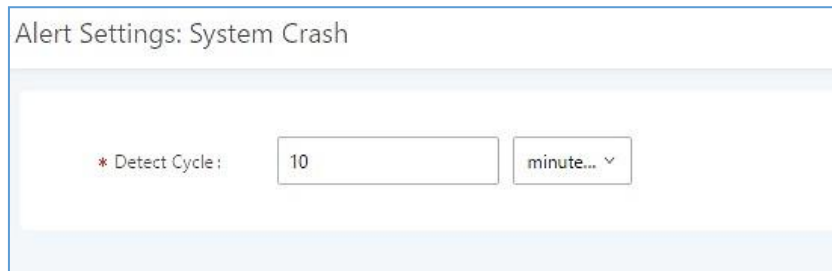

Figure 236: System Events→Alert Events Lists: System Crash

- **Detect Cycle:** The FCM will detect the event at each cycle based on the specified time. Users can enter the number and then select second(s)/minute(s)/hour(s)/day(s) to configure the cycle.

Click on the switch OFF ON to turn on/off the alert and Email notification for the event. Users could

also select the checkbox for each event and then click on button "Alert On", "Alert Off", "Email NotificationOn", "Email Notification Off" to control the alert and Email notification configuration.

4. Restore Config

Once the system configuration is restored, the configuration restoration event will be recorded in the alert log.

5. System Update

Once the system is upgraded, the system upgrade event will be recorded in the alarm log.

6. System Reboot

FCM will detect the system restart and will send an alert for it.

7. TLS Cert Expiration

Starting 7 days before the HTTP Server TLS certificate in the FCM device expires, an expiration countdown notification is sent every day; the certificate has expired, an expiration notification is sent; after the alarm

notification is generated, a valid new certificate is uploaded, and a notification to restore the TLS certificate is generated.

8. HA failure warning

After the HA dual-system hot backup disaster recovery function is enabled in the FCM device, the HA fault alarm is automatically turned on. When the device has a software and hardware related fault, an HA fault alarm is generated.

9. Modify Super Admin Password

Once the super administrator password is modified, the system will record the password modification event in the alarm log.

10. NAS

If the system network disk is abnormal, the event will be recorded in the alarm log.

11. Disk Usage

The screenshot shows a configuration window titled "Alert Settings: Disk Usage". It contains two rows of settings:

- * Detect Cycle: A text input field containing "10" and a dropdown menu currently showing "minute...".
- * Alert Threshold: A text input field containing "80" and a "%" symbol.

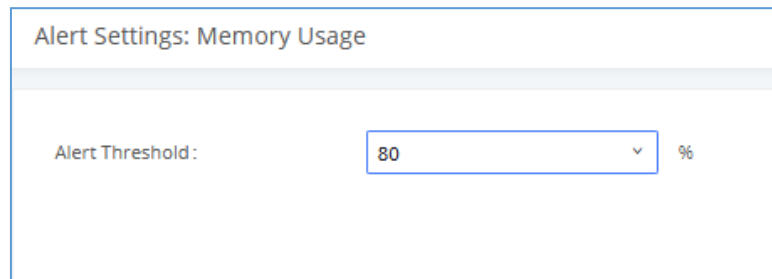

Figure 237: System Events→Alert Events Lists: Disk Usage

- **Detect Cycle:** The FCM630A will perform the internal disk usage detection based on this cycle. Users can enter the number and then select second(s)/minute(s)/hour(s)/day(s) to configure the cycle.
- **Alert Threshold:** If the detected value exceeds the threshold (in percentage), the FCM630A system will send the alert.

Note: If the threshold is exceeded, any behavior of operating the disk will be rejected, including stopping file upload, IM writing, recording and CDR recording.

12. Memory Usage

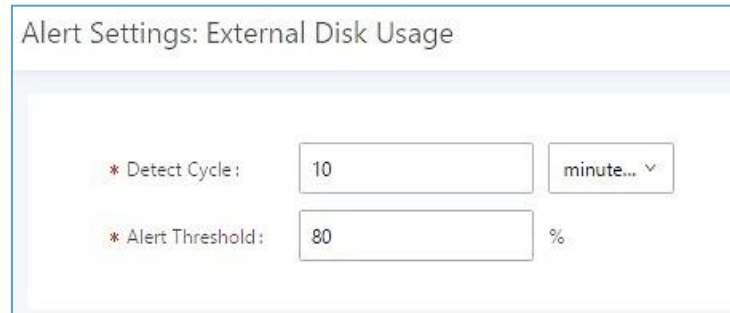

The screenshot shows a configuration window titled "Alert Settings: Memory Usage". It contains a single field labeled "Alert Threshold:" with a text input box containing the number "80" and a dropdown arrow to its right, followed by a percentage symbol "%".

Figure 238: System Events→Alert Events Lists: Memory Usage

- **Alert Threshold:** If the detected value exceeds the threshold (in percentage), the FCM630A system will send the alert.

13. External Disk Usage

The screenshot shows a configuration window titled "Alert Settings: External Disk Usage". It contains two fields: the first is labeled "* Detect Cycle:" with a text input box containing "10" and a dropdown menu showing "minute..."; the second is labeled "* Alert Threshold:" with a text input box containing "80" and a percentage symbol "%".

Figure 239: System Events→Alert Events Lists: External Disk Usage

- **Detect Cycle:** The FCM630A will perform the External disk usage detection based on this cycle. Users can enter the number and then select second(s)/minute(s)/hour(s)/day(s) to configure the cycle.
- **Alert Threshold:** If the detected value exceeds the threshold (in percentage), the FCM630A system will send the alert.

14. External disk status

If the external disk of the system is Connected/Disconnected, the event will be recorded in the alarm log.

15. CPU Usage Call Control

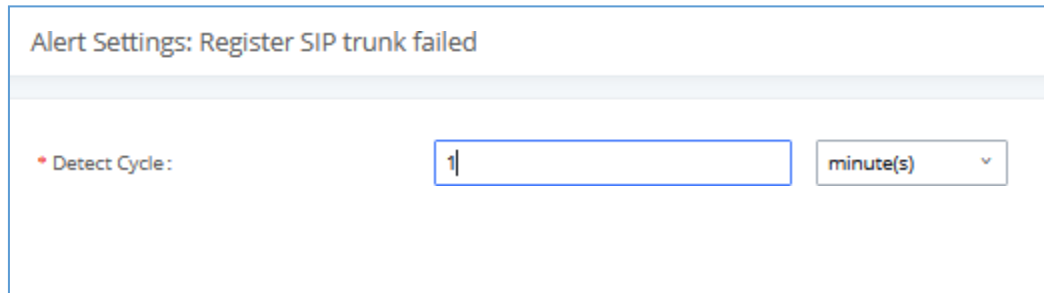

The CPU flow control threshold is defined under System Settings → General Settings, and the default value is 90%. When the traffic exceeds the predetermined value, the event will be recorded in the alert log and new calls will be prohibited.

16. Emergency Calls

If the system generates an emergency call, the event will be recorded in the alert log.

17. Register SIP trunk failed

The screenshot shows a web interface titled "Alert Settings: Register SIP trunk failed". Below the title, there is a label "Detect Cycle:" followed by a text input field containing the number "1" and a dropdown menu set to "minute(s)".

Figure 240: System Events→Alert Events Lists: Register SIP Trunk Failed

- **Detect Cycle:** The FCM will detect the failure of SIP trunk registration at a set interval. Users can enter the number and then select second(s)/minute(s)/hour(s)/day(s) to configure the cycle.

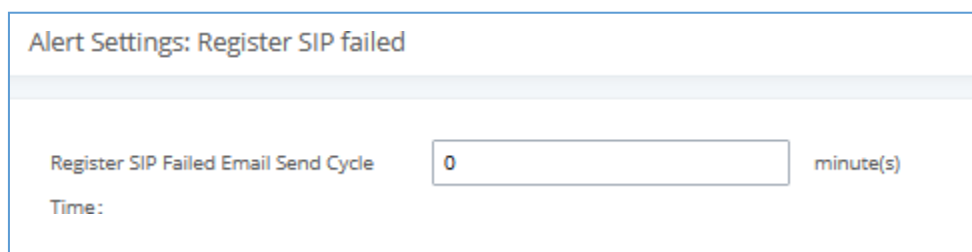

18. SIP peer trunk status

If the SIP peer trunks status is abnormal, the event will be recorded in the alert log.

19. SIP Outgoing Call through Trunk Failure

If the system SIP trunk outgoing call fails, the event will be recorded in the alert log.

20. Register SIP failed

The screenshot shows a web interface titled "Alert Settings: Register SIP failed". Below the title, there is a label "Register SIP Failed Email Send Cycle" followed by a text input field containing the number "0" and a dropdown menu set to "minute(s)". Below this, there is a label "Time:".

Figure 241: System Events→Alert Events Lists: Register SIP Failed

Configure the sending period of the SIP registration failure alert. The first registration failure alert of the same IP to the same SIP account will be sent immediately, and then no alerts will be sent for similar failure warnings in the cycle time. After the cycle time expires, an alert will be sent again to count the number of occurrences of similar SIP registration failure alerts during the cycle. When set to 0, alerts are always sent immediately.

21. SIP lost registration

If System SIP extension registration is lost, the event will be recorded in the alert log.

22. SIP Internal Call Failure

If the system SIP extension call fails within the office, the event will be recorded in the alert log.

23. Remote concurrent calls

If the remote concurrent call fails, the event will be recorded in the alert log.

24. Trunk Concurrent calls

When the system detects that the number of concurrent calls of a certain relay exceeds the threshold set by the relay within a certain period of time, the event will be recorded in the alarm log. Calls are not restricted if the threshold is exceeded.

25. User login success

Successful user login events will be recorded in the alert log.

26. User login failed

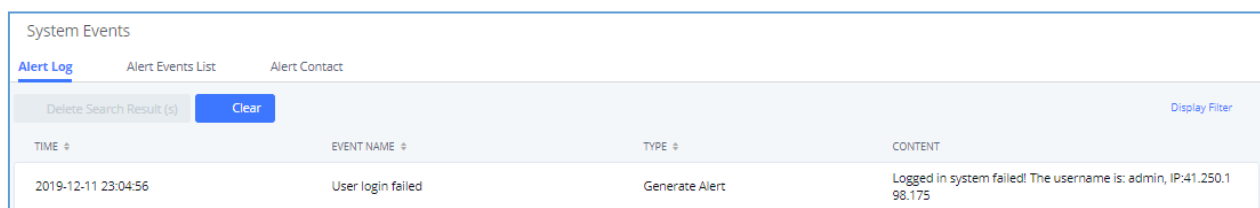

User login failure events will be recorded in the alert log.

27. Data Sync Backup

If the system performs data synchronization and backup abnormalities, the event will be recorded in the alertlog.

Alert Log

Under Web GUI→**Maintenance**→**System Events**→**Alert Log**, system messages from triggered system events are listed as alert logs. The following screenshot shows system crash alert logs.

TIME	EVENT NAME	TYPE	CONTENT
2019-12-11 23:04:56	User login failed	Generate Alert	Logged in system failed! The username is: admin, IP:41.250.198.175

Figure 242: System Events→Alert Log

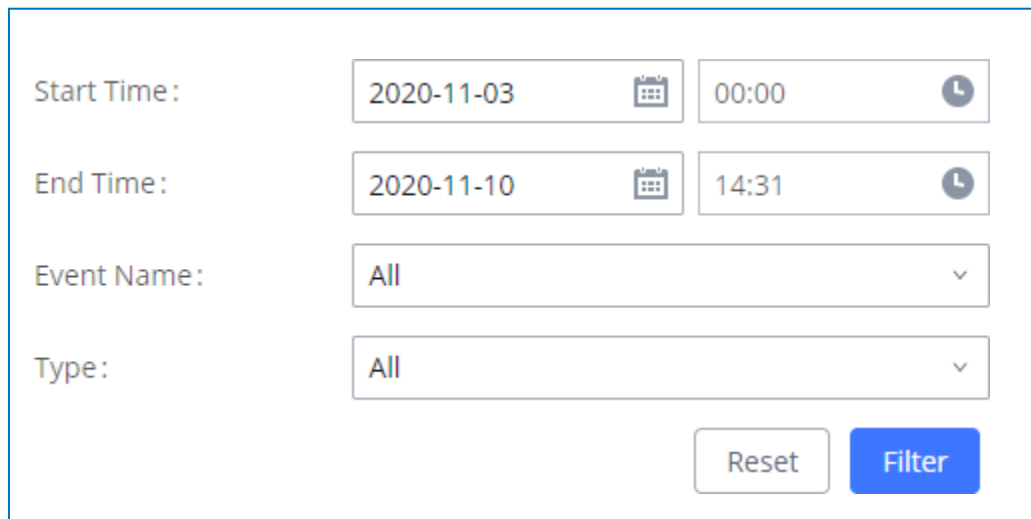

User could also filter alert logs by selecting a certain event category, type of alert log, and/or specifying a certain

time period. The matching results will be displayed after clicking on [Filter](#). Alert logs are classified into twotypes by the system:

1. **Generate Alert:** Generated when alert events happen, for example, alert logs for disk usage exceeding the alert threshold.
2. **Restore to Normal:** Generated when alert events being cleared, for example, logs for disk usage droppingback below the alert threshold.

User could filter out alert logs of “Generate Alert” or “Restore to Normal” by specifying the type according to need. The following figure shows an example of filtering out alert logs of type of “Restore to Normal”.

The screenshot displays a filter interface for alert logs. It includes the following elements:

- Start Time:** A date field set to 2020-11-03 and a time field set to 00:00.
- End Time:** A date field set to 2020-11-10 and a time field set to 14:31.
- Event Name:** A dropdown menu currently showing 'All'.
- Type:** A dropdown menu currently showing 'All'.
- Buttons:** A 'Reset' button and a blue 'Filter' button.

Figure 243: Filter for Alert Log

Alert Contact

This feature allows the administrator to be notified when one of the Alert events mentioned above happens. Users could add administrator's Email address under Web GUI→Maintenance→System Events→Alert Contact to send the alert notification to an email (Up to 10 Email addresses can be added) or also specify an HTTP server where to send this alert.

Table 129: Alert Contact

Super Admin Email	Configure the email addresses to send alert notifications to. Up to 10 email addresses can be added.
Admin Email	Configure the email addresses to send alert notifications to. Up to 10 email addresses can be added.
Email Template	Please refer to section Email Templates
Protocol	Protocol used to communicate with the server. HTTP or HTTPS. Default one is HTTP .
HTTP Server	The IP address or FQDN of the HTTP/HTTPS server.
HTTP Server Port	HTTP/HTTPS port
Warning Template	Customize the template used for system warnings. By default: <code>{"action":"\${ACTION}","mac":"\${MAC}","content":"\${WARNING_MSG}"}</code>
Notification Template	Customize the notification template to receive relevant alert information. By default: <code>{"action":"\${ACTION}","cpu":"\${CPU_USED}","memory":"\${MEM_USED}","disk":"\${DISK_USED}","external_disk":"\${EXTERNAL_DISK_USED}"}</code> Note: <i>The notification message with "action:0" will be sent periodically if Notification Interval is set.</i>
Notification Interval	Modifies the frequency at which notifications are sent in seconds. No notifications will be sent if the value is "0". Default value: 20

TemplateVariables

`#{MAC}` : MAC Address

`#{WARNING_MSG}` : Warning message

`#{TIME}` : Current System Time

`#{CPU_USED}` : CPU Usage

`#{MEM_USED}` : Memory Usage

`#{ACTION}` : Message Type. Refer to [Table 142: Alert Events]

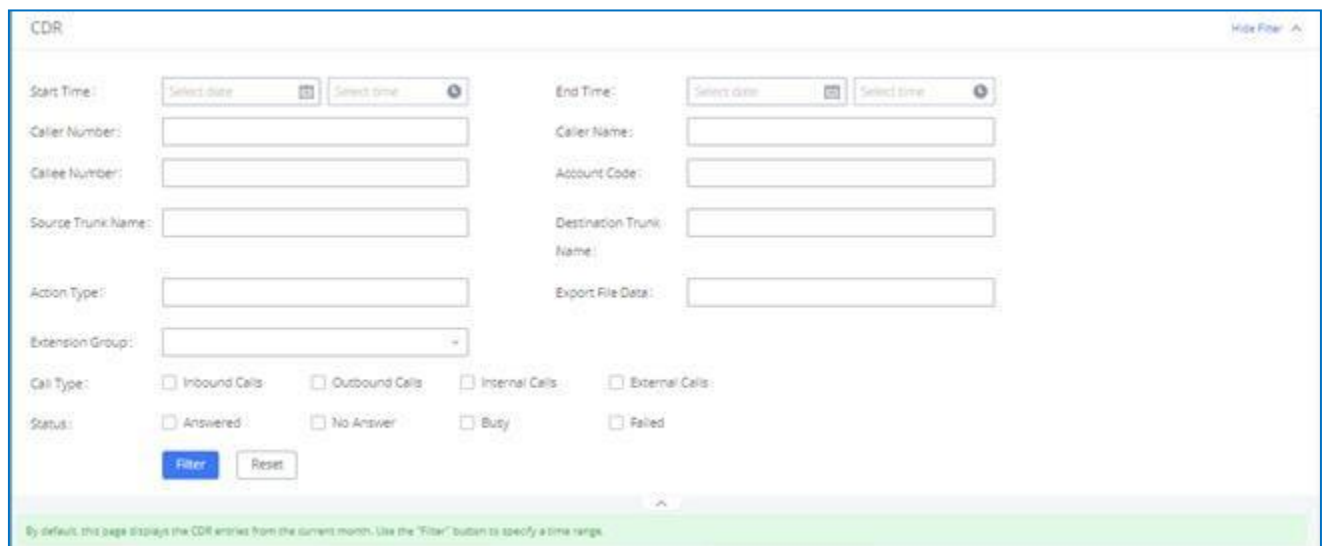

`#{DISK_USED}` : Disk Usage

`#{EXTERNAL_DISK_USED}` : Disk Usage

CDR

CDR (Call Detail Record) is a data record generated by the PBX that contains attributes specific to a single instance of phone call handled by the PBX. It has several data fields to provide detailed description for the call, such as phone number of the calling party, phone number of the receiving party, start time, call duration, etc.

On the FCM630A, the CDR can be accessed under Web GUI → **CDR** → **CDR**. Users could filter the call report by specifying the date range and criteria, depending on how the users would like to include the logs to the report. Click on "Filter" button to display the generated report.

CDR

Start Time:

End Time:

Caller Number:

Caller Name:

Callee Number:

Account Code:

Source Trunk Name:

Destination Trunk Name:

Action Type:

Export File Data:

Extension Group:

Call Type: Inbound Calls Outbound Calls Internal Calls External Calls

Status: Answered No Answer Busy Failed

By default, this page displays the CDR entries from the current month. Use the "Filter" button to specify a time range.

Figure 244: CDR Filter

Table 130: CDR Filter Criteria

<p>Call Type</p>	<p>Groups the following:</p> <ul style="list-style-type: none"> • Inbound calls: Inbound calls are calls originated from a non-internal source (like a VoIP trunk) and sent to an internal extension. • Outbound calls: Outbound calls are calls sent to a non-internal source (like a VoIP trunk) from an internal extension. • Internal calls: Internal calls are calls from one internal extension to another extension, which are not sent over a trunk. • External calls: External calls are calls sent from one trunk to another trunk, which are not sent to any internal extension.
<p>Status</p>	<p>Filter with the call status, the available statuses are the following:</p> <ul style="list-style-type: none"> • Answered • No Answer • Busy • Failed
<p>Source Trunk Name</p>	<p>Select source trunk(s) and the CDR of calls going through inbound the trunk(s) will be filtered out.</p>
<p>Destination Trunk Name</p>	<p>Select destination trunk(s) and the CDR of calls going outbound through the trunk(s) will be filtered out.</p>
<p>Action Type</p>	<p>Filter calls using the Action Type, the following actions are available:</p> <ul style="list-style-type: none"> • Announce • Announcement page • Dial • Announcements • Callback • Call Forward

	<ul style="list-style-type: none"> • Meeting • DISA • Follow Me • IVR • Page • Parked Call • Queue • Ring Group • Transfer • VM • VMG • VQ_Callback • Wakeup • Emergency Call • Emergency Notify • SCA
Extension Group	Specify the Extension Group name to filter with.
Export File Data	<p>Select the fields that will be exported, the following fields are available:</p> <ul style="list-style-type: none"> • Account Code • Session • Premier caller • Action type • Source trunk name • Destination trunk name

	<ul style="list-style-type: none"> • Caller number • Caller ID • Caller name • Callee number • Answer by • Context • Start time • Answer time • End time • Call time • Talk time • Source channel • Dest channel • Call status • Dest channel extension • Last app • Last data • AMAFLAGS • UIQUEID • Call type • NAT
Account Code	Select the account Code to filter with. If pin group CDR is enabled, the call with pin group information will be displayed as part of the CDR under Account Code Field.
Start Time	Specify the start time to filter the CDR report. Click on the calendar icon on the right and the calendar will show for users to select the exact date and time.

End Time	Specify the end time to filter the CDR report. Click on the calendar icon on the right and the calendar will show for users to select the exact date and time.
Caller Number	<p>Enter the caller number to filter the CDR report. CDR with the matching caller number will be filtered out.</p> <p>User could specify a particular caller number or enter a pattern. '.' matches zero or more characters, only appears in the end. 'X' matches any digit from 0 to 9, case-insensitive, repeatable, only appears in the end.</p> <p><u>For example:</u></p> <p>3XXX: It will filter out CDR that having caller number with leading digit 3 and of 4 digits' length.</p> <p>3.: It will filter out CDR that having caller number with leading digit 3 and of any length.</p>
Caller Name	Enter the caller name to filter the CDR report. CDR with the matching caller name will be filtered out.
Callee Number	<p>Enter the callee number to filter the CDR report. CDR with the matching callee number will be filtered out.</p> <p>Note: The "Callee Number" filter field supports specifying Pattern (example: 3XXX) or using Leading digits (example: 3.) as filtering options.</p>

The call report will display as the following figure shows.

STATUS	CALL FROM	CALL TO	ACTION TYPE	START TIME	CALL TIME	TALK TIME	ACCOUNT CODE	RECORDING FILE OPTIONS
▼	5555	1000	DIAL	2019-12-11 09:53:03	0:00:11	0:00:06		-
STATUS	PREMIER CALLER	CALL FROM	CALL TO	ACTION TYPE	START TIME	CALL TIME	ACCOUNT CODE	RECORDING FILE OPTIONS
	5555	5555	1000	DIAL	2019-12-11 09:53:03	0:00:11	0:00:06	-

Figure 245: Call Report

The CDR report has the following data fields:

- **Start Time**

Format: 2019-12-11 09:53:03

- **Action Type**

Example:

IVR

DIAL

WAKEUP

- **Call From**

Example format: 5555

- **Call To**

Example format: 1000

- **Call Time**

Format: 0:00:11

- **Talk Time**

Format: 0:00:06

- **Account Code**

Example format:

FIBERME /Test

- **Status**

Answered, Busy, No answer or Failed.

Users could perform the following operations on the call report.

- **Sort by “Start Time”**

Click on the header of the column to sort the report by "Start Time". Clicking on "Start Time" again will reverse the order.

- **Download Searched Results**

Click on “Download Search Result(s)” to export the records filtered out to a .csv file.

- **Download All Records**

Click on “Download All Records” to export all the records to a .csv file.

- **Delete All**

Click on  **Delete All** button to remove all the call report information.

- **Delete Search Result**

On the bottom of the page, click on  **Delete Search Result (s)** button to remove CDR records that appear on search results.

Note: When deleting CDR, a prompt will now appear asking whether to delete all recording files or not.

- **Play/Download/Delete Recording File (per entry)**

If the entry has audio recording file for the call, the three icons on the rightest column will be activated for users to select. In the following picture, the second entry has audio recording file for the call.

Click on  to play the recording file; click on  to download the recording file in .wav format;  click onto delete the recording file (the call record entry will not be deleted).

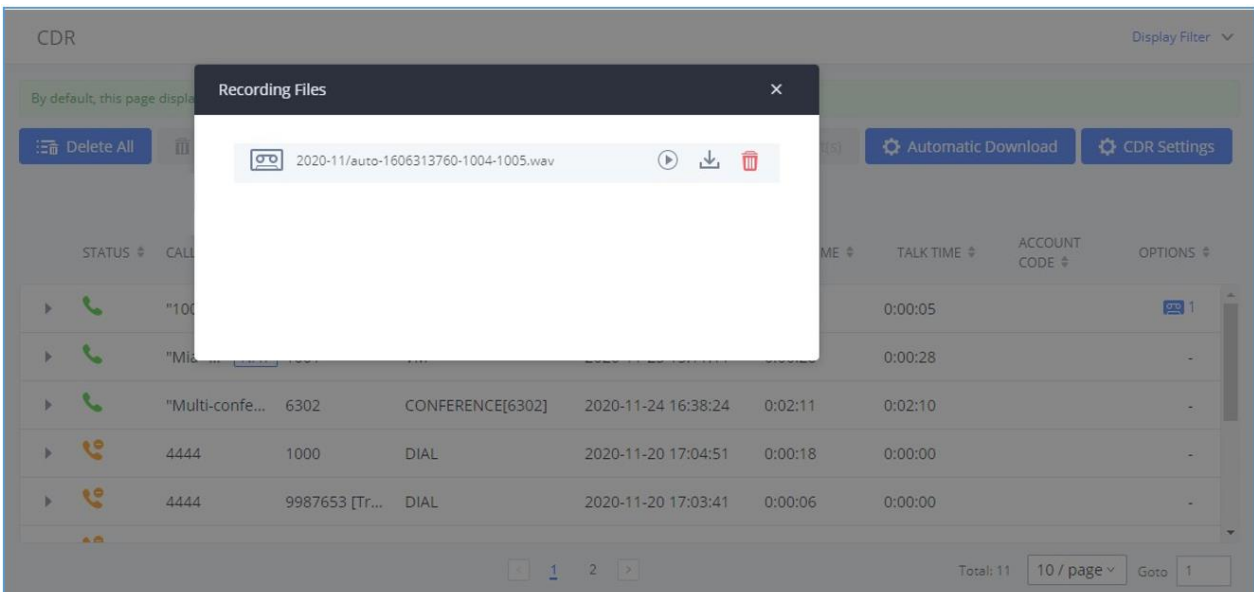

Figure 246: Call Report Entry with Audio Recording File

- **Automatic Download CDR Records**

User could configure the FCM630A to automatically download the CDR records and send the records to multiple Email recipients in a specific hour. Click on “Automatic Download Settings” and configure the parameters in the dialog below.

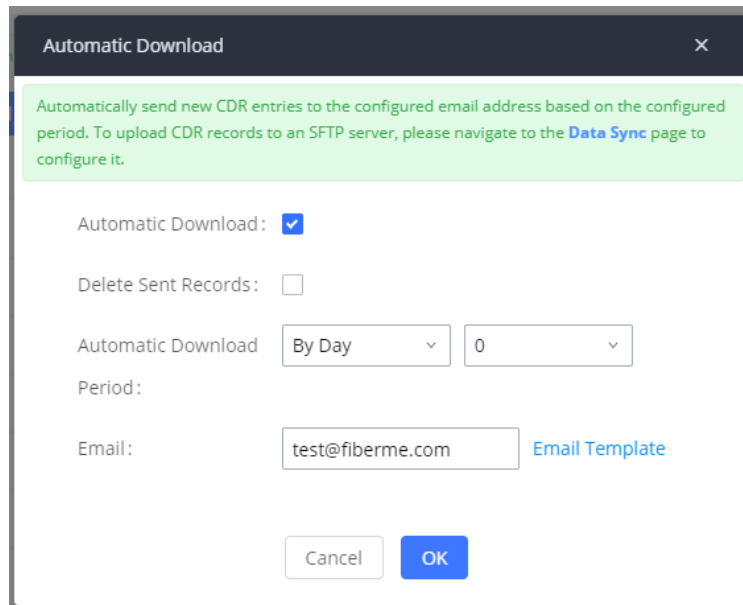

Figure 247: Automatic Download Settings

To receive CDR record automatically from Email, check “Enable” and select a time period “By Day” “By Week” or “By Month”, select Hour of the day as well for the automatic download period. Make sure you have entered an Email or multiple email addresses where to receive the CDR records.

Note: users have the option to delete the sent records “**Delete Sent Records**”

Starting from FCM630A firmware 1.0.9.x, transferred call will no longer be displayed as a separate call entry in CDR. It will display within call record in the same entry. CDR new features can be found under Web GUI→CDR→CDR. The user can click on the option icon for a specific call log entry to view details about this entry, such as premier caller and transferred call information.

STATUS	CALL FROM	CALL TO	ACTION TYPE	START TIME	CALL TIME	TALK TIME	ACCOUNT CODE	RECORDING FILE OPTIONS
	5555	1000	DIAL	2019-12-11 09:53:03	0:00:11	0:00:06		-

Figure 248: CDR Report

	1000	"abillii lolo" 1000...	5555	QUEUE[6500]	2019-12-10 03:23:14	0:00:13	0:00:07		-

Figure 249: Detailed CDR Information

Downloaded CDR File

The downloaded CDR (.csv file) has different format from the Web GUI CDR. Here are some descriptions.

- **Caller number, Callee number**

"Caller number": the caller ID.

"Callee number": the callee ID.

caller number	callee number	context	calerid	source channel
	2009	from-internal	"Wake Up Call" <WakeUp>	Local/2009@from-internal-00000001;2
2007	31100	from-internal	"" <2007>	PJSIP/2007-00000014
2009	1100	from-internal	"John Doe" <2009>	PJSIP/2009-00000015

Figure 250: Downloaded CDR File Sample

- **Context**

There are different context values that might show up in the downloaded CDR file. The actual value can vary case by case. Here are some sample values and their descriptions.

from-internal: internal extension makes outbound calls.

ext-did-XXXXX: inbound calls. It starts with "ext-did", and "XXXXX" content varies case by case, which also relate to the order when the trunk is created.

ext-local: internal calls between local extensions.

- **Source Channel, Dest Channel**

Sample 1:

caller number	callee number	context	calerid	source channel	dest channel	lastapp
2009	1100	from-internal	"John Doe" <2009>	PJSIP/2009-00000015	PJSIP/trunk_1-00000016	Dial

Figure 251: Downloaded CDR File Sample - Source Channel and Dest Channel 2

"SIP" means it is a SIP call. There are three formats:

- (a) PJSIP/NUM-XXXXXX, where NUM is the local SIP extension number. The last XXXXX is a random string and can be ignored.
- (b) PJSIP/trunk_X/NUM, where trunk_X is the internal trunk name, and NUM is the number to dial out through the trunk.
- (c) PJSIP/trunk_X-XXXXXX, where trunk_X is the internal trunk name and it is an inbound call from this trunk. The last XXXXX is a random string and can be ignored.

There are some other values, but these values are the application name which are used by the dialplan.

IAX2/NUM-XXXXXX: it means this is an IAX call.

Local/@from-internal-XXXXX: it is used internally to do some special feature procedure. We can simply ignore it.

Hangup: the call is hung up from the dialplan. This indicates there are some errors or it has run into abnormal cases.

Playback: play some prompts to you, such as 183 response or run into an IVR.

ReadExten: collect numbers from user. It may occur when you input PIN codes or run into DISA

Note: The language of column titles in exported CDR reports and statistics reports will be based on the FCM's display language

CDR Export Customization

Users can select the data they want to see in exported CDR reports by first clicking on the *Filter* button on the CDR page under CDR → CDR and selecting the desired information in the *Export File Data* field.

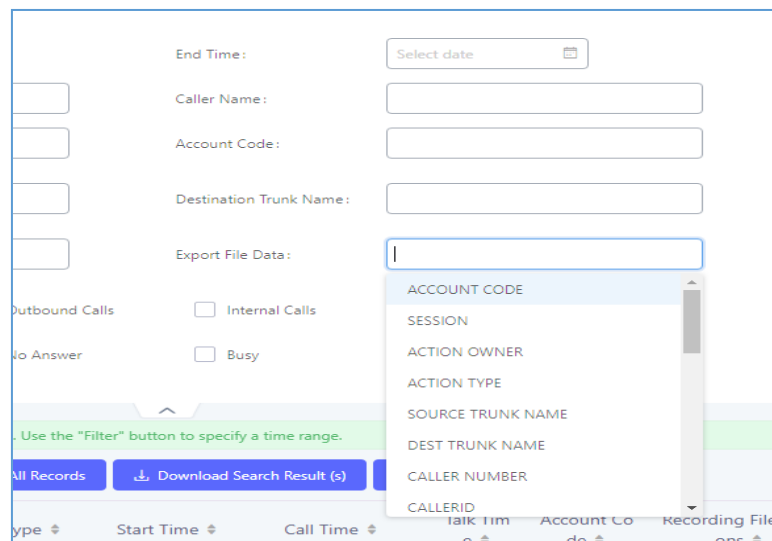

Figure 252: CDR Export File data

Statistics

CDR Statistics is an additional feature on the FCM630A which provides users a visual overview of the callreport across the time frame. Users can filter with different criteria to generate the statistics chart.

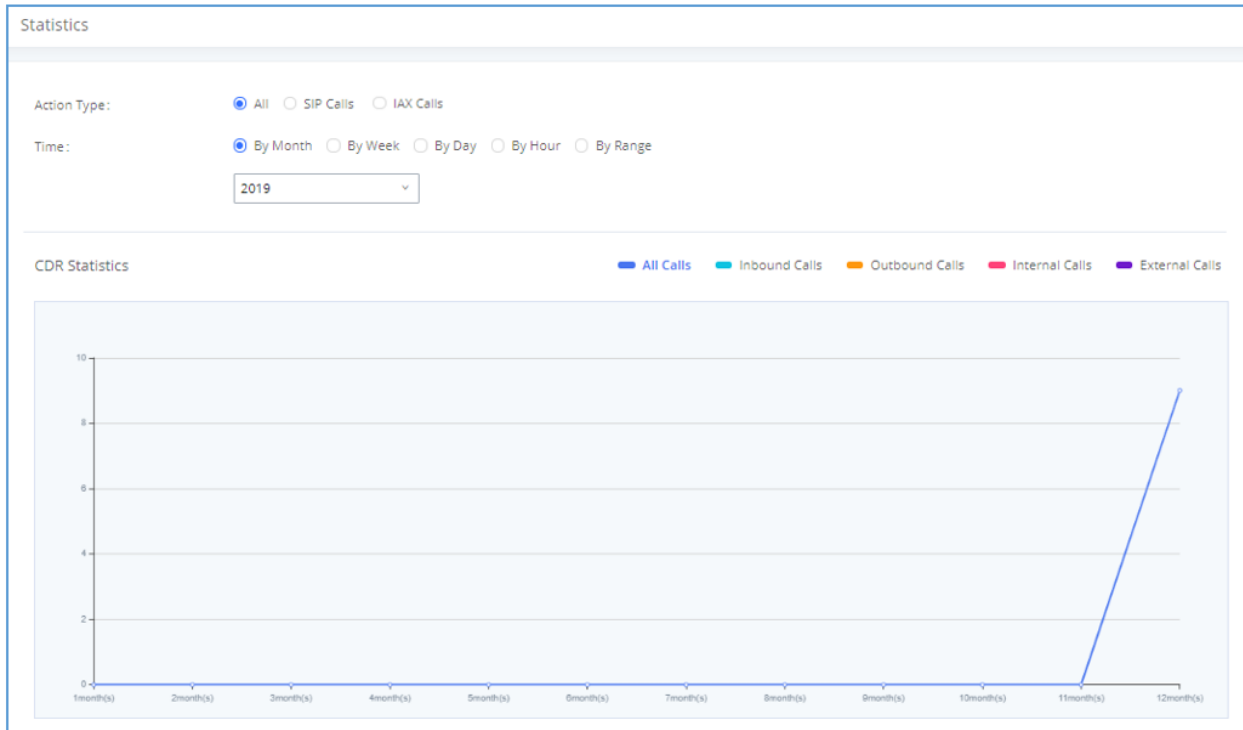

Figure 253: CDR Statistics

Table 131: CDR Statistics Filter Criteria

<p>Trunk Type</p>	<p>Select one of the following trunk types.</p> <ul style="list-style-type: none"> • All • SIP Calls • IAX Calls
<p>Call Type</p>	<p>Select one or more in the following checkboxes.</p> <ul style="list-style-type: none"> • Inbound calls • Outbound calls • Internal calls

	<ul style="list-style-type: none"> • External calls • All calls
Time Range	<ul style="list-style-type: none"> • By month (of the selected year). • By week (of the selected year). • By day (of the specified month for the year). • By hour (of the specified date). • By range. For example, 2020-01 To 2020-03.

Recording Files

This page lists all the recording files recorded by "Auto Record" per extension/ring group/call queue/trunk, or viafeature code "Audio Mix Record". If external storage device is plugged in, for example, SD card or USB drive, the files are stored on the external storage. Otherwise, internal storage will be used on the FCM630A.

Figure 254: CDR→Recording Files

- Click on “**Delete Selected Recording Files**” to delete the recording files.
- Click on “**Delete All Recording Files**” to delete all recording files.
- Click on “**Batch Download Recording Files**” in order to download the selected recording files.
- Click on “**Download All Recording Files**” to download all recordings files.
- Select Either “**USB Disk**” or “**Local**” to show recording files stored on external or internal storage, depending on selected storage space.
- Select whether to show call recordings, queue recordings or meeting recordings.

- Click on  to download the recording file in .wav format.
- Click on  to delete the recording file.
- To sort the recording file, click on the title "Caller", "Callee" or "Call Time" for the corresponding column. Clickon the title again can switch the sorting mode between ascending order or descending order.

USER PORTAL

Users could log into their web GUI portal using the extension number and user password. When an extension is created in the FCM630A, the corresponding user account for the extension is automatically created. The user portal allows access to a variety of features which include user information, extension configuration and CDR as well as settings and managing value-added features like Call Queue, Wakeup Service and CRM.

Users also can access their personal data files (call recordings, Voicemail Prompts ...).

The login credentials are configured by Super Admin. The following figure shows the dialog of editing the account information by Super Admin. The Username must be the extension number and it is not configurable, and the password is set on "User Password" field and it should not be confused with the SIP extension password.

Edit User Information: 1000			
* User Name:	1000	* User Password:	mYpassWord!
Privilege:	Consumer	Department:	Support
Fax:		Email Address:	user1000@domain.local
First Name:	John	Last Name:	DOE
Home Number:		Mobile Phone Numb..	

Figure 255: Edit User Information by Super Admin

The following screenshot shows an example of login page using extension number 1000 as the username.

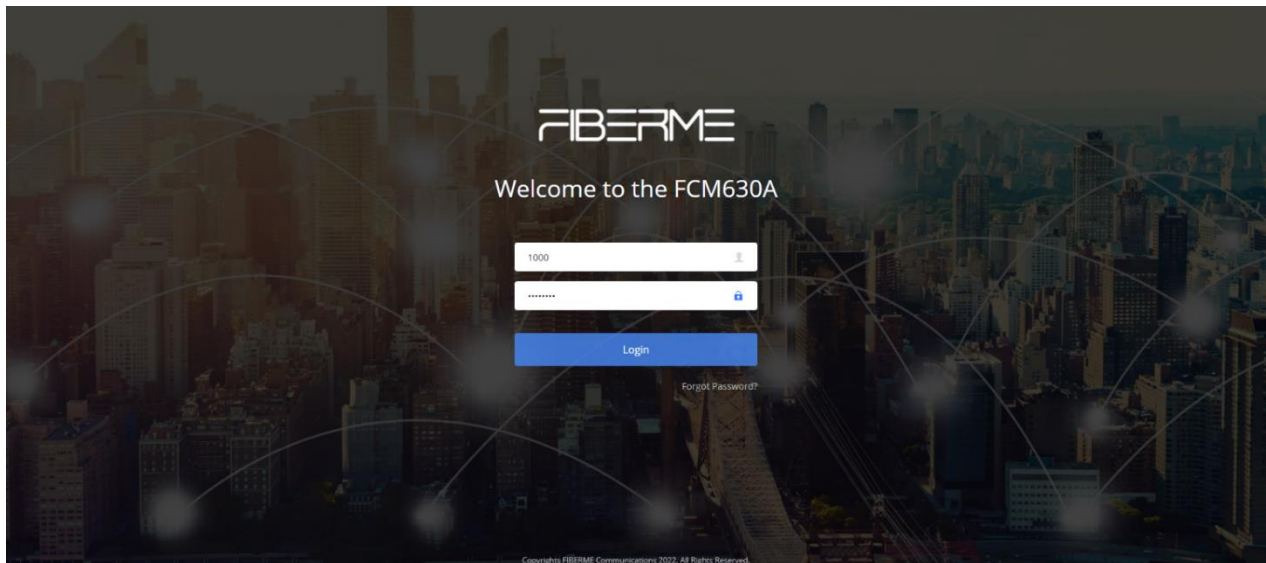

Figure 256: User Portal Login

After login, the Web GUI display is shown as below.

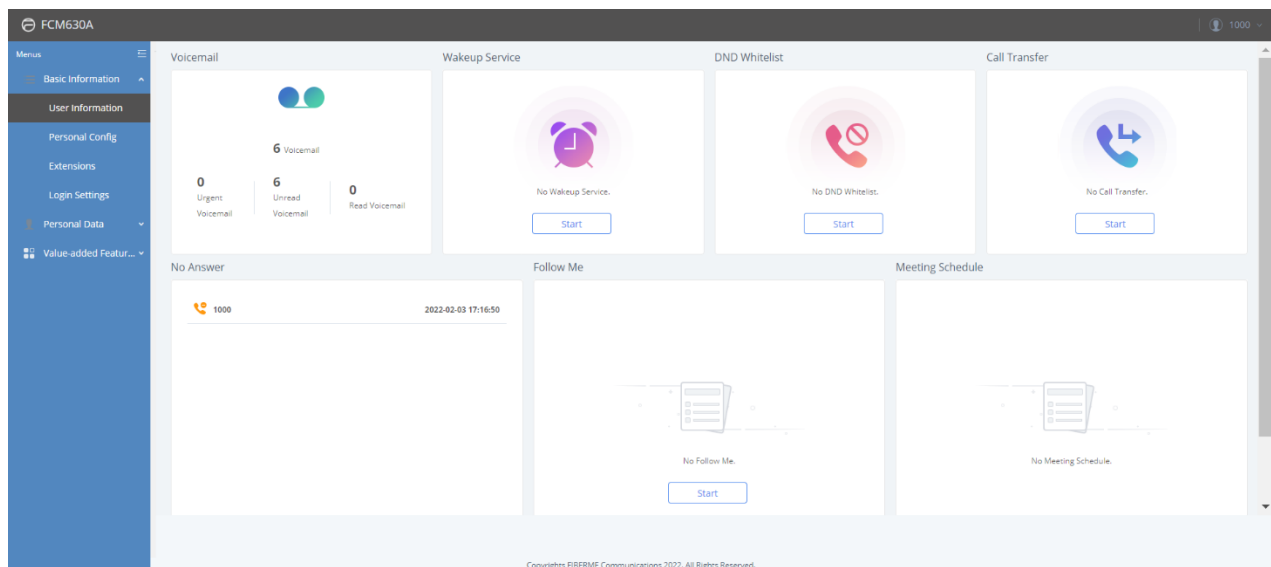

Figure 257: User Portal Layout

After successful login, the user has the following three configuration tabs:

Basic Information

Under this menu, the user can configure and change his/her personal information including (first name, last name, password, email address, department...). And they can also set and activate their extension features (presence status, call forward, DND) to be reflected on the FCM.

Also, the user can see from this menu the Call Details Records and search for specific ones along with the possibility to download the records on CSV format for later usage.

Personal Data

Under this section, the user can access and manage their personal data files which includes (voicemail files, callrecordings ...) along with the possibility to set Follow me feature to without requesting the Super admin to set the feature from admin account.

Value-added Features

On this section, the user has access to manage and use all rich value-added features which includes.

- + If user is a member of call queue, they can check the queue's activity from the "Call Queue" section.
- + Create and enable Wake Up service.
- + Enable and configure CRM connection to either SugarCRM or Salesforce.

For the configuration parameter information in each page, please refer to [

Table 132: User Management→Create New User] for options in **User Portal→Basic Information→User Information** page; please refer to **[EXTENSIONS]** for options in **User Portal→Basic Information→Extension** page; please refer to **[CDR]** for **User Portal→Basic Information→CDR** page.

MAINTENANCE

User Management

User management is on Web GUI→Maintenance→User Management page. User could create multiple accounts for different administrators to log in the FCM630A Web GUI. Additionally, the system will automatically create user accounts along with creating new extensions for extension users to login to the Web GUI using their extension number and password. All existing user accounts for Web GUI login will be displayed on User Management page as shown in the following figure.

USERNAME	PRIVILEGE	LAST OPERATION TIME	OPTIONS

Figure 258: User Management Page Display

User Information

When logged in as Super Admin, click on "Add" to create a new account for Web GUI user. The following dialog will prompt. Configure the parameters as shown in below table.

User Name:	John	Privilege:	Administrator
User Password:	admin123	Department:	IT
Fax:		Email Address:	
First Name:		Last Name:	
Home Number:		Mobile Phone Number:	12365478

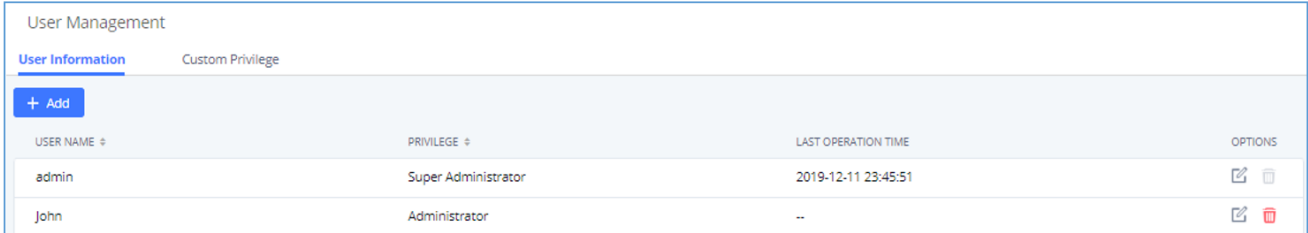

Figure 259: Create New User

Table 132: User Management→Create New User

Username	Configure a username to identify the user which will be required in Web GUI login. Letters, digits, and underscore are allowed in the username .
User Password	Configure a password for this user which will be required in Web GUI login. English input is allowed without space, ' and " .
Privilege	This is the role of the Web GUI user. Currently only "Admin" is supported when Super Admin creates a new user.
Department	Enter the necessary information to keep a record for this user.
Email Address	
First Name	
Last Name	
Home Number	
Phone Number	

Once created, the Super Admin can edit the users by clicking on  or delete the user by clicking on .

The screenshot shows the 'User Management' interface with two tabs: 'User Information' (selected) and 'Custom Privilege'. There is a '+ Add' button. Below is a table with columns: USER NAME, PRIVILEGE, LAST OPERATION TIME, and OPTIONS.

USER NAME	PRIVILEGE	LAST OPERATION TIME	OPTIONS
admin	Super Administrator	2019-12-11 23:45:51	 
John	Administrator	--	 

Figure 260: User Management – New Users

Custom Privilege

Four privilege levels are supported:

- **Super Administrator**

- This is the highest privilege. Super Admin can access all pages on FCM630A Web GUI, change configuration for all options and execute all the operations.
- Super Admin can create, edit, and delete one or more users with "Admin" privilege.

- Super Admin can edit and delete one or more users with “Consumer” privilege
- Super Admin can view operation logs generated by all users.
- By default, the user account “admin” is configured with “Super Admin” privilege and it is the only user with “Super Admin” privilege. The Username and Privilege level cannot be changed or deleted.
- Super Admin could change its own login password on Web GUI → **Maintenance** → **Login Settings** page.
- Super Admin could view operations done by all the users in Web GUI → **Maintenance** → **User Management** → **Operation Log**

• **Administrator**

- Users with “Admin” privilege can only be created by “Super Admin” user.
- “Admin” privilege users are not allowed to access the following pages:

Maintenance → Upgrade

Maintenance → Cleaner

Maintenance → Reset/Reboot

Settings → User Management → Operation Log

- “Admin” privilege users cannot create new users for login.

Note: By default, administrator accounts are not allowed to access backup menu, but this can be assigned to them by editing the option “**Maintenance → User Management → Custom Privilege**” then press  to edit the “Admin” account and include backup operation permission for these types of users.

Figure 261: Assign Backup permission to "Admin" users

• Consumer

- A user account for Web GUI login is created automatically by the system when a new extension is created.
- The user could log in the Web GUI with the extension number and password to access user information, extension configuration, CDR of that extension, personal data, and value-added features. For more details; please refer to [User Portal Guide](#).
- The SuperAdmin user can click on  on the "General_User" in order to enable/disable the custom privilege from deleting their own recording files, changing SIP credentials, and disabling voicemail service in their user portal account.

Figure 262: General User

- **Custom Privilege**

The Super Admin user can create users with different privileges. 33 items are available for privilege customization.

- API Configuration
- API Configuration
- Backup
- Callback
- Call Queue
- CDR Recording Files
- CDR Records
- CDR Statistics
- Dial By Name
- DISA
- Emergency Calls
- Event List
- Extensions
- Outbound Routes
- Inbound Routes
- Feature Codes
- IVR
- Paging/Intercom
- Parking Lot
- Pickup Groups
- PMS - Wakeup Service
- Ring Groups

- SCA
- Speed Dial
- System Status
- System Events
- Time Settings
- Meeting
- Voicemail
- Voice Prompt
- Wakeup Service
- Zero Config
- LDAP Server
- Announcement.

Figure 263: Create New Custom Privilege

Log in FCM630A as super admin and go to **Maintenance→User Management→Custom Privilege**, create privilege with customized available modules.

Note: When selecting the CDR recording files/CDR Records items, you can enable/disable the ability to "deleteCDR and recording files".

To assign custom privilege to a sub-admin, navigate to FCM Web GUI→Maintenance→User

Management→**User Information**→Create New User/Edit Users, select the custom privilege from “Privilege” option.

Concurrent Multi-User Login

When there are multiple Web GUI users created, concurrent multi-user login is supported on the FCM630A. Multiple users could edit options and have configurations take effect simultaneously. However, if different users are editing the same option or making the same operation (by clicking on “Apply Changes”), a prompt will pop up as shown in the following figure.

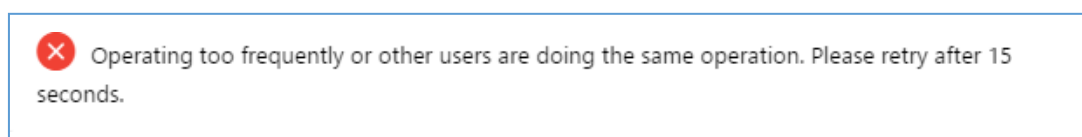

Figure 264: Multiple User Operation Error Prompt

Change Password

After logging in the FCM630A Web GUI for the first time, it is highly recommended for users to change the default password to a more complicated password for security purpose. Follow the steps below to change the Web GUI access password.

1. Go to Web GUI→**Maintenance**→**Login Settings**→**Change Password / Email** page.
2. Enter the old password first.
3. Enter the new password and re-type the new password to confirm. The new password has to be at least 4 characters. The maximum length of the password is 30 characters.
4. Configure the Email Address that is used when login credential is lost.
5. Click on "Save" and the user will be automatically logged out.
6. Once the web page comes back to the login page again, enter the username "admin" and the new password to login.

Email Address	The Email address is the User Email Address. It is used for receiving password information if the user forgets his password.

Change Username

FCM630A allows users now to change Super Administrator username.

Figure 266: Change Username

Change binding Email

FCM630A allows user to configure binding email in case login password is lost. FCM630A login credential will be sent to the designated email address. The feature can be found under **Web GUI→Maintenance→Login Settings→Change Password / Email**

Figure 267: Change Binding Email

Table 133: Change Binding Email option

Email Address	Email Address is used to retrieve password when password is lost
----------------------	--

Login Security

After the user logs in the FCM630A Web GUI, the user will be automatically logged out after certain timeout, or he/she can be banned for a specific period if the login timeout is exceeded. Those values can be specified under FCM630A web **GUI→Maintenance→Login Settings→Login Security** page.

The “User Login Timeout” value is in minute and the default setting is 10 minutes. If the user does not make any operation on Web GUI within the timeout, the user will be logged out automatically. After that, the Web GUI will be redirected to the login page and the user will need to enter username and password to log in.

If set to 0, there is no timeout for the Web GUI login session and the user will not be automatically logged out.

“Maximum number of login attempts” can prevent the FCM630A from brutal force decryption, if this number is exceeded user IP address will be banned from accessing the FCM for a period of time based on user configuration, the default value is 5.

“User ban period” specify the period of time in minutes an IP will be banned from accessing the FCM if the User max number of try login is exceeded, the default value is 5.

“**Login Banned User List**” show the list of IPs’ banned from the FCM.

“Login Whitelist” User can add a list of IPs’ to avoid the above restriction, thus, they can exceed the User maxnumber of try login.

The screenshot displays the 'Login Settings' configuration page. At the top, there are tabs for 'Change Password / Email' and 'Login Security', with 'Login Security' being the active tab. To the right of the tabs are 'Cancel' and 'Save' buttons. Below the tabs, there are three configuration items, each with a red asterisk indicating a required field:

- 'User Login Timeout:' with a text input field containing the value '10'.
- 'Maximum number of login attempts:' with a text input field containing the value '5'.
- 'User ban period:' with a text input field containing the value '5'.

Below these settings are two sections:

- Login Banned User List:** This section features a search bar with the placeholder text 'Please enter ip address'. Below the search bar is a table with columns for 'IP ADDRESS', 'USER NAME', 'BANNED TIME', and 'OPTIONS'. The table currently contains the text 'No Data'.
- Login Whitelist:** This section has a green informational banner that reads: 'The IP addresses in the Login Whitelist will not be restricted. This option doesn't support network segment format.' Below the banner is a blue '+ Add' button and a table with columns for 'IP ADDRESS' and 'OPTIONS'. This table also contains the text 'No Data'.

Figure 268: Login Timeout Settings

Operation Log

Super Admin has the authority to view operation logs on FCM630A Web GUI→Settings→User Management→Operation Log page. Operation logs list operations done by all the Web GUI users, for example, Web GUI login, creating trunk, creating outbound rule and etc. There are 7 columns to record the operation details “Date”, “Username”, “IP Address”, “Results”, “Page Operation”, “Specific Operation” and “Remark”.

DATE	USER NAME	IP ADDRESS	RESULTS	PAGE OPERATION	SPECIFIC OPERATION	REMARK
2019-12-11 23:52:56	admin12345	41.250.0.39	Operation successful	Login Settings: updateLoginBanned	OLD_ip: 41.250.198.175.	Click to modify notes

Figure 269: Operation Logs

The operation log can be sorted and filtered for easy access. Click on or at the top of each column to sort. For example, clicking on for "Date" will sort the logs according to newer operation date and time. Clicking on for "Date" will reverse the order.

Table 134: Operation Log Column Header

Date	The date and time when the operation is executed.
Username	The username of the user who performed the operation.
IP Address	The IP address from which the operation is made.

Results	The result of the operation.
Page Operation	The page where the operation is made. For example, login, logout, delete user, create trunk and etc.
Specific Operation	Click on  to view the options and values configured by this operation.
Remark	Allows users to add notes and remarks to each operation

User could also filter the operation logs by time condition, IP address and/or username. Configure these conditions and then click on "Display Filter".

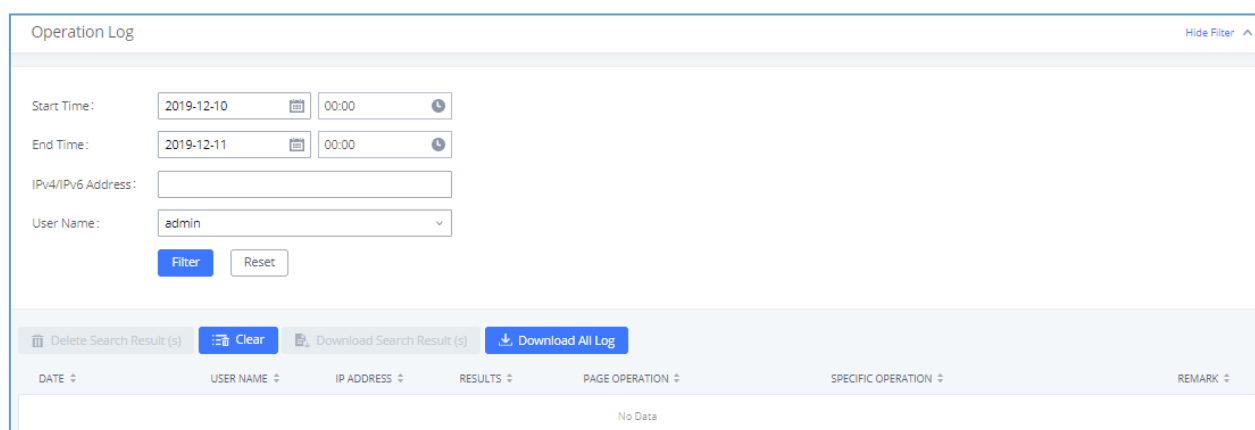

Figure 270: Operation Logs Filter

The above figure shows an example that operations made by user "support" on device with IP 192.168.40.173 from 2014-11-01 00:00 to 2014-11-06 15:38 are filtered out and displayed.

To delete operation logs, users can perform filtering first and then click on  to delete the filtered result of operation logs. Or users can click on  to delete all operation logs at once.

Upgrading

The FCM630A can be upgraded to a new firmware version locally. And in order to do that, please follow the below steps:

1. Download the latest FCM630A firmware file from the following link and save it in your PC.
<https://www.fiberme.com/firmware>
2. Log in the Web GUI as administrator in the PC.
3. Go to Web GUI→**Maintenance**→**Upgrade**, upload the firmware file by clicking on “choose file to upload”and select the firmware file from your PC. The default firmware file name is FCM630Afw.bin

Figure 271: Local Upgrade

Figure 272: Upgrading Firmware Files

4. Wait until the upgrading process is successful and a window will be popped up in the Web GUI.

Figure 273: Reboot FCM630A

5. Click on "OK" to reboot the FCM630A and check the firmware version after it boots up.

 **Notes:**

- Please do not interrupt or power cycle the FCM630A during upgrading process.

- The firmware file name allows the use of the special characters
characters: # \$ ^ & * + () [] / ; ' | , < > ?

No Local Firmware Servers

Service providers should maintain their own firmware upgrade servers. For users who do not have TFTP/HTTP/HTTPS server, some free windows version TFTP servers are available for download from

http://www.solarwinds.com/products/freetools/free_tftp_server.aspx

<http://tftpd32.jounin.net>

Please check our website at <https://www.fiberme.com/firmware> for latest firmware.

Instructions for local firmware upgrade via TFTP:

1. Unzip the firmware files and put all of them in the root directory of the TFTP server;
2. Connect the PC running the TFTP server and the FCM630A to the same LAN segment;
3. Launch the TFTP server and go to the File menu→Configure→Security to change the TFTP server's default setting from "Receive Only" to "Transmit Only" for the firmware upgrade;
4. Start the TFTP server and configure the TFTP server in the FCM630A web configuration interface;
5. Configure the Firmware Server Path to the IP address of the PC;
6. Update the changes and reboot the FCM630A.

End users can also choose to download a free HTTP server from <http://httpd.apache.org/> or use

Microsoft IIS web server.

Backup

The FCM630A configuration can be backed up locally or via network. The backup file will be used to restore the configuration on FCM630A when necessary.

Backup/Restore

Users could backup the FCM630A configurations for restore purpose under WebGUI→Maintenance→Backup→Backup/Restore.

Click on "Backup" to create a new backup file. Then the following dialog will show.

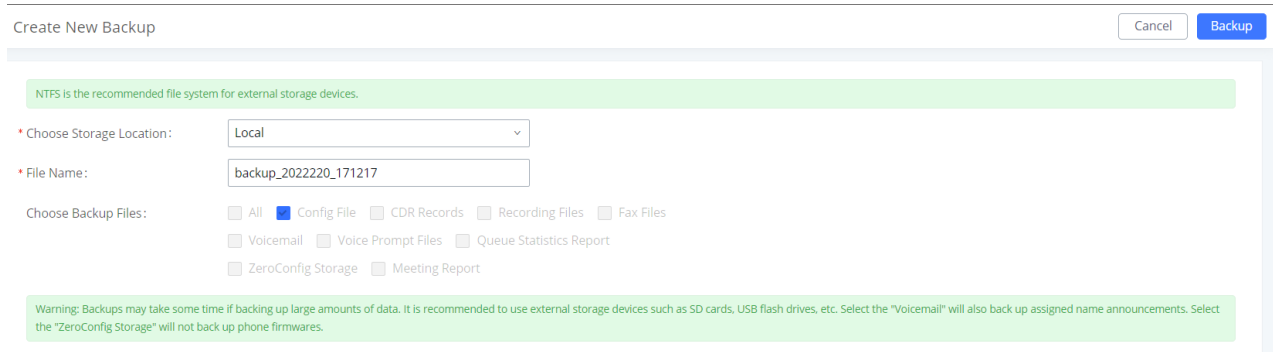

Figure 274: Create New Backup

1. Choose the type(s) of files to be included in the backup.
2. Choose where to store the backup file: USB Disk, SD Card, Local or NAS.
3. Name the backup file.
4. Click on "Backup" to start backup.

Once the backup is done, the list of the backups will be displayed with date and time in the web page. Users can download , restore , or delete  it from the FCM630A internal storage or the external device.

Click on  to upload backup file from the local device to FCM630A. The uploaded backup file will also be displayed in the web page and can be used to restore the FCM630A.

Please make sure the total number of extensions and total number of meeting rooms are compactable before restoring to another FCM model. Otherwise, it will prompt a warning and stop the restore process.

Backup

Backup/Restore Data Sync

Backup file must be in .tar format and less than 30MB in size. Filename supports alphanumeric characters, dashes (-), and underscores (_).

Copyrights FIBERME Communications 2022. All Rights Reserved.

Figure 275: Backup / Restore

The  option allows FCM to perform automatically backup on the user specified time. Regular backup file can only be stored in USB / SD card / SFTP server. User is allowed to set backup time from 0-23 and how frequent the backup will be performed.

Schedule Backup

NTFS is the recommended file system for external storage devices.

Enable Scheduled Backup:

Choose Storage Location: SFTP Server

* Account:

Password:

* Server Address:

Destination Directory:

* Backup Time: 00:00

* Backup Frequency: 1

Choose Backup Files:

All Config File CDR Records Recording Files

Voicemail Voice Prompt Files Queue Statistics Report

ZeroConfig Storage Conference Report

+ Test Connection

Figure 276: Local Backup

Data Sync

Besides local backup, users could backup the voice records/voice mails/CDR in a daily basis to a remote servervia SFTP protocol automatically under Web GUI→**Maintenance**→**Backup**→**Data Sync**.

The client account supports special characters such as @ or ".". Allowing the use email address as SFTP accounts. It allows users as well to specify the destination directory on SFTP server for backup file. If the directory does not exist on the destination, FCM630A will create the directory automatically

Backup

Backup/Restore [Data Sync](#)

Use SFTP to automatically sync CDR, recordings, voicemail, CDR, and fax every day.

Data Sync Configuration

Enable Data Sync:

Choose Data Sync Files: CDR Records Recording Files

No record to view

Figure 277: Data Sync

Table 135: Data Sync Configuration

Enable Data Sync	Enable the auto data sync function. The default setting is "No".
Account	Enter the Account name on the SFTP backup server.
Password	Enter the Password associate with the Account on the SFTP backup server.

Server Address	Enter the SFTP server address.
Destination Directory	Specify the directory in SFTP server to keep the backup file. Format: 'xxx/xxx/xxx', If this directory does not exist, FCM will create this directory automatically.
Sync Time	Enter 0-23 to specify the backup hour of the day.

Before saving the configuration, users could click on . The FCM630A will then try connecting

the server to make sure the server is up and accessible for the FCM630A. Save the changes and all the backuplogs will be listed on the web page. After data sync is configured, users could also manually synchronize all data

by clicking on  instead of waiting for the backup time interval to come.

Restore Configuration from Backup File

To restore the configuration on the FCM630A from a backup file, users could go to Web GUI → **Maintenance** → **Backup** → **Backup/Restore**.

- A list of previous configuration backups is displayed on the web page. Users could click on  of the desired backup file and it will be restored to the FCM630A.
- If users have other backup files on PC to restore on the FCM630A, click on "Upload Backup File" first and select it from local PC to upload on the FCM630A. Once the uploading is done, this backup file will be displayed in the list of previous configuration backups for restore purpose. Click on  to restore from the backup file.

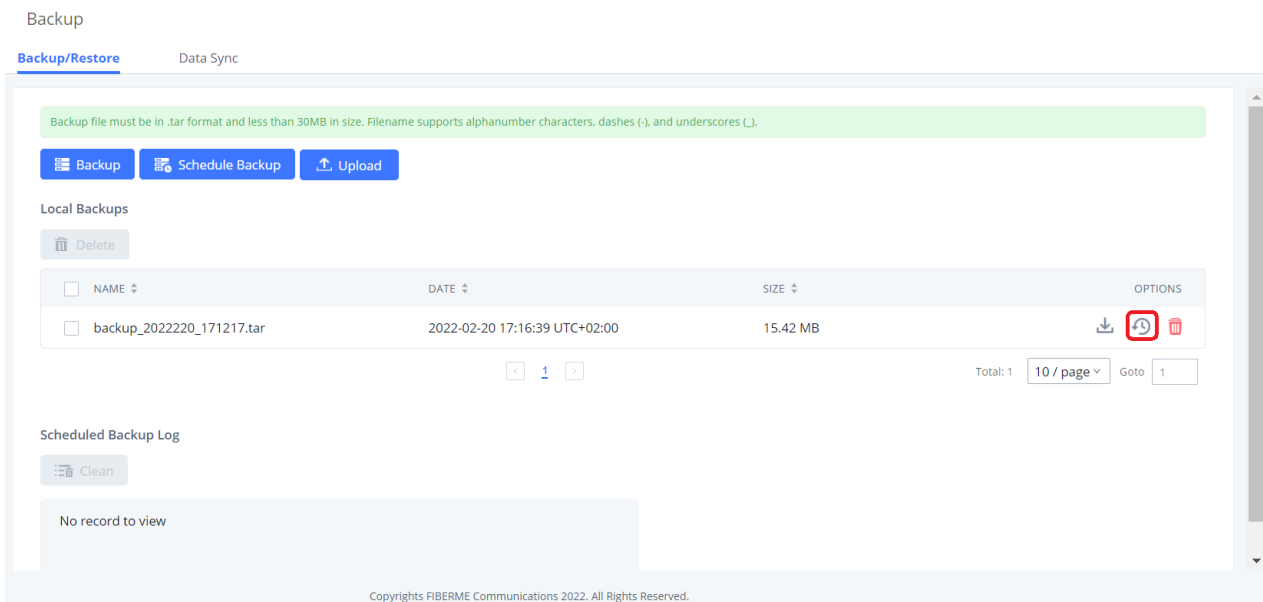

Figure 278: Restore FCM630A from Backup File

Note:

- The uploaded backup file must be a tar file with no special characters like *,!,#, @,&,\$,%,^,(,)/,\,space in the file name.
- The uploaded back file size must be under 10MB.

System Cleanup/Reset

Reset and Reboot

Users could perform reset and reboot under Web GUI → **Maintenance** → **System Cleanup/Reset** → **Reset and Reboot**.

- To reboot the device, click on reboot icon.

- To factory reset the device, click on reset icon, then all the configurations and data will be reset to factory default.

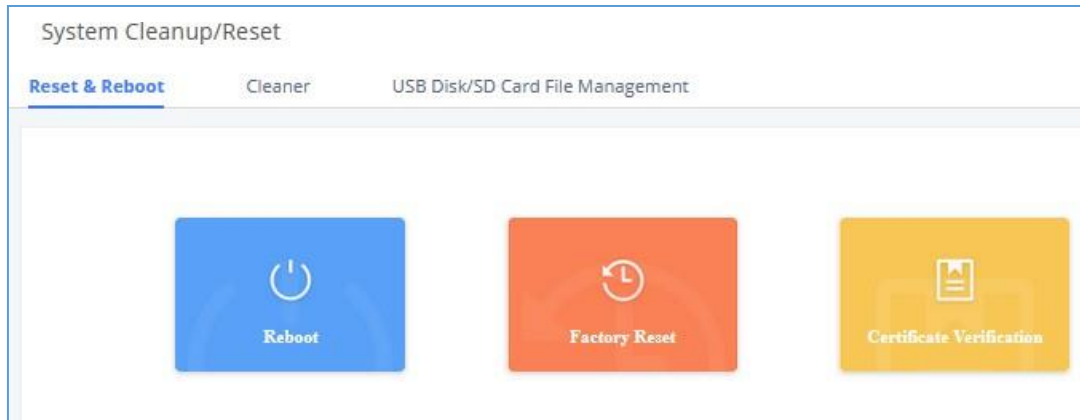

Figure 279: Reset and Reboot

- User can also verify FCM certificate under the same path.

Cleaner

Users could configure to clean the Call Detail Report/Voice Records/Voice Mails etc... manually and automatically under Web GUI→**Maintenance**→**System Cleanup/Reset**→**Cleaner**.

The following screenshot show the settings and parameters to configure the manual cleaner feature on FCM630A.

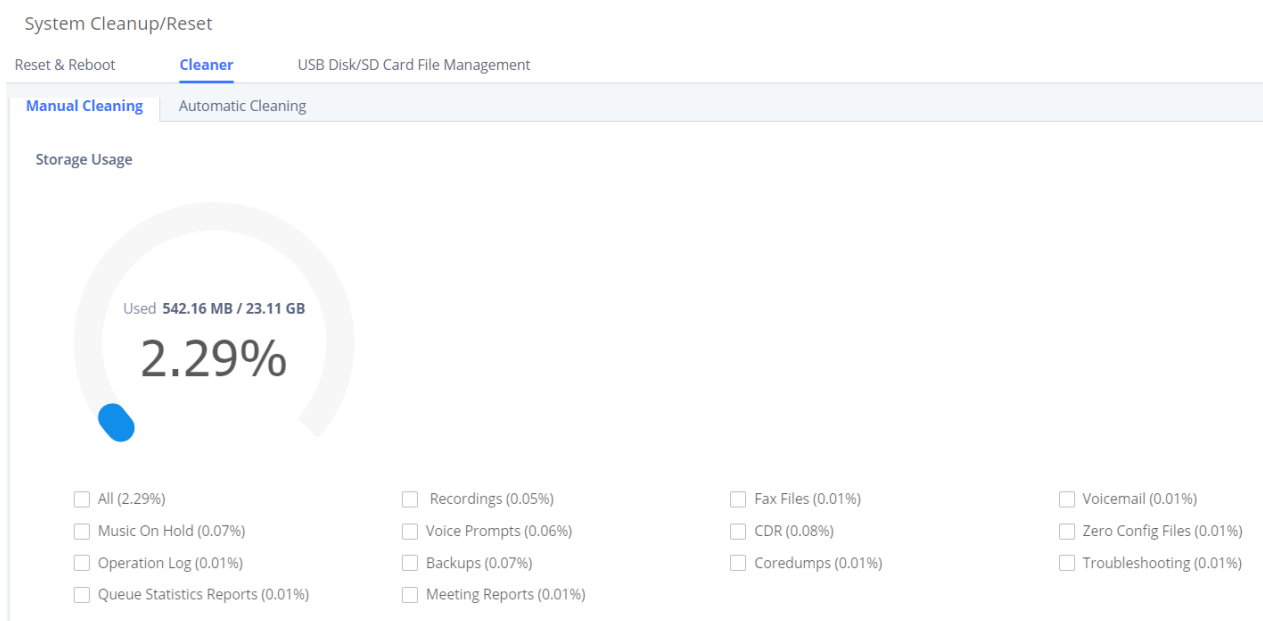

Figure 280: Manual Cleaning

Users can either clean all the data on the FCM or specify the modules to clean such as: Recordings, Fax Files, Voicemail, Music on Hold, Voice Prompts, CDR, ZeroConfig Files, Operation Log, Backups, Coredumps, Troubleshooting, Queue Statistics Reports, Meeting Reports.

User can also set an automatic cleaning under **Cleaner**→**Automatic** Cleaning. The following screenshot showthe settings and parameters to configure the cleaner feature on FCM630A.

Current Path	Displays the current path.
Directory	Select the directory user want to clean.
Delete Selected File	Select multiple entries to delete from USB or SD card.

System Recovery

In some cases (for example after wrong upgrading procedure where the user doesn't follow the correct steps to perform an upgrade) the system may go into some hardware/software issues where the web UI access is lost as well as SSH, in this case the only solution would be to perform a full system recovery in order to reset or update the software version of the device in order to use it again.

1. To access recovery mode on FCM, please follow below steps:
2. Remove the power from the unit and keep the network cable connected.
3. Press using a PIN the reset button and keep holding.
4. Plug back the power supply while maintaining the reset button pressed.
5. Wait for couple of seconds until you hear a click sound.
6. Release the reset button, and the system should display on the LCD a message “Recovery Mode” alongwith an IP address.

Once at this stage, the administrator can access the recovery mode web portal by typing in either the IP0 address (typically WAN) or IP1 address (typically LAN) into a browser address bar.

Make sure to enter the correct admin password, and press login to access the recovery mode page.

Then, the user can either upload a firmware file, factory reset or just reboot the device.

Syslog

On the FCM630A, users could dump the syslog information to a remote server under Web GUI→**Maintenance**→**Syslog**. Enter the syslog server hostname or IP address and select the module/level for the syslog information as well as Process Log Level.

The default syslog level for all modules is "error", which is recommended in your FCM630A settings because it can be helpful to locate the issues when errors happen.

Some typical modules for FCM630A functions are as follows and users can turn on "NOTICE" and "VERBOSE" levels besides "error" level.

- **pbx**: This module is related to general PBX functions.
- **pjsip**: This module is related to SIP calls.

Syslog is usually for debugging and troubleshooting purpose. Turning on all levels for all syslog modules is not recommended for daily usage. Too many syslog prints might cause traffic and affect system performance.

The reserved size for Syslog entries on the cache memory of the FCM is 50M, once this size is reached the FCM will clean up 2M of the oldest Syslog entries to allow to save new logs.

Network Troubleshooting

On the FCM630A, users could capture traces, ping remote host and traceroute remote host for troubleshooting purpose under Web GUI→**Maintenance**→**Network Troubleshooting**.

The following sections shows the steps to capture different types of traffic traces for analysis purposes.

Ethernet Capture

The captured trace can be downloaded for analysis. The instructions or result will be displayed in the Web GUIoutput result.

Network Troubleshooting

Ethernet Capture
IP Ping
Traceroute
Record Meeting for Diagnosis

NTFS is the recommended file system for external storage devices.

Regular Debugging

Capture Type: Ethernet Capture ▼

Interface Type: LAN ▼

Enable SFTP Data Sync:

Capture Filter:

Save to external storage:

▶ Start
⬇ Download

Figure 283: Ethernet Capture

Table 138: Ethernet Capture

Capture Type	Ethernet Capture: Gets a packet capture of all network traffic going through the device.
Interface Type	Select the network interface to monitor.
Enable SFTP Data Sync	Check this box to save the capture files in the SFTP server. Please make sure the configuration of data synchronization works before.

Storage to External Device	Check this box to activate storage of the capture either on the USB or SD Card.
Capture Filter	Enter the filter to obtain the specific types of traffic, such as (host, src, dst, net, proto...).
Save to external storage	Save to external storage
Start	Click to start the trace.
Stop	Click to stop the trace.
Download	Click to download the trace if trace is stored locally.
Enable SRTP Debugging	Check this box to troubleshoot calls encrypted with TLS/SRTP.

The output result is in .pcap format. Therefore, users could specify the capture filter as used in general networktraffic capture tool (host, src, dst, net, protocol, port, port range) before starting to capture the trace.

Note: Capture files saved on external devices will now have "capture" prepended to file names.

IP Ping

Enter the target host in host name or IP address. Then press "Start" button. The output result will dynamicallydisplay in the window below.

Network Troubleshooting

Ethernet Capture **IP Ping** Traceroute Record Meeting for Diagnosis

* Target Host:

▶ Start

Output Result

```
Dignostic run
PING 192.168.5.220 (192.168.5.220) 56(84) bytes of data.
64 bytes from 192.168.5.220: icmp_seq=1 ttl=128 time=0.780 ms
64 bytes from 192.168.5.220: icmp_seq=2 ttl=128 time=0.995 ms
Done
```

Figure 284: Ping

Traceroute

Enter the target host in host name or IP address. Then press "Start" button. The output result will dynamically display in the window below.

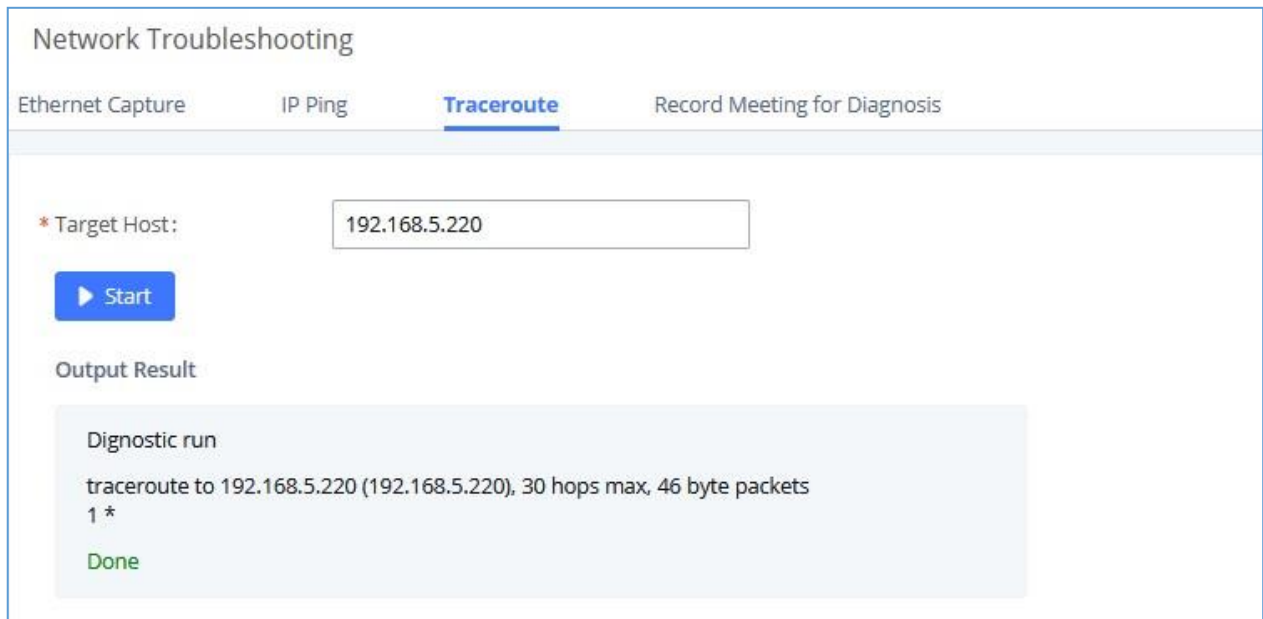

Figure 285: Traceroute

Record Meeting for Diagnosis

Enter the target meeting, support the ongoing meeting, and then click the "Start" button to capture the recording diagnosis of the meeting members in progress. The output result will be automatically displayed below, click the "download" button to download to the local. After the download is complete, immediately click the "Delete" button to clear the system content.

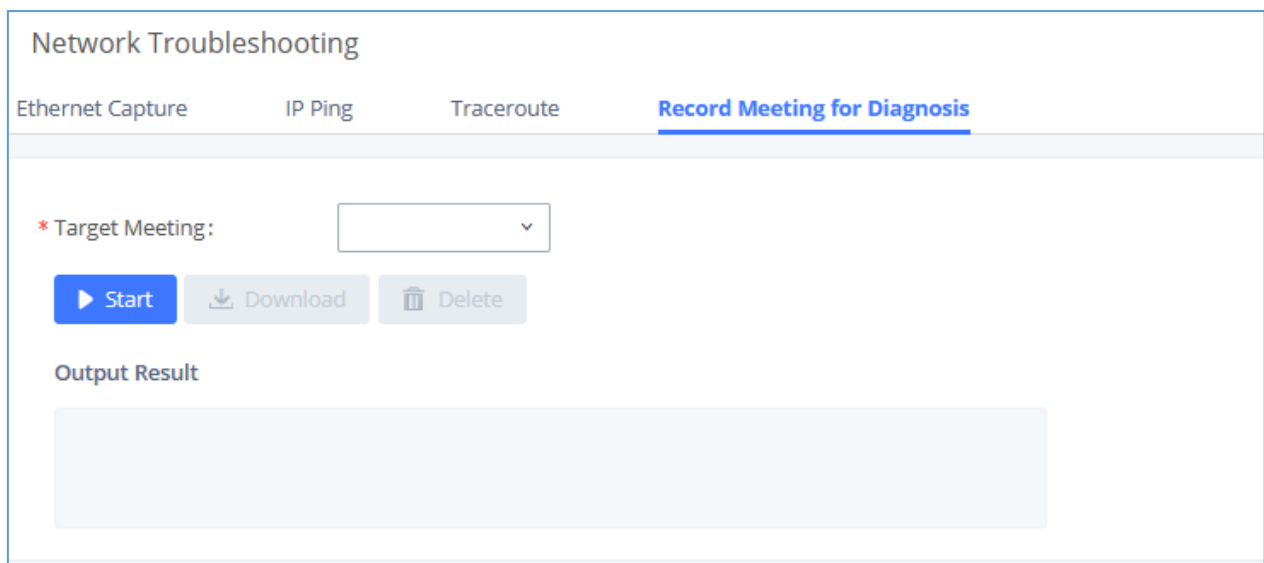

Figure 286: Record Meeting for Diagnosis

Service Check

Enable Service Check to periodically check FCM630A. Check Cycle is configurable in seconds and the default setting is 60 sec. Check Times is the maximum number of failed checks before restart the FCM630A. The default setting is 3. If there is no response from FCM630A after 3 attempts (default) to check, current status will be stored and the internal service in FCM630A will be restarted.

Service Check

Enable Server Check:

* Check Cycle:

* Check times:

Figure 287: Service Check

Network Status

In FCM630A Web GUI→**System Status**→**Network Status**, the users can view active Internet connections. This information can be used to troubleshoot connection issue between FCM630A and other services.

Network Status					
<u>Active Connections</u> Active Unix Domain Sockets					
PROTO	RECV-Q	SEND-Q	LOCAL-ADDRESS	FOREIGN-ADDRESS	STATE
tcp	0	0	0.0.0.0:7681	0.0.0.0:*	LISTEN

EXPERIENCING THE FCM630A SERIES IP PBX

Please visit our website: <https://www.fiberme.com/support> to receive the most up- to-date updates on firmware releases, additional features, FAQs, documentation and news on new products.

Our technical support staff is trained and ready to answer all of your questions. Contact a technical support member or [submit a trouble ticket online](#) to receive in-depth support.

Thank you again for purchasing FIBERME FCM630A series IP PBX appliance, it will be sure to bring convenience and color to both your business and personal life.
